In proceeding to refer to the exhibits shown, Mr. Simnett commented upon the changes which the last decade had brought, as evidenced by what they saw that evening—the improved attitude, due to the good offices of the L.M.P.A., that had led printers to help one another; and the improved style now shown in specimens of printing, the beauties of simplicity and purity having taken the place of the florid design and clash of types common ten years ago. Their exhibition showed, he said, that printers in East London had lifted their craft up to a very high level; they were evidently getting away from the style of the ghastly typographical productions of the Victorian era and making for such printing as people would delight to take up and read. He congratulated them on the specimens their members had submitted.

All the exhibits were next officially inspected for the choosing of examples to go forward to the Inter-District Competition, Mr. Simnett contributing an interesting running commentary upon points of design and execution noted in the examples examined.

At the close of the proceedings Mr. Simnett was very heartily thanked for his visit to East London.

TENDER.

Willesden Urban District Council.

THE above Council invite tenders for the printing of their Agenda, Committee Reports and Minutes and other stock forms for all Departments of the Council, including the Education Committee, for the period ending 31st March, 1926.

Tender forms can be obtained on and after Monday, 30th March, 1925, and samples inspected at the undermentioned address between the hours of 10 a.m. and 4 p.m., except Saturdays.

Tenders to be delivered to the undersigned not later than Saturday, the 11th April, 1925, endorsed "Tender for printing."

The Council reserve to themselves the right to accept the whole or part of any tender and need not necessarily accept the lowest or any tender.

E. A. PRATT,
Clerk of the Council.

Clerk's Department,
Town Hall,
Dyne Road, Kilburn, N.W.6.
27th March, 1925.

SALE BY AUCTION.

ST. PETER'S SQUARE, HEREFORD.

VALUABLE AND EXTENSIVE NEWSPAPER AND JOBBING PLANT AND MACHINERY comprising:—

A 44" SINGLE REEL TWO PAGE WIDE ROTARY NEWSPAPER PRESS by R. Hoe & Co., with half page folder, cut off 20¾" will print 4 page paper at a speed of 24,000 per hour or 8 and 16 pages at 12,000 per hour complete with Stereo Plant. Quad Royal Dawson Two Feeder. Quad Royal Wharfedale by Furnival. Double Demy and Demy Wharfedales with geared inkers by Bremner Machine Co., Ltd., Crown Folio Falcon Safety Platen, Foolscap Folio Arab Platen. Foolscap Folio Cropper. ONE MODEL 4 LINOTYPE No. 6584. 3 MODEL 1 LINOTYPES No. 5138, 3027 and 2721. 10 Tons of Type. 5 Tons Stereo and Lino Metal. 400 Founts Wood Letter. 200 Chases, 130 Galleys, 7 imposing Surfaces, Portable ditto, Royal and Crown Folio Albion Press, Lever Galley Press, Casting Box, Steam Drying Press 32" Stereo Mangle, 36" Furnival Self Clamp Guillotine, 20" Treadle Perforator, Wire Stitcher, Hand Cornering Machine, 2 Numbering Machines, Goerz Camera, Lanchester Enlarger, 15 H.P., 10 H.P. and 1 H.P. Stock of Paper, Inks etc. which will be sold by Auction by Mr.

ROBERT H. RUDDOCK

on the premises as above on Thursday 2nd April, 1925 at one o'clock.

On view day prior and morning of Sale and Catalogues of the Auctioneer, 71, Fleet St., London, E.C.4.

Paper Trade of India.

Position of the United Kingdom.

A report by H.M. Trade Commissioner at Calcutta (Mr. D. M. Clarke) gives an account of the paper trade during the nine months ended December, 1924. Incidentally it is mentioned that imports of paper mill machinery were of the value of 6 lakhs of rupees, comparing with 4½ lakhs in the corresponding period of 1923.

With regard to paper and pasteboard the total value of this trade increased from Rs. 199½ lakhs to Rs. 230 lakhs. Details of the principal items are given as follows:

Printing Paper.—Here also an expansion in the total trade from Rs. 63½ lakhs to Rs. 92 lakhs is recorded. Shipments from the United Kingdom rose from Rs. 21 lakhs to Rs. 24 lakhs. Other increases were: Norway Rs. 15½ lakhs to Rs. 17 lakhs, Germany from Rs. 15 lakhs to Rs 29 lakhs, Netherlands from Rs 2½ lakhs to Rs. 6½ lakhs, Austria from Rs. 3 lakhs to Rs. 5½ lakhs. Imports from Belgium were about stationary at Rs. 5½ lakhs, while imports from Sweden declined from Rs. 3 lakhs to Rs. 2½ lakhs.

Writing Paper and Envelopes.—The total trade remained stationary at Rs. 40½ lakhs. The share of the United Kingdom fell from Rs. 27½ lakhs to Rs. 24½ lakhs.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion **3/0**
Three Insertions **6/0**

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion **1/6**
Three Insertions **3/0**

For every line exceeding three lines **6d**

Sales by Auction, Tenders,
Patents for Sale,

The Lock-Out and Strike.

IT is very gratifying to learn as we go to press that the Joint Industrial Council has again come into its own and is functioning to restore peace to the printing and binding trades. At the time of writing, all parties are meeting under the auspices of the J.I.C. Conciliation Committee, and everyone is hopeful that the day will bring a settlement acceptable to all parties. Much more satisfactory than pacification through the efforts of agencies outside the industry is a settlement reached through our own J.I.C. If the Council is successful in the present difficult situation, another step will have been made towards the rationalising and stabilising of industrial relations in the printing trade—to the benefit of all concerned therein.

* * *

Standardising Paper Products.

THERE is scope for the enterprising manufacturer who will boldly and efficiently plan to standardise his product on definite lines. In recent years, says a writer in *The Times* (Trade Supplement), we have seen the policy successfully adopted in various ways. In one case tinted papers were converted into a proprietary speciality; in another a wrapping mill turned its attention to cover papers; in another a mill decided to eliminate a large part of its manufacture, which involved the storage of heavy miscellaneous stocks. Then there is the alternative example of a mill specialising on heavy mixed stock, with a policy of selling any amount and any size cut to requirement. Something has been done, therefore, by certain manufacturers who believe in the possibilities inherent in standardisation and specialisation. Much more remains to be done by the whole industry along these lines, just as, in the very same way, there is scope for improvement in the branding of paper.

The Printing Trade Crisis.

Prospects of Settlement.

Although at the time of writing (Wednesday morning) the Paper Workers' strike has been allowed to take effect and some 10,000 workpeople are added to the number affected by the binding trade dispute, the position is now very hopeful, there being prospects that before this issue is in our readers' hands the parties will—through the good offices of the Joint Industrial Council—have reached a settlement permitting the resumption of work.

The events of the past week, whilst there were hopeful features, have kept the printing and allied trades under a dark cloud of threatened widespread stoppage of business.

On the evening of Wednesday of last week the Union held a crowded meeting at the Kingsway Hall, where, it is understood, strong strike feeling was displayed. On Thursday the Council of the London Master Printers' Association met to consider the position and it was stated that the employers took the view that this was not a dispute about wages, but that the issue involved was one of vital importance to all industrial negotiations, namely the authority of the J.I.C., and that the employers were not prepared to resume negotiations until normal conditions had been restored.

Friday evening brought into effect the lock-out by the Master Bookbinders' Association of some 5,000 members of the Union in London binderies. A gleam of hope was, however, thrown on the situation by the fact that during Friday a deputation from the London Printing and Kindred Trades Federation waited on the Emergency Labour Committee of the Federation of Master Printers to inquire about the position of the members of the other unions. The deputation was informed that no instructions had been issued for employers to tender lock-out notices to the members of other unions, but that it was obvious that when the workers in the paper warehouse and binding departments ceased work on Tuesday many establishments could not find work for their compositors and printers.

Both parties to the dispute let it be known that they were not averse to meeting under the auspices of the Ministry of Labour with a view to the resumption of negotiations, but against this was the consideration that it was undesirable that the Joint Industrial Council should be superseded.

In the House of Commons on Monday Mr. J. M. M. Erskine and Mr. T. E. Naylor questioned the Minister of Labour on the matter, and were told that the Ministry were in touch with the parties and would render any service required. Tuesday brought renewed efforts on every hand to find some means of rapprochement, as it was the eve of the coming into effect of the strike notices tendered by the Union to the London Master Printers' Hssociation and calculated to add some 10,000 additional workers to the number umemployed.

The story of the origin of the dispute will have been read in our last issue and many times over in the daily Press. In regard to the charge against the Union that it acted unconstitutionally, Mr. T. G. Newland, the secretary of the Union, has stated that negotiations were broken off before the men employed by the Greycaine Book Manufacturing Co., of Highbury, tendered notices. The employers, however, contradict the statement.

At a late hour on Tuesday evening the following agreed statement was issued by the joint secretaries of the Joint Industrial Council for the industry, Mr. A. E. Goodwin, secretary of the Federation of Master Printers, and Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation: "Throughout the day the officials of the Joint Industrial Council of the printing and allied trades have been in touch with all parties concerned in the dispute in the printing and binding industry. The representatives of the Joint Industrial Council urged that all parties should again meet under the auspices of the Conciliation Committee of the Council tomorrow morning in the hope of being able to settle satisfactorily the dispute, and arrangements have been made accordingly."

MESSRS. W. W. LEE AND CO., printers and bookbinders, of 17A, South Castle-street, Liverpool, with works at 24, Cable street, Liverpool, are amongst new members of the Federation of British Industries.

Lithographers' Auxiliary.

Presentation to Mr. Mynott.

There was a very large gathering at the last concert of the season of the Lithographers' Auxiliary on Friday at the Cannon street Hotel, the chair being occupied by Mr. C. H. Crabtree, chairman and managing director of Messrs. R. W. Crabtree and Sons, Ltd. The concert was again under the able direction of Mr. W. Herring, and the results of his efforts resulted in the presentation of a first-class musical programme. During the course of the evening a well-deserved tribute was paid to Mr. J. Mynott, the popular secretary of the Auxiliary, who was presented at the hands of

Mr. J. Mynott.

Mr. C. W. Bowerman, M.P., with an illuminated address accompanied by a handsome gold watch and chain. Mr. Andrew Spottiswoode, the president of the Auxiliary, who was unable to be present owing to indisposition, sent a letter from Folkestone expressing regret at his absence. As regards the excellent financial results accruing from the chairman's

Misses Seagrove and Evans.

efforts considerable satisfaction was expressed, the amount of the plate representing £160.

Those present included: Right Hon. C. W. Bowerman, M.P., and Messrs. Joseph Mortimer (secretary, Printers' Pension Corporation), Frederic T. Corkett, A. B. Evans, Woodgate Stevens, J. E. Reeve. E. A. Lowe (chairman of committee), E. A. Mullins, J. Garner, J. A. J. Mackenzie, Sydney Cumbers, J. Sampson, F. J. Bold, J. H. Butler, W. T. Bell, W. E. Field, H. V. Pointon, S. W. Jordan, J. T. Riches (Government Printer of Zanzibar), B. Gomersal and J. Mynott (Auxiliary secretary).

The Chairman's Remarks.

During an interval in the programme, the chairman took the opportunity of paying a tribute to the work of the Printers' Pension Corporation. He went on to say that it gave him the greatest possible pleasure to be given the opportunity of doing something to help what he described as a very wonderful institution. The organisation was founded nearly one hundred years ago, and he believed the subscriptions announced at the annual festival dinners year after year showed that it was meeting with ever-increasing generosity and support. After briefly touching on the excellent idea suggested by the "Oldest Unsuccessful Pension," Mr. Crabtree remarked that his trade (the engineers) had no such institution as the Printers' Pension Corporation. He wished it had. In concluding, he expressed his deep appreciation to all who had co-operated with him in the evening's efforts.

The Presentation.

Mr. Bowerman, on behalf of the committee, then handed the gifts to Mr. Mynott. It was perfectly true, he said, that the Printers' Pension Corporation was the most wonderful institution of its kind in the world, and it was to be regretted that other trades had not followed the example set by the printing trade nearly one hundred years ago. Mr. Bowerman then went on to pay a tribute to the excellent work rendered to the Auxiliary by Mr. J. Mynott, whom he described as one of the most retiring men in the lithographic section of the industry. Mr. Mynott had been secretary of the Auxiliary for a period of fourteen years, and during that time it had collected by means of concerts and in other ways a sum of nearly £4,000. That, he considered, was a very notable performance.

Mr. Mynott, in returning thanks for the gifts, alluded warmly to the co-operation and the splendid services rendered by the Auxiliary committee, and the ladies and gentlemen who had so well supported them during the many years that had passed. Whilst he gave great praise to all these, he was anxious about the work of the Auxiliary in the future, and he hoped that many of the younger men in the industry would come forward to carry it on.

The gratitude of those present to Mr. Crabtree for the magnificent result of his efforts, and to Mr. Herring and the artistes was expressed in an appropriately worded vote of thanks by Mr. Woodgate Stevens.

The Concert Artistes.

A very pleasing feature in an excellent programme was the dancing and singing of the pretty little Misses Seagrove and Evans, the latter (the younger) being a daughter of Mr. A. B. Evans (a director of Messrs. Crabtree's). Other artistes were Miss Ethel Deal, Miss Constance Bonne, and Messrs. Richard Reader, Dan Stanley, George Foster, Albert C. Steer, Charles Harris, Mr. Chaas Lewis, and Miss Helen George, L.L.C.M. (accompanist).

A successful evening was brought to a close by the singing of the National Anthem.

The Hendon Paper Works Co., Ltd., Sunderland, have appointed Messrs. Corke, Sons and Co., 14, New Bridge-street, London, E.C., as their agents for London.

The Making of a Book.

Norwich J.I.C Lecture.

The third of the series of lectures arranged by the Norwich Printers' Joint Industrial Council was held at the Norwich Central Public Library on Thursday last, when the City Librarian (Mr. Geo. A Stephen, the author of "Commercial Bookbinding" and other works) gave a lecture on "The Making of a Modern Book." The lecture was illustrated by about a hundred lantern slides and exhibits. The latter included raw materials and pulp for papermaking, specimens of linotype and monotype printing, a collection of illustrations grouped according to the processes—line, half-tone, three and four colour work, photogravure and collotype—and a collection of decorative title-pages, end-papers, bookcovers, and book-jackets, designed by artists of repute.

Mr. F. S. Deyns Page, the president of the Norwich and District Master Printers' Association, presided.

Mr. Stephen said that Mr. Walter Crane, whose name was indelibly associated with the arts and crafts movement, had described the 19th century as a machine-made century. From the point of view of industry a machine-made century it truly was. In the book world, within the last three or four decades the mechanical talent of both hemispheres had created ingenious machines for nearly every process in the making of books, a rapid description of which he gave. First he outlined the processes of papermaking, from the felling of trees to the reeling of paper in huge rolls.

Mr. Stephen drew particular attention to the interim report of the Library Association's Book Production Committee, which was established as an Advisory Co nmittee to deal with everything connected with the production of books from a bibliographical and technical point of view. The scope of the inquiry covered printing, illustrations, paper, bindings as used by publishers, and bibliographical details of the arrangement of the contents of the book. The different kinds of decorative title-pages were explained and illustrated, and the desirable proportioning of the margins of the printed pages was illustrated by diagrams.

Passing to the binding of the books, the numerous processes, almost entirely executed by machinery in up-to-date binderies, were described and illustrated by slides of machines and of binderies.

In conclusion, the lecturer referred to Messrs. Thomas Nelson and Sons' book factory at Edinburgh, which, he said, was the most up-to-date of its kind in Great Britain.

On the proposition of Mr. Page, the lecturer was accorded a hearty vote of thanks.

Messrs Anderson & Burgess, paper agents, of 48, Dundas-street, Glasgow, have recently opened a branch office in Manchester, at 34, George street, of which Mr. Anderson is taking charge. The firm are the sole agents for the Hylte and Munkedal Paper Mills, Sweden, in the North of England, Scotland and the North of Ireland, and also represent Messrs. J. Lovell and Sons, Ltd., Linlithgow.

WELLINGTON PRINTERS, LTD. (London).—Particulars filed of £5,500 debentures authorised March 3rd, 1925, charged on the company's undertaking and property, present and future, including uncalled capital and book debts, the whole amount being now issued.

PATERNOSTER PRINTING CO., LTD (Ponder's End).—Satisfaction in full on August 6th, 1924, of mortgage dated April 18th, 1921, securing £300.

CALENDAR PRESS, LTD. (London).—Debenture dated March 11th, 1925, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: E. E. Wishart, Wilbury Lawn, Hove.

E. BARTLETT AND SONS, LTD. (printers, papermakers, wholesale stationers, etc., Bristol)—Issue on December 3rd, 1923, of £750 debentures part of a series already registered. (Notice filed March 12th, 1925).

BASIL BLACKWELL AND MOTT, LTD. (newspaper proprietors, etc.).—Mortgage on certain property at Oxford dated March 2nd, 1925. to secure all moneys due or to become due from the company to the Westminster Bank, Ltd.

ENGINEERING REVIEW CO., LTD. (London).—Particulars filed of £1,000 debentures authorised February 27th, 1925, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

RECEIVER APPOINTED OR RELEASED.

DEVONSHIRE PRESS, LTD. (London).—H. Bugbird, of Brook House, 10-12, Walbrook, E.C.4, ceased to act as receiver or manager on March 17th, 1925.

MERTON BOARD MILL, LTD. (Merton, S.W.)—E. Portlock, of 186, Bishopsgate, E.C., was appointed receiver and manager by Order of Court, dated March 10th, 1925.

LISTER, EVANS AND CO., LTD. (manufacturing stationers, etc., Hull).—J. Thorp, of 89, Argyle-street, Hull, ceased to act as receiver or manager on March 12th, 1925.

G. ALDER AND CO., LTD (paper agents, etc, London).—A. F. Sharp, of 14, Grays Inn-square, W.C.1, ceased to act as receiver or manager on March 11th, 1925.

FRENKELS (1922), LTD. (advertising contractors, etc., London).—A. R. K. Farlow, of 50, Gresham-street, E.C., ceased to act as receiver on March 12th, 1925.

BANKRUPTCIES, etc.

Re RAMSON AND CO., LTD., printers and stationers, 16, Laurence Pountney-lane, E.C.—Under a compulsory winding-up order made against this company last October on a creditor's petition, accounts have been lodged showing unsecured liabilities £955, assets valued at £134, and a deficiency of £1,821 with regard to contributories, the issued capital being 500 ordinary and 500 preference shares, all of £1 each. Mr. G. D. Pepys, official receiver and liquidator, reports that the company was registered in March, 1919, with a nominal capital of £2,000, and was formed to acquire for £500, in shares, the connection and goodwill of a business then being carried on by Albert Wm. Ramson. The company made a net loss every year, with the exception of that ended March 31st, 1921, when a small net profit was made. The failure is attributed by Mrs. Ramson to depression in trade which commenced towards the end of 1922, and to insufficient working capital. The official receiver concludes by pointing out that on August 18th, 1924, the company received an amount of £725 10s. 3d. in respect of sales, out of which it paid £350 in respect of commission and £200 for goods supplied. Practically the whole of the balance was drawn by Mr. Ramson in respect of salary. The circumstances under which these payments were made just before the presentation of the winding up petition are receiving further consideration.

Re WOMEN PUBLISHERS, LTD.—A report of the meetings of creditors and shareholders held on the 12th inst. was included in our last week's issue. Mr. Pepys, Assistant Official Receiver, who presided, enquired whether certain of the directors of the company, particularly Miss Gates and Lady Aberdeen were present. Lady Aberdeen was thought to be in Scotland and the whereabouts of Miss Gates were unknown. The Official Receiver said it was the duty of the company's directors to attend the meeting of creditors and give assistance in investigation of the company's affairs, which, at present, were incomplete. It appears the control of the company was largely in the hands of Miss Gates, with the assistance of Dr. Luboff, and a net loss was shown on the trading of £6,351 in addition to overhead charges. He was of opinion that the validity of the debenture (representing £1,000) could not be challenged, and on his invitation Mr. Fincham, the receiver for the debenture holder, stated that he had realised the sum of £1,136 and had made payments to the extent of £386, leaving a nett sum of £750 in his hands available for the debenture holder, subject to costs and the receiver's remuneration. He had failed to realise the copyrights belonging to the company, and in his opinion there would not be sufficient to discharge the debenture debt and interest and the costs and charges in connection with the receivership in full; therefore, there could be no division for the unsecured creditors. The matter was left in the hands of the official receiver to continue as liquidator.

Suckling and Co.

A sitting of the London Bankruptcy Court was held on March 17th for the public examination of Edward John Suckling, paper merchant, carrying on business at Royal London House, Finsbury square, E.C., under the style of Suckling and Co. The debtor filed his own petition last March and subsequently lodged accounts showing total liabilities £14,088 (unsecured £12,388) and net assets valued at £3,850, after deducting £1,033 for payment of the preferential claims.

Replying to Mr. D. Williams, official receiver, the debtor stated that in 1911 he became manager to his father, who then carried on a printing business as Suckling and Co., at 8A, City-road, E.C. On the death of his father in 1915, witness became entitled to the business on terms that he paid a legacy of £400 to his mother, and gave her one-half of the profits after he had drawn £400 per annum as salary. The business consisted of obtaining orders and placing them with various firms for execution, in other words, "subcontracting." The chief people with whom the orders were placed were Philip John & Co., Ltd., of Worship-street, E.C. In 1916 witness decided to open a business as a wholesale paper merchant, and for that purpose took premises at Royal London House, Finsbury circus, where he afterwards traded as Suckling and Co.

The debtor was questioned in relation to certain expenses and payments and eventually the examination was concluded.

The L.S.C. Jobbing Guild.

Mr. W. G. Tucker on "Layouts."

The March meeting of the London Society of Compositors' Jobbing Guild was held in the L.S.C. Board Room on Wednesday of last week, with Mr. W. M. Bower (advertising manager of Messrs. Linotype and Machinery Limited) in the chair, and the proceedings proved of great interest.

After being suitably introduced by the chairman, Mr. W. G. Tucker (sales manager, Messrs. Spottiswoode, Ballantyne and Co., Ltd.) proceeded to deliver an address entitled "A Talk About Layouts," and the value of his remarks was enhanced by the displaying of actual examples of printing work that had gone through the printery with which he is connected. These were extremely instructive, as they showed the progress of the job through the stages of the roughout, the finished layout for the customer, the layout for the composing-room, and, finally, the finished product. The methods by which ideas were sometimes hit upon, or improvements made on original ideas for printed matter, were ably demonstrated by Mr. Tucker with the aid of coloured chalks, as were also many points relating to the construction and balance of a job, with special reference to running heads, choice of types, margins and decoration. The many examples which he had brought with him were passed round the room for general examination. Some of these were of exceptional interest, as, for instance, three specimens of Italian watermarked hand-made paper (made by Pietro, Liani, Fabriano), in which the watermark reproduced actual photographs—showing the extent to which customers will sometimes go in considering the important question of the effect of paper as a factor in the finished job.

At the conclusion of Mr. Tucker's address the chairman commented on several of the points touched upon and threw the meeting open for questions and discussion. This part of the meeting also proved very instructive, a number of those present taking part, and the proceedings continuing to a late hour.

The vote of thanks to Mr. Tucker was proposed by Mr. H. B. Naylor (hon. sec. of the Guild) and seconded by Mr. E. J. Davey.

Mr. Bower was thanked for his services in the chair on the proposition of Mr. G. Papworth, seconded by Mr. C. Dee.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The monthly meeting of the above Association was held on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C., when Mr. A. Chadwell (president) presided over a moderately good attendance of the members.

After the reading of the minutes the meeting proceeded to the election of Mr. Howard Williams as an honorary member of the Association. Mr. Howard Williams, who is a son of Mr. Harry Williams, of the firm of H. Williams and Son, was unanimously elected.

Mr. Bullett (secretary) informed the meeting of the illness of Mr. Latimer (Hazell, Watson and Viney), who was at present convalescing at Clacton-on Sea. The secretary was then instructed to convey to Mr. Latimer the members' wishes for his speedy and complete recovery to health and strength again.

The secretary also informed the meeting of the recent illness of Mr. W. M. Forsyth, who had made satisfactory progress from a recent operation.

The meeting next turned its attention to the consideration of the official visit the Association is paying to the Printing Exhibition at the Agricultural Hall on May 25th. In order to ensure the success of this event the president appealed to the members to give it their full support.

Mr. J. S. Sunderland suggested that the Association might be made more useful to the members next season by securing lecturers on each of their meeting nights instead of only periodically as at present.

Mr. Bullett agreed with the suggestion, but thought that it was not giving much encouragement to a speaker to ask him to come along to a small attendance of the members as had so frequently happened.

Printers' Managers and Overseers

ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE

At the March meeting, held in the Mitre Hotel, Manchester, President Frank Scouler had the support of a large gathering of members.

After the passing of the minutes and the roll call, Mr. Charles Robert Mason, overseer, letterpress machine room, Messrs. Jesse Broad and Co., Ltd., was admitted to membership.

The usual routine business being over, Mr. Frank Heywood (Messrs. Geo. Mann and Co., Ltd.), lectured on "The Evolution of Offset Machinery, together with Observations on the Process," and by the aid of a lantern efficiently operated by Messrs. E. Garrett and Jas. E. Mayo, he was able to demonstrate the gradual growth of offset printing until it has become a keen rival to the letterpress printer.

In the discussion which followed, Messrs. E. Garrett, J. Winstanley, F. Scouler, F. J. Hughes, A. J. Gyngell, and several others took part.

The Passing of Ex-President Fred. E. Robinson.

One month ago the members of the Manchester Centre had the pleasure of honouring their ex-president, and an enjoyable evening is was. On the Saturday following, February 28th, he attended the Birmingham dinner along with his wife, Mr. Frank Scouler (president), and Mrs. Scouler, and Mr. F. J. Hughes (secretary). The Birmingham friends provided a good dinner and an excellent concert, and at the close all went to their respective places of rest, being thoroughly satisfied. During the night Mr. Fred. Robinson was attacked by "flu," and during the following week other symptoms of human weakness intervened, and so weakened him that he passed away on March 17th. On Saturday last he was laid to rest in Cheetham Hill Cemetery amid a large gathering of friends, among whom, besides the family, were General Secretary E. W. Whittle (London); President Frank Scouler (Manchester); Messrs. J. E. Wall (president), Jas. N. Poole (secretary), Chas. Mackie (ex-president), Liverpool Centre; W. T. Broughton (ex-president), P. T. Austin, Birmingham Centre; W. H. Crane (president, Leicester Centre); Albert Helliwell (vice-president, Manchester Centre). Mr. R. H. Berry (president, London), and the Yorkshire Centre sent wreaths. The Association has lost one who was ever ready to lend a helping hand to those in need, never counting the cost. The Association is the poorer by his death, and the members have lost a real good friend who was one of nature's gentlemen.

Wee Mac.

The Printing Crafts Guild.

Unpropitious weather and the clash of two special craft functions robbed the attendance of members in the College of Technology, Manchester, when Mr. C. L. Stern, of Messrs. Linotype and Machinery Limited, lectured on "Printing Machinery." Having had a unique and universal experience of all classes of printing machines under varying conditions, the lecturer fully explained the practical methods as well as the systems adopted by eccentric pressmen. Having all things perfect—press, type, packing, etc.—he said it was impossible to do good printing, as a certain amount of pressure had to be used, thus making printing one of the most unscientific callings existing. He advocated building up to packing, and on no account building down. Some of his hearers received a shock when he stated that rollers should be changed four or five times a year. If the printer desired to work cleaner and sharper, and these changes would compensate the house in make ready, ink, and better work, as unsuitable rollers failed to give proper distribution. Mr. Stern suggested testing the rollers on the ink slab each morning before starting up for the day's run to see if they were running true. He advised those who had never used a rubber blanket to try one and they would be able to do better illustration and colour work. Hard packing was something that the average machineman did not understand, many of them doing a great deal of harm to both the machines and the formes, some having preposterous ideas of what really was meant by hard packing. With a good solid base and a rubber blanket buried between the cylinder and the impression surface there should not be much time wasted in the make-ready operation. He (the lecturer) would eliminate all wood from the press room owing to its unreliability.

In the discussion which followed Mr. Webb said he thought printers changed their rollers every four years, instead of four times annually. Amongst other speakers were President John Taylor and Mr. F. J. Hughes.

A vote of thanks to Mr. Stern concluded the meeting.

Wee Mac.

"The Master Printers' Annual and Typographical Year Book, 1925." Edited by R. A. Austen-Leigh and Gerard T. Meynell. London: Spottiswoode, Ballantyne and Co., Ltd. Demy 8vo.; pp. vii. + 502 + 60.

The new issue of this indispensable work of reference is the sixth that has appeared. It bears evidence of having been brought up to date, and moreover has a couple of new features of interest, namely, a short section "Printing History: 1860-1900," listing a large number of notable events that occurred during that period, and three pages enumerating "A few of the Chief Printing Technical Schools." The historical section of last year's edition—dealing with the negotiations of the London Printing Trade from 1785 to 1915—is omitted. The portraits this year—and excellent portraits they are—are of Mr. W. B. Wykes, president of the Federation of Master Printers, and Mr. E. G. Arnold, LL.D., chairman of the Public Contracts and Legislation Committee and past president of the Federation. As usual, about one-third of the volume is devoted to a useful directory of the member-firms and the office bearers of the Federation of Master Printers throughout Great Britain and Ireland, whilst the section setting forth the many agreements made between employers and workpeople is again a substantial one. There are the usual features of "Who's Who," legal section, tables of reference data, etc., the whole making a valuable compendium of information, of which employing printers everywhere should not fail to possess themselves. By way of a word of criticism, it might be mentioned that we have on several occasions consulted the index in vain: there is no entry under "L" to indicate that the volume contains anything relating to the lithographic side of the trade, nothing under "C" to guide one to information on copyright, and so on. The book would be much improved if the index were considerably extended. At the same time we suggest that a disuse of massed capitals for index entries would mean a gain in legibility, in convenience and in appearance. The price of the volume is 12s. 6d. net, or 13s. 6d. by post.

"The Newspaper Press Directory," 1925. London: C. Mitchell and Co., Ltd., 1 and 2, Snow-hill, E.C.1. Crown quarto, pp. 500 + 170.

The present is the 80th annual issue of this well-known guide to the Press, and it forms a comprehensive and most valuable index for the use of all who have to do with the newspapers, magazines, reviews and periodicals published in Great Britain and Ireland, the overseas Dominions, the Indian Empire, the Continent of Europe, America and the Far East. In respect of these publications the information supplied is calculated to be of value to advertisers seeking suitable media and to all who require to know the nature, interests, territory, publishing arrangements, etc., of the journals mentioned. There is presented with the volume a large newspaper map of Great Britain and Ireland, and the book includes a special article on "Empire Building at Wembley" (by Lieut.-Gen. Sir Travers Clarke), and others on "Things that matter in Advertising," "The Trend of the Modern Press," and "The Legal Year in its relation to the Press." Well produced, in serviceable cloth boards, it is wonderfully good value for its price of 5s.

The late Mr. John Fergusson (55), of Sale, Cheshire, for 25 years on the editorial staff of the *Manchester Evening News*, left £3,934 (net personalty, £3,616).

Lloyd Memorial (Caxton) Home.

Flats for Retired Printers.

In aid of the latest charitable effort set on foot in connection with that well-managed institution, the Lloyd Memorial (Caxton) Seaside Home—the provision of self-contained flats for retired printers—a banquet was very successfully held on Saturday at the Hotel Cecil. Viscount Hambleden presided over a large gathering representative of the printing and allied trades.

Lord Hambleden, in proposing "Success to the Home," said the institution had long since passed the time of experiment. It was, in fact, a very great success, and he would be a bold man who would prophesy what development rested in the future. He could look back to the time thirty years ago when he went down to St. Margaret's Bay to open a new wing of the home as it then existed. Some sixteen years later the home was moved to Deal. It was interesting to know that, whereas the wing which was opened in 1895 provided accommodation for twelve beds, they had now a great organisation at Deal which provided accommodation for 200 beds. More recent developments had taken place. In 1910 the subscriptions amounted to £490, and the total property to no more than £1,271. Last year the subscriptions were no less than £9,500, while the total property was now approaching £39,000. Some 20,000 members of the trade subscribed to the institution. It was now proposed to substitute for certain cottages a row of self-contained flats for retired and aged members of the craft. He did not suppose it would be possible to erect the flats for less than £400 or £500 each, and they would realise that anything like a commercial rent would amount to something like 16s. per week. It was hoped that when sufficient funds were raised that it might be possible to let each flat at not more than 8s. per week. The total amount subscribed so far was £1,325.

Mr. Harry Lloyd (trustee), a member of a family which has subscribed generously to the home, responded. He referred to the increased number of subscribers and the growing popularity of the home.

Mr. C. H. Roud (chairman of committee), who also replied, alluded to the care and devotion of those who directed the home.

Mr. William H. Lock submitted the toast of "The President."

During dinner the sum of £200 was subscribed, and a promise was received from Viscount Hambleden that he would pay for the first flat.

South London Musical Society.

One of the most successful concerts of the season was given at the London and Brighton Hotel, Peckham, on Saturday evening, when the chair was occupied by Mr. Henry Featherstone, supported by Mr. H. Walbrook, and members of the staff of the Fleet Printing Works. This concert marks the thirty-first year in succession that representatives of Messrs. Walbrook and Co. have given their support to the Society.

Mr. Henry Featherstone, in announcing the result of the "plate" as over £50, read several letters from many of his friends who had sent donations but were unable to be present. He sincerely commended the work of the Society in their continued efforts to raise funds for the Caxton Convalescent Home, an institution which was worthy of the support of all associated with the printing industry.

An interesting feature of the evening was the presentation of Life Governors' Certificates to two members of the "Fleet" staff (Messrs. C. H. Belsham and J. Stace), in recognition of their work on behalf of the Society.

FEWER UNEMPLOYED.—The number of persons on March 9th recorded on the registers of Employment Exchanges in Great Britain was 1,220,700. This was 14,918 less than a week ago, but 106,875 more than a year ago. The Secretary of the Ministry of Labour draws attention to a discrepancy in the previous return due to a large decrease shown in certain of the detailed returns which were received late. There was actually a decrease of 447 on March 2nd as compared with February 23rd, instead of an increase of 1,635 as previously announced.

Vellum Binders' & Machine Rulers' PENSION SOCIETY.

Annual Meeting.

The eighty-second annual meeting of this Society, held at the St. Bride Institute, was presided over by Mr. Harry Goodman (Crowther and Goodman, Ltd.).

The secretary, Mr. F. C. Peacock, having read the notice convening the meeting, said it was with great pleasure he had to introduce Mr. Harry Goodman. The firm of which Mr. Goodman was managing director had for many years taken an active interest, both financially and personally, in this Society's welfare, Mr. Jas. S. Crowther, C.C. (now retired), having presided at their annual meeting as long back as 1907.

Letters were read from Messrs. W. V. Gibbs (trustee), Frank Garrett (hon. treasurer), T. J. Hunt, H. R. Danford and others regretting inability to be present.

Messrs. W. G. Finch, J. F. Walker and P. R. Aves were elected as scrutineers of the ballot for pensioners.

The chairman, upon rising to propose the adoption of the eighty-second annual report and balance-sheet, said he had, owing to the solicitation and persuasive powers of their secretary, consented to preside this evening, and had been increasing his interest in and knowledge of the Society by looking into its past history, and it had surprised him to find the very large amount of benefit to less fortunate brethren and also themselves which could be achieved by even a comparatively small section of the printing and allied trades like their own. There came a time in life when all must get old, and it was a wise provision that took the necessary steps in early years for that period when youth had gone, strength was exhausted, and they could no longer hold their own in the stern and strenuous battle of life. This pension Society was a cheap and effectual method of doing this, supported as it was by both employer and employee and under the experienced management of their executive and secretary. They could hope in the future to achieve greater success and bring still more comfort into the lives of the aged and infirm of their trade. They would see by the agenda that the committee had recommended an alteration of Rule 6, which alteration, the secretary informed him, would strengthen the permanent fund, increasing it by £1,000, thus assuring the permanence of the reserve for the increasing number of pensioners that would have to be provided for. He moved with pleasure the adoption of the annual balance-sheet and report.

The motion was seconded by Mr. H. A. Skeats, and, after some questions had been answered, carried unanimously.

Cordial votes of thanks were given to the trustees, hon. treasurer, auditors, etc., for their valued and gratuitous services during the year past, coupled with an expression of sympathy with Mr. Frank Garrett, hon. treasurer, in his sad loss.

A hearty vote of thanks and expression of confidence in the committee, proposed by Mr. J. J. Harwood, seconded by Miss E. Marr, was received with acclamation and responded to by Mr. W. T. Higgins.

Those retiring from committee in accordance with rule, were re-elected, and Mr. R. Hirst elected in place of Mr. J. Hall, resigned.

The secretary, after some very complimentary remarks by his proposer and seconder, was unanimously re-elected.

The chairman then announced that the scrutineers had completed their work and that Mr. J. J. Harwood had been elected at the top of the poll, followed by Miss L. S. Chapman, Miss E. Marr and Mr. J. Hall in the order named. He congratuled them on their election.

The meeting then proceeded to discuss the proposed alteration of rules, which were accepted without alteration, and a cordial vote of thanks to Mr. Harry Goodman for his able and genial services in the chair, proposed by Mr. Thos. Hunt and supported by the secretary, brought a business like meeting to a close.

MR. HAROLD HARTLEY SMITH, who has died in his 60th year, was news editor of the *Evesham Journal and Four Shires Advertiser*, and a director of Messrs. W. and H. Smith, Ltd., of the Journal Press, Evesham.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

THE death has occurred at Las Palmas, Canary Islands, whither he went last autumn for the benefit of his health, of Mr. Harry Woosnam Mills, formerly managing director and editor-in-chief of the *Times of Ceylon*. Born in 1873, Mr. Mills joined the staff of the *Times of Ceylon* in 1901 as assistant editor, having been previously assistant editor of the *Civil and Military Gazette*, Lahore, and for some time secretary to the British Chamber of Commerce at Paris.

FATAL MILL ACCIDENTS.—While following his employment at the Stubbin's Paper Mill, Bury (Crompton Bros. and Co., Ltd.), last week, Richard Carter (20) was drawn into the machine and received injuries from which he died while being conveyed to hospital.—An inquest was held at Heywood, Lancs, recently on the body of Stanley Chadwick (31), a reeler at the paper mill of Messrs. Yates Duxbury and Sons, Heap Bridge, Bury. Deceased, it was stated, was wiping off a pulley wheel resin which had been sprinkled there because the belt was not gripping. He was afterwards found dead under the machine. A verdict of accidental death was returned.

"KING'S MAIL" is the title of a fine new parchment wove paper introduced by Chas. Morgan and Co., Ltd. It is a first-class watermarked paper, a beautiful colour, and should become popular with printers and stationers. This British product has been brought out in response to repeated requests for a parchment wove paper of superfine appearance, but at a lower price than the ordinary tub-sized grades.

Photogravure: Methods & Machines.

bridged by a filling-in piece. Arrangements are made to protect the doctor knife when passing over this portion of the cylinder, and the impression cylinder is cut away in a corresponding position. This machine is designed for the use of small printers, and it is suggested that the photogravure plates will be ordered and purchased by the printer in the same way as half-tone blocks.

Among the first of the Continental machines that were introduced in this country was that manufactured by Kempe. This was of simple construction, having two cylinders of equal diameter. The grippers were carried on bars supported on chains, and the gripper bars fell into a slot cut in the impression cylinder; the grippers carried the sheet from the laying-on board through the impression to the delivery table. It was found that this type of construction did not permit of satisfactory register being maintained. This firm has now introduced a machine of the usual 1 to 2 ratio between the two cylinders.

A more elaborate machine is that manufactured by Albert—the "Palatia." This machine is designed to meet every requirement of high-grade work. The engraved cylinder is fitted with the blower, already referred to, and an extra slip sheeting cylinder with its accompanying feed-board is provided, in order that the slip sheet may be carried round with the printed sheet to the delivery table. This device, however, is only necessary in the case of exceedingly slow-drying inks.

A machine introduced more recently in this country is the Johannesburg, which is used both in single and in multi-colour printing; several sizes are made, ranging from 47 in. by 35 in. to 20 in. by 15 in.

One of the most recent additions to sheet-fed rotaries is the Marinoni-Voirin; the only size made at present is 30 in. by 22 in. Details of this machine are not yet available, but it embodies several original features in design. Among these, the most important appears to be a device whereby the pinion on the engraved cylinder is not continuously driven, as is usual in sheet-fed rotary machines; during the period of the impression the positive drive does not operate and the cylinder revolves by pressure contact. This innovation should improve the register, and also remove the need to vary the thickness of the packing on the impression cylinder to allow for variations in the size of the engraved one.

Offset Gravure Machines.

There would appear to be little advantage in applying the offset principle to intaglio printing; but although the full strength of the intaglio impression may be lost in the process, possibilities are opened up for an entirely new range of printing styles.

Every printing process has its peculiarities, and offset gravure, although similar in some respects to litho off-set, will have its own individual characteristics. In spite of the great progress that has been made in litho-offset, gravure offset would have an advantage over litho-offset in that the printing surface cannot deteriorate, whereas in dealing with an ink image on a litho plate there is always an attendant risk. Offset gravure has also been employed on suitable machines for printing on rigid materials, such as glass or metal.

The Renaissance process introduced into this country some years ago by Linotype & Machinery, Ltd., was an offset gravure process, the printing being done from thin copper plates. In this machine the doctor was substituted by a composition roller revolving in contact with the engraved surface and travelling in the opposite direction. The excess of colour was wiped from the engraved surface by this roller, and this in its turn was cleaned by passing through a bath of solvent. Experimental prints were taken on this machine in monochrome and in colour by Mr. G. W. Jones, who obtained some highly successful results, and it is to be regretted that the process was not further developed.

Messrs. Penrose have been at work for some time on the problem of offset gravure, and Mr. Owen has designed and built an entirely original machine that has a number of interesting features. The copper cylinders are replaced by thin copper plates 1/50 in. in thickness. After etching, these plates are curved on a special bending machine to fit the printing cylinder, and are then gripped in position on the cylindrical base provided; a filling-in piece is fitted to bridge the gap. The size of the machine is 30 in. by 20 in., and it is designed as a perfector; a pair of engraved and offset-cylinders being arranged in a horizontal plane, the two offset cylinders being in the centre; the web of paper to be printed is passed between the two and is thus printed on both sides at one operation. The printing of the web is intermittent, the paper remaining stationary whilst the portion of the offset cylinder corresponding to the bridge-piece in the engraved cylinder passes it; the web then moves forward again to the next impression. The feeding mechanism moves the web forward continuously, and a specially designed looping device absorbs the spare paper from the reel during the stoppage of the web previously referred to. The web after printing travels forward to the cutting device and the prints are delivered in sheets. Speeds from 5,000 to 8,000 per hour have already been obtained. The composition of the ink necessary for the process has not yet been finally settled, but the results that have already been accomplished are of undoubted interest.

(To be Concluded.)

LECTURE ON TITLE PAGES.—Mr. Arthur Kay read a paper on "Title-Pages and Other Pages" to the members of Edinburgh Bibliographical Society in the Philosophical Institution, Edinburgh, recently. Mr. Kay, whose paper was illustrated by lantern slides, taken from books in his own library, said some of the works were unknown, so far as he could trace, and several were not in the British Museum. The illustrations were taken from perfect books, all dated before 1542.

SOUTH AFRICAN printers are asking the Railway Administration of the Union to apply a flat rate to all papers and board used in the printing industry without regard to price, and that the material should be carried at the lowest rate, and that the general manager of railways be approached by a committee appointed by the Federation on the subject.

Death of Mr. Robert Watt.

A well-known figure in the British paper trade has passed away in the death of Mr. Robert Watt, a director of St. Cuthbert's Paper Works, Ltd. He died on March 14th at his residence "Avalon," Arden-road, Finchley, after a long and painful illness.

THE LATE MR. ROBERT WATT.

Mr. Watt, who had turned his 60th year, had a most successful career. Not only in London but throughout the whole country his genial and courteous disposition had gained for him a host of friends, among whom he was held in the highest respect and esteem.

Mr. Watt, who was born at Peterculter, commenced his papermaking career as a cutter boy at Culter Mills.

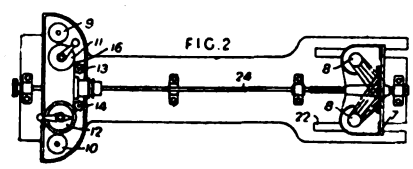
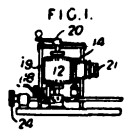
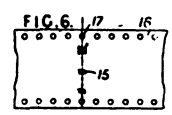
New Inventions

Rotary Intaglio Printing.

In rotary multi-colour presses, as patented by Mr. C. F. Dausmann, a web passing between the spaced printing couples is maintained in registration by mechanism which includes a moving rubber blanket yieldingly urged against one side of the web. The blanket rubs against a fixed convex support of brass, etc., to generate static electricity so that the web is attracted to the blanket. Fig. 1 show a series of rotary printing couples 16, 20 driven by bevel gearing from a common shaft 30. Each couple preferably consists of







an etched intaglio roller and a rubber-covered impression roller. The web A passing from one printing couple 16, 20 to the next is engaged by a blanket 24, Fig. 2, mounted on a pivoted framework 90 spring-pressed towards the web. The blanket may be tightened to regulate its frictional pressure on the convex surface 98 by moving an adjustable guide roller 102. A screw 69 is pivoted on the framework 90 and a spring 78 is disposed on the screw 69 between a fixed collar 79 and a poppet head 70 movable on the screw to an outer limit determined by a stop-nut 80, the head 70 being pivoted on an arm 72 on a shaft 73 connected by a lever 75 to a common rod 56 for withdrawing all the feeding blankets from the web, except the lowermost blanket, which is independently controlled. The impression roller 20 of each printing couple is mounted in a slide bearing 19 connected to a screw 44 provided with a hand-wheel 45 and engaging a screw threaded block 43, which is pressed outward by springs against cams 48, 49 on parallel shafts 46, 47 geared together by pinions 53, 54. The lower shafts 47 of the several sets are coupled by arms 55 to the rod 56, and the lowermost arm 55 is connected by a rod 57 to an arm 58 operated through a train of gears 60 . . 64 from a handle 67. To print on both sides of the paper the press may be duplicated; a small portion B of a second press is shown interconnected for simultaneous control by a system of links 81, 82, 81a to a second connecting rod 56, so that operation of the rod 56 of one of the presses will simultaneously and equally operate the other. In carrying out this operation the rod 57 of one press is disconnected. Steam pipes 108 mounted in the blanket frame dry the paper as it passes over the blanket.

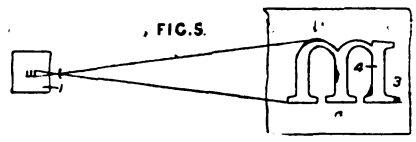


Photo-Mechanical Composing.

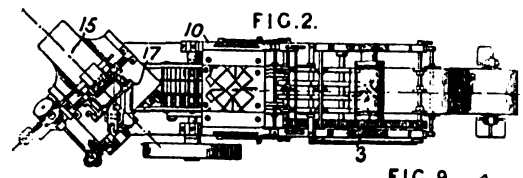
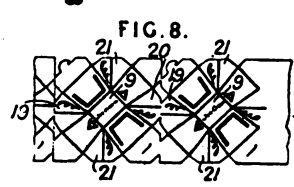
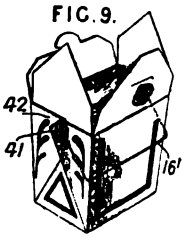
An invention patented by Messrs. J. R. C. August and E. K. Hunter relates to the production of a character matrix band or plate 16, Fig. 6, for use in photographic composing machines, the characters 15 are produced thereon photograpically, the projected image of the characters being registered on the band or plate 16 by means of at least two perforations or projections 17 thereon. A small imprint of the desired character may be made on a sheet of paper 1, Fig. 5, and an enlarged image 4 made thereof, preferably photo-







graphically, and touched up manually. The magnified image 4 is then photographically reproduced on the matrix band or plate 16 on a smaller scale. In the reduction apparatus described, the carrier 3 of the image 4 is inserted in holder 7, Figs. 1, 2, illuminated by lamps 8, and the reduced image formed by lens 21 is projected on to the sensitive matrix band 16. The band 16 contained in a light-tight casing 19, passes from a roller 9 on to a roller 10, over guide-drums 11, 12, and sprocket wheels 13, 14. Drum 12 has a handle and pointer 20 to show accurately the position of the band 16, and like indicating means may be provided on sprocket wheels 13, 14. A lever 18 enables the drums and sprocket wheels to be displaced into three or more positions in order to get more than one row of characters 15 on the band. The carrier 7 can be adjusted on guides 22 by threaded spindle 24 for accurate focussing. Lens 21 may have a shutter. The matrix band or plate may be in the form of flexible film as described in Specification 195,104, or a flexible metallic strip as described in Specification 222,940, or a paper sheet or glass plate. The perforations or projections 17 can later be used to locate accurately the band or plate 16 in the projection camera of the photographic composing machine.

Paper Boxes.

A British patent has been granted to Mr. F. W. Golby relating to paper, etc., receptacles. Ice-cream pails or boxes and similar receptacles are made from a web or strip of paper or the like which is converted into rectangular blanks, each having a rectangular bottom section 9, Fig. 8, disposed obliquely to the longitudinal edges of the web, the blanks being cut off at right-angles to the web and finally formed into receptacles; the edges 19, 20, 21 of the blanks are consequently disposed transversely of and parallel with the length of the web and the web is narrower than would be the case if

the sections 9 were disposed with their edges transversely of and parallel with the length of the web. The web may be printed obliquely before entering the blanking-press, the web being fed automatically from a reel 6, Fig. 2, through the printing-press 3 and blanking-press 10 to the cutting-device 47 from which the separated blanks pass to the forming-machine 15, where they are formed into receptacles, preferably having overlapping two-ply flaps 41, 42, Fig. 9, at each side thereof fastened together by a bail-shaped wire handle 16', which is inserted through five thicknesses of paper, at each side of the pail, as described in Specification 225,594. The blanks enter the forming-machine cornerwise, the forming-machine beinfl either arranged at an angle to the web and blanking-press, as shown, or in line therewith, in which case the blank is turned through an angle before entering the forming-machine.

PRESS SCHOLARSHIPS. — Journalism is in great demand as a profession, and the Diploma Course held at King's College in connection with the University of London is doing excellent work in giving students who have the right instinct an instructed background in general literature, modern history and languages. Five exhibitions were awarded last year, and five new exhibitions of the value of £100 per annum, and tenable for two years, are open for 1925. Applications for the examination, which will begin on Monday, July 13th, should be made to the Academic Registrar, University of London, South Kensington, S.W.7, not earlier than April 27th, for return by June 1st.

DON'T think that because you carry an accident policy it is necessary to run great risks.

Exhibitions

The Seventh International Printing, Stationery and Allied Trades' Exhibition

is one of the outstanding topics of conversation in the trade at the moment, and most of us are now occupied in making arrangements necessary in order that our show shall be as attractive as possible.

Has it struck you, however, that as there are wheels within wheels so there are exhibitions within exhibitions? The Special Exhibition Number of "The British and Colonial Printer and Stationer," on May 7th next, will be an exhibition which will excite a wider interest even than the Exhibition itself in that it will reach our subscribers in the remote corners of the earth who are at too great a distance to actually visit the Royal Agricultural Hall.

Then again it will serve the purpose of informing the trade as to the exhibits which they should see, and will in fact be in every respect a guide for discriminating visitors to the greatest event in Printerdom.

It is essential that your announcement should be prominently displayed in this issue.

Space is now rapidly being booked.

One of our representatives is at your disposal.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

MITCHELL BROS., *Engineers,* **Myrtle Road Works, Brentwood, ESSEX**

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

THE BRITISH & COLONIAL PRINTER

FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 96. NUMBER 14. [REGISTERED AS A NEWSPAPER.] LONDON: APRIL 2, 1925. EVERY THURSDAY. PRICE TWOPENCE.

Government Printer's Testing Methods.

Scientific Investigations Carried Out.

The Testing Section of the Government Printing Office, U.S.A., which was established by the Public Printer, Hon. George H. Carter, in February, 1922, was organised for the purpose of making technical tests on all paper, envelopes, materials, and supplies offered or procured for the use of the Government Printing Office, and to conduct such investigational work as might be deemed necessary from time to time to promote the best interests of the Government, and to prepare or assist in the preparation of standard specifications for the purchase of all materials used by this office.

Modern Devices.

This section has been equipped with the most modern devices for the testing of paper, textiles, oils, ink-making materials metals, and other miscellaneous supplies which are used by the printing plant.

The inspection and testing of the approximately 50,000,000 pounds of paper and paper products, including every kind from newsprint to high-grade bonds and ledgers, envelopes, tags, fibre containers, binders boards and the like, which are purchased annually by the Government Printing Office upon definite specifications for quality, is one of the most important duties of the Testing Section.

During the fiscal year, 1923, approximately 5,000 miscellaneous samples were tested in the routine work of the laboratory. There were 3,731 samples of paper and paper products tested. The other materials tested, which amounted to approximately 1,200 samples included textiles of all kinds, especially bookbinding cloths and cordage, bookbinding leathers, gasoline and oils, ink-making materials, metals, including babbitt and type metal, as well as miscellaneous materials such as waxes, soaps, glues, and various chemicals.

Standard Specification.

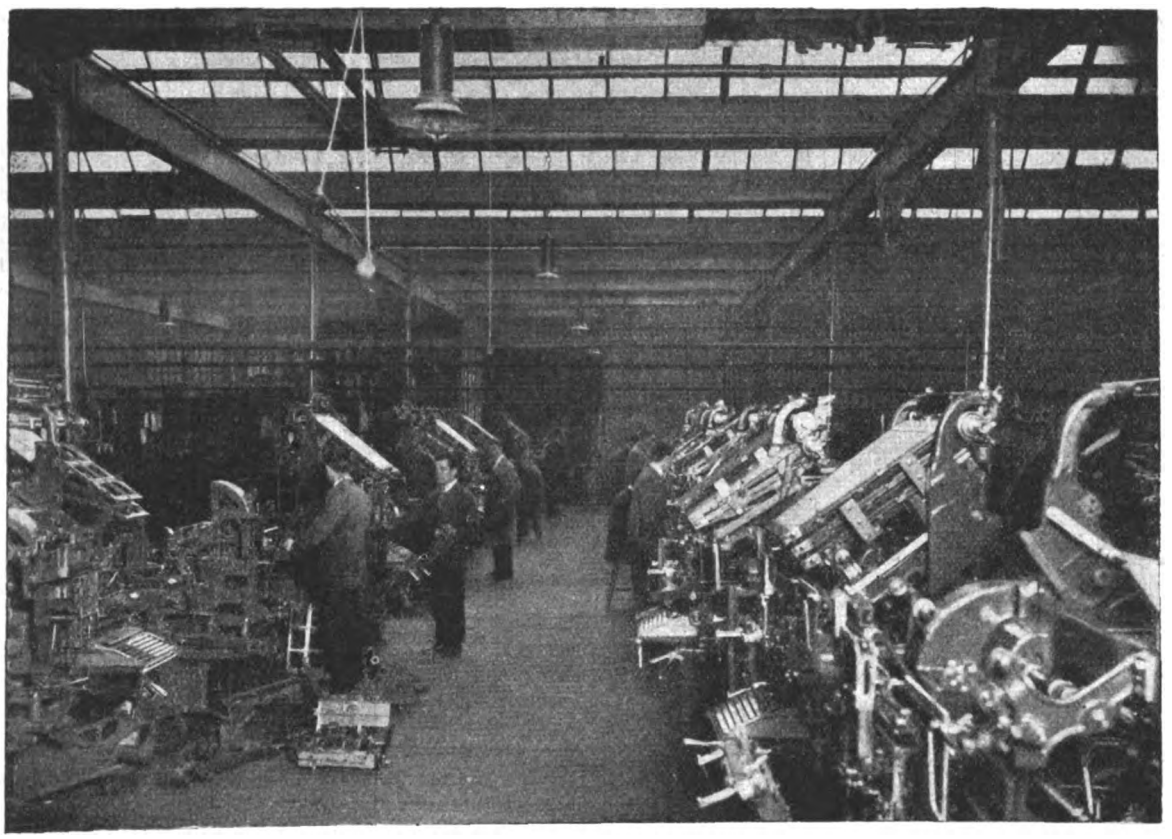
One of the primary duties of the Testing Section is the development of standard specifications for the quality of all materials used in the printing industry and the carrying out of investigational work to promote the best interests of the office. Standard specifications have been prepared for flax book twines, various types of bookbinding cloths, such as buckrams, imitation leather, and vellums, for the various materials used in the manufacture of ink, ruling dyes and inks, and the other materials used by the office. The investigational work has covered the use of solvents for cleaning type and plates; the development of various formulæ for special inks such as copying ink, stencil ink, metallic inks and safety ink; the methods of handling glue and the development of formulæ for casemaking and flexible glues; in fact, investigational work is being extended to all materials used in the various branches of the office.

It is also planned to study the difficulties experienced with paper in printing plants, such as static electricity, curl effect of ink on paper, and the various types of paper sizing and their relation to printing inks.

In the Interests of Fairness.

In order that the routine inspection work should be conducted with fairness to both the Government and contractor, definite methods are employed for sampling, inspecting, and testing. All physical tests on paper for weight, thickness, bursting strength, folding endurance, tensile strength, water resistance, absorption, and the like, are made under the uniform testing conditions of 70-75 deg. F. temperature and 50 per cent. relative humidity. A careful study and investigation has been made in establishing this testing condition in order to secure by test results which would be in harmony with actual service. Full consideration was given to the indoor conditions prevalent in press rooms, storage rooms, libraries, offices, and homes.

The Testing Section has endeavoured to handle all technical work in a strictly commercial manner. The construction and operation of the constant temperature and humidity room of the Testing Section would undoubtedly be of interest to all concerned with the testing of paper, and many requests have been made for this information. Most humidity rooms which have been constructed for testing purposes have been constructed without automatic control and with practically no attempt at temperature control. The testing rooms of the Bureau of Standards and the Bureau of Chemistry have been constructed at figures which would be too costly for a commercial plant or paper mill.



Physical Testing Room.

The Physical Testing Room of the Government Printing Office was designed by the Chief of Tests and constructed by the Buildings Division of the office. This room operates automatically day and night, maintaining uniform conditions of 70-75 deg. F. and 50 per cent. relative humidity throughout the year. The room has no outdoor exposure, being constructed within the building, and is 12 x 20 feet and 14 feet high; one end and one side is equipped with two-thirds glass, while the other end and side have double partitions with approximately 3-inch air space between them. All partitions are tongue-and-groove lumber, except the outside walls of the end and side having the double partitions, which are constructed of compo-board with all joints stripped. There is a vestibule to the entrance in order to minimise the effects on the conditions of the room by the opening and closing of the door.

The conditions are controlled by a hydrostat, which automatically, through the medium of air pressure and diaphragm valves, operates water spray nozzles or circulates ice water in the cooling coils. Neither brine nor a separate ice plant is used, the regular chilled drinking water of the plant being utilised. The atomising water-spray heads supply the necessary moisture for the room, while the ice water coil is used for dehumidifying or cooling. This coil is so constructed that in winter a section of it can be used for steam for heating and dehumidifying purposes. The blower fan supplying air to the room is so arranged that the air can be taken from any one of three sources—out of doors, inside of the adjoining room, or recirculated from the testing room itself, the air being passed through a specially constructed insulated box containing the water-spray nozzles and coil before being distributed in the room.

The Government Printing Office testing room has been in operation with entire satisfaction for about two and a half years. The total cost of the construction of the testing room, and the equipment for automatically maintaining uniform atmospheric testing conditions was between £250 and £300.

This photograph, taken a few weeks ago, shows a portion of the Linotype Erecting Department at Altrincham, Cheshire

The average monthly sales of Linotype machines during the past two years have been much larger than at any other period of this Company's activities. The Model 4 with Side Magazines alone has heavily taxed the resources of the Works at Altrincham, and there is now no doubt that jobbing printers in this country, the Continent, and the Colonies have determined for themselves that the modern Linotype gives them the facilities they need for the rapid composition of display work and general jobbing.

Photogravure from the Printer's Standpoint:

METHODS AND MACHINES

By R. B. FISHENDEN, M.Sc. (Tech)

(Continued from page 246.)

Whilst England was the birthplace of machine gravure and has maintained its premier position for "fine art" work, Germany led in the newspaper field. The possibilities of this application of rotary intaglio printing had been, however, foreseen in this country, and after having observed its application to wall-paper and calico printing, the author in 1905 mentioned in an article the possible advantages of a periodical with both type and illustrations printed in intaglio.

Periodical Printing.

The first newspaper to make use of photo-mechanical intaglio printing was the *Freiburger Zeitung*, the illustrations without the type being printed by an intaglio half-tone process. The *Hamburger Fremdenblatt* was also illustrated in the same way, but adopted the rotary gravure process for both illustrations and type in 1912. The first periodical in this country to have a photo-gravure supplement was the *Illustrated London News* of October 12th, 1912. This innovation was due to the energy and foresight of the late Mr. E. H. Rudd. The author believes that the credit for the first demonstration of gravure printing applied to periodical work in this country is due to Mr. Charles E. Bell, late of Intaglio Patents, Ltd., who made a study of every detail of the photogravure process, so that it might be worked systematically. Mr. Bell is now in charge of the largest gravure department in this country at the Amalgamated Press. Mr. Corkett, too, although gravure is not at present his chief interest, was, in America, concerned with the development of the process for periodical printing on a large scale. Mr. Corkett has also succeeded, in connection with the "Lithotex" process, in perfecting a method of engraving rollers for calico printing, a method likely to be of great commercial importance for the calico printing industry.

The first installation in the British Empire for strictly newspaper printing was in December, 1913, at the office of the *Southend Standard*; the printing machine was made by Messrs. R. Hoe and Co., and the process supplied by Messrs. A. W. Penrose and Co. This must be recognised as a remarkable achievement for a small, although important, local newspaper undertaking. The *Southend Standard* still publishes regularly pages printed by machine gravure. Since that time the use of gravure for newspaper work has made a good deal of progress, more particularly in America and on the Continent.

The *Cape Times* has also successfully adopted the process, and has attained the exceedingly high speeds of twelve to fifteen thousand impressions an hour (unit speed); although higher speeds than these have been obtained they are not deemed to be practicable in normal running.

Photogravure Speeds.

The speed of machines engaged in periodical printing varies considerably. For the best work—which scarcely comes within this category—2,000 impressions per hour is usual. Some weekly periodicals run at a speed of 3,000, while others attain 4,500 per hour. Reference has been made in the previous paragraph to the speeds obtained by the *Cape Times*. The speeds given are unit speeds, or impressions per hour per cylinder; in the case of duplex or perfecting machines these outputs are doubled. The character of the impression in rapid gravure printing differs from that which is done at low speeds. Extremely mobile ink is employed, and usually a highly calendered paper. If the impressions produced under these conditions are examined under a magnifier, it will be noticed that in some portions, particularly the lower middle tones, the effect is that of a dark cross line with a white centre instead of white cross lines dividing the dark squares corresponding to the cavities. This effect may be due to several causes, among which may be cited the possibility of a slight film of the fluid ink dragging under the "doctor," so that it is left upon the surface of the screen walls, the ink also being attracted to these elevations by capillarity. Under the conditions prevailing in this class of work, too, the pressure employed is not sufficient to cause the paper to dip into the cavities and pick up all the ink which they contain. These causes may be responsible for the dark cross lines and the white centres to the dots described.

Inks for Photogravure.

Referring again to the subject of rotary gravure inks, these are essentially different in quality from those that are used in letterpress and lithographic printing. Gravure inks consist of pigments the particles of which are in an extremely fine state of division, or of colour lakes; these are ground in some medium to bind them together, and a diluent is added to provide the necessary "shortness." A "long" varnish ink such as is used in other classes of printing is unsuitable for this work, and a "waxy" quality must be substituted. Whereas letterpress and lithographic inks dry mainly by the oxidation of the varnish, gravure inks dry by the evaporation of the solvent and its absorption into the paper. The most used forms of diluent which greatly facilitate the production of a clean "wipe" are zylene, toluene or benzine. The presence, however, of quantities of these volatile solvents in the machine-room is undesirable, and efforts are being made by the ink makers to provide a satisfactory substitute. In high-grade printing done at relatively low speeds, the ink is of a creamy consistency and the impression may show the ink standing up slightly on the surface of the paper. In work of this kind a matt surface is usually sought for; in periodical printing, however, a glossy effect is more frequently seen, which, it is suggested, sacrifices some of the most pleasant characteristics of the process. For high-speed newspaper printing, water inks are found to be satisfactory, and are, of course, economical; the pigment is made into a paste which is diluted as may be required, and for the formation of this paste, casein may be suggested, as it has the property of becoming waterproof when dry.

In periodical printing it is usual, in order to hasten the drying of the ink, to allow a considerable length of the web between the two printings. If necessary, some drying arrangement may be added between the first and second or perfecting impression, such as passing the web over a steam-heated drum; a second drying apparatus may be provided between the second impression and the cutting and folding of the paper.

Colour Gravure.

Among the examples in the exhibition (shown in connection with this lecture) are some beautiful examples of colour photogravure produced by Mr. Emery Walker. These are produced from flat plates in the same manner as colour mezzotints, the colour result being obtained in a single impression by applying the necessary coloured inks to the various parts of the plate; the colour, therefore, has to be practically drawn on the plate for every impression. Work of this kind possesses great beauty and individuality, but is, in the nature of things, expensive.

Machine gravure in colour has been done for a number of years with considerable success by the Rembrandt Intaglio Printing Co., who were the first to produce results in this way.

Machine gravure in colour is usually produced by three printings, the colour selection being made as in three-colour block making, and although some of the results that have been shown indicate that in some ways the process is still in an experimental stage, there is ample evidence that three-colour machine gravure offers many advantages. A proper understanding of the exact colour selection that is required in the positives is a necessary preliminary to success; but although fine etching as ordinarily understood is impossible, tones that have been etched too deeply may be lightened if the cavities are reduced in strength by the application of charcoal where necessary.

In spite of the inaccuracy of colour rendering which is often seen in colour gravure at the present time, it will be noticed that the colour values, particularly in the lighter tones, are more satisfactory, and appear to present a better colour rendering of those portions of the subject than is the case with three colour letterpress or colour offset work. The author suggests that the fundamental difference in the method of rendering tonal gradation between gravure and the other two processes may give an indication of the reason for the existence of the differences indicated. It has been shown in an earlier part of this communication that the lighter tones in a gravure impression consist of a thin film of ink that is merely broken by the thin screen lines. In the other processes the variations in the light tones are produced by dots on a white paper ground, the dots being of varying size but of equal intensity. Thus second and third gravure impressions superimpose further films of ink, which are practically continuous. The resultant colour, therefore, is one that is produced purely by subtractive colour mixture, a form of colour mixture which also exists in the darker tones of colour half-tone letterpress and offset work. In the lighter tones of three-colour impressions produced by these latter processes, however, the colour units consist of dots which may occasionally fall one upon the other, but are usually disposed side by side. Such an arrangement of small colour units results in an additive mixture of the constituent colours, and it has been shown by several authorities that certain irregularities in the early three-colour process may be traced to this source.

The development of machine colour gravure has been slow because there are many practical difficulties to be overcome; but when these are attacked with the same persistence that has been applied to the commercial applications of gravure, colour machine gravure printing will be equally successful.

Machines for Colour Gravure.

Flat-bed machines are being used for high class colour gravure, and are found to be satisfactory for small editions. The possibility of make-ready on the cylinder and the comparatively easy correction of the plates outweighs the slow speed and the waste of ink. Sheet-fed machines fulfil practically every requirement, especially as regards accurate register and the possibility of making ready on the impression cylinder. Such machines may be arranged in groups or tandem fashion, for continuous printing without experiencing the difficulties caused in colour letterpress work, under similar conditions, due to the slow drying of letterpress inks.

There is a great future for colour gravure in connection with periodicals, but progress has been slow in the designing of suitable machinery for rapid printing in accurate register. The *Chicago Tribune* was the first to experiment in this direction, and obtained 5,000 complete impressions per hour on a machine built by Goss, using an oil ink. This machine consists essentially of three single-colour reel-fed machines arranged as a group, with a sufficient interval between each colour to permit the ink to become surface dry before the next is applied.

In this type of machine there is great difficulty in keeping accurate register owing to the paper stretching between the impressions. To overcome this the Goss machine is fitted with an electro-magnetic register control, which, however, requires the close attention of several operatives to make the necessary adjustments. An improved device has been patented in Germany, which is designed to be entirely automatic. In a valuable article in the *Deutsche Buch & Steindrucker*, a portion of which was translated in the "Process Year Book, 1925," Ernst Brinkmann gave an account of the present position in Germany, where more attention has been given to this subject than in other countries. According to this authority, the first colour prints produced at Sieburg in 1914, some of which were seen in this country, were obtained on a calico printing style of

The above is the substance of lecture delivered before the London Central District Master Printers' Association on March 4th.

Digitized by Google

machine at a speed of 1,200 complete impressions per hour; this speed was only possible by the use of a blower for drying between the component prints.

The calico printing type of machine has a large central impression bowl or cylinder around which the paper web travels. The printing units are arranged round the circumference; in the present case four copper engraved cylinders, each complete with doctor and ink are provided, three for colour and one for monochrome. The monochrome unit provides for the inclusion of type matter. This style of machine offers considerable advantages for accurate register because the paper is supported between the impressions and the risk of uneven stretching, therefore, is reduced to a minimum. It is anticipated that speeds of 2,500 to 3,000 an hour may be obtained on a machine built with a specially large impression cylinder to allow more time for drying between each print.

According to Herr Brinkmann, a German machine is to be introduced in the near future that will combine the advantages of the calico printing type of machine with those of sheet feeding; this will be done by fitting sets of suction grippers round the central bowl, the sheets being fed and delivered in the usual way. Another machine that may be perfected shortly consists essentially of a group of single-colour units; it is designed to print from the web at 6,000 complete impressions per hour.

The technical interest of the machine gravure process is equalled only by its economic importance. The production of the cylinders requires perfect craftsmanship, accurate knowledge, and careful organisation, but, by comparison with other branches of the industry, the printing is remarkably simple, and provides the means whereby large editions can be produced cheaply at speeds which cannot be approached, for similar quality by either letterpress or offset printing. For the production of high class illustrations, both in monochrome and colour, machine gravure is perhaps of even greater importance. No process is universal in its applications, and gravure undoubtedly has its limitations, but a steady increase in its commercial use may be confidently anticipated.

(Concluded).

U.S. Paper Statistics.

The Department of Commerce, Washington, announces that, according to the data collected at the biennial census of manufactures, 1923, the establishments engaged primarily in the manufacture of paper and wood pulp reported products valued at 907,346,992 dols., an increase of 35·9 per cent. as compared with 1921, the last preceding census year. Of the 746 establishments engaged in the industry, 525 reported the manufacture of paper only, to the value of 467,584,925 dols.; 49, wood pulp only, 21,212,772 dols; and 172, both paper and wood pulp, 418,549,295 dols.

Paper Output Increase.

The total output of paper of all classes (including cardboard and other paper boards) in 1923, 8,029,482 tons, valued at 812,509,171 dols. shows increases of 47·8 per cent. in quantity and 38·7 per cent. in value as compared with 5,431,265 tons, valued at 585,734,960 dols., in 1921. The amounts and values of the principal classes of paper included in the total for 1923 were as follows: Paper boards (cardboard, strawboard, "news" board, etc.), 2,792,832 tons, valued at 182,867,070 dols.; book paper, 1,221,402 tons, valued at 171,135,954 dols; wrapping paper, 1,026,979 tons, valued at 120,763,063 dols.; "news" paper (in rolls and sheets), 1,521,680 tons, valued at 110,864,736 dols.; fine paper, 377,029 tons, valued at 89,098,027 dols.; tissue paper, 250,616 tons, valued at 44,144,313 dols.

The production of wood pulp, including that consumed in the mills in which manufactured, increased from 2,876,301 tons in 1921 to 3,789,172 tons in 1923, the rate of increase being 31·77 per cent. The production of wood pulp for sale or for consumption in mills other than those in which manufactured increased from 867,740 tons, valued at 63,373,552 dols., in 1921 to 1,063,398 tons, valued at 65,497,098 dols., in 1923, the rates of increase in quantity and value being 22·5 per cent. and 3·4 per cent. respectively.

The output reported for 1923 also included paper bags, paper boxes and other containers, and miscellaneous products, to the combined value of 29,340,723 dols. (The production of paper bags and of paper boxes and other containers in this industry constitutes only a minor proportion of the total output of such products, most of which are made in establishments classified in other industries).

Of the 746 establishments reporting for 1923, 153 were located in New York, 82 in Massachusetts, 62 in Pennsylvania, 57 in Wisconsin, 53 in Ohio, 42 in Michigan, 41 in Maine, 37 in Connecticut, 36 in New Jersey, 28 in Indiana, 25 in New Hampshire, 23 in Illinois, 17 in Vermont, 10 in Maryland, and the remaining 80 in 20 other States.

JOURNALISTS who have accepted invitations to represent this country at the Imperial Press Conference to be held in Australia next autumn include Viscount Burnham (president, Empire Press Union, and chairman of the conference), Major the Hon. J. J. Astor, M.P. (honorary treasurer of the union), Lord Apsley, M.P. (*Morning Post*), Right Hon. Charles W. Bowerman, M.P. (president, National Printing and Kindred Trades' Federation), Sir Harry Brittain, M.P. (chairman, Arrangements Committee), Mr. H. T. Cadbury (*Daily News*), Sir Emsley Carr (*News of the World*), Brigadier-General Edward B. Cuthbertson (United Newspapers, Ltd.), Mr. David Davies (*South Wales Daily Post*), Sir William Davies (*Western Mail*), Sir Howard d'Egville ("Journal of the Parliaments of the Empire"), Mr. J. E. R. Findlay (*Scotsman*), Mr. N. B. Graham (*Express and Star*, Wolverhampton), Mr. Harold Harmsworth (*Western Morning News*), Sir Edward M. Iliffe, M.P. (the Periodical Trade Press and Weekly Newspaper Proprietors' Association, Ltd.), Sir Roderick Jones (Reuter's, Ltd.), Mr. Perceval Landon (*Daily Telegraph*), Sir Frank Newnes (George Newnes, Ltd.), Sir Joseph Reed (*Newcastle Chronicle*), Mr. R. H. Shaw (*Times*), Mr. Ernest Woodhead (*Huddersfield Examiner*), and Mr. H. E. Turner (secretary, Empire Press Union).

FROM Helsingfors it is learned that the Soviet has contracted with the Esthonian Paper Mills Union for the supply of about nine million kilos of paper, valued 350 million Esthonian marks.

Trade Notes.

A LARGE number of weekly papers and periodicals were unable to publish last week owing to the strike and lock-out.

IN the Commons, on Tuesday, Colonel Guinness, replying to Sir Harry Brittan (C., Acton), said cost of printing and distributing the last issue of the London Telephone Directory was approximately £41,500, and the receipts from advertisements about £23,450.

THE National Sunday School Union announces that the executors of the late Mr. Herbert Clarke have transferred to it the *Sunday School Times*, which has existed for 65 years. From April 2nd it will be incorporated in the *Sunday School Chron cle*, and the combined papers will in future be known as the *Sunday School Chronicle and Times*.

PROPOSED UNIFICATION OF CO-OPERATIVE NEWSPAPERS.—Proposals are being made for the unification of all the newspapers published in the interest of the Co-operative movement, including the *Co operative News*, the *Millgate Monthly*, the *Woman's Outlook*, the *Scottish Co-operator*, the *Producer*, and the *Wheatsheaf*, but excluding those published by the Co-operative Union and the Co operative Productive Federation. The proposals will be put forward for ratification at the Easter meetings of the Co-operative movement.

F.M.P. ANNUAL MEETING.—A programme has just been issued of the annual meeting and cost congress of the Federation of Master Printers, to be held at Buxton from May 9th to 13th. Business, social and sports interests will all be catered for in very satisfactory fashion.

THERE is on view in the Birmingham Art Gallery an excellent exhibition of the work of students attending the Industrial Classes at the City Schools of Arts and Crafts. It includes a first-rate collection of printing, of posters, plain and illustrated, book work and book-binding ranging from fine specimens of the beautifully ornate, full-bound leather volume to the paper-cover book, also some very effective advertisement writing and illustrating.

THE sudden death is reported from Southampton of Mr. Chas. James Benest, a much-respected ex-printer belonging to Jersey, who had been settled there since 1921. He formerly worked at the Beresford Press and at the Halkett Press, Jersey.

THE death has occurred of Mr. Hubert A. Prosser (57), editor for 14 years of the *Hexham Herald*. He had previously been connected with papers in London, Sussex, Devonshire and Lincolnshire.

THE death occurred on Friday of Mr. Brice Edward Stillman, journalist, of Greenwich. Mr. Stillman, who was 52 years of age, was for more than a quarter of a century sub-editor and reporter of the *Kentish Mercury*.

THE death has occurred at Dollar, Clackmannan, of Mr. Stewart Melville, who for 52 years served as a compositor on the staff of the *Alloa Advertiser*—16 years as foreman.

THE funeral of Mr. James John McEwen, who was for 43 years in the service of *The Times*, took place on Thursday.

THE late Mr. George Henry Wilkinson, of Messrs. Wilkinson Bros., Ltd., London, printers, stationers, etc., left £59,937 (net personalty £54,659).

Exhibition of Printing.

The exhibition of British commercial printing to be on view at the London School of Printing, 61, Stamford-street, S.E.1, from April 7th to the 18th, is to be officially opened by the Right Hon. Lord Riddell at 3 p.m. on Tuesday, April 7th.

This collection of work will, we understand, prove of an interesting character, and will serve as a set-off to the exhibition of Continental printing recently held at the Printing School; it will also show that work equal to that produced on the Continent can be done in this country. Some excellent examples of printing are to be on view, including newspapers, posters, showcards, pamphlets, books, and colour reproductions.

The exhibition is free to all interested, and will be open from 9 a.m. to 9 p.m. on the 7th and 8th April, and on other days (excluding 10th and 13th) from 9 a.m. to 5 p.m.

Personal.

SIR CHAS. STARMER has been invited to stand as Liberal candidate for Cleveland (Yorks).

SIR JOHN AND LADY BADDELEY leave London this week for the Mediterranean, where they will stay for about three weeks.

LORD RIDDELL visited the Royal Free Hospital, London, on Thursday, and opened the adjoining Alfred Langton Home for nurses.

MR. SIDNEY LAMERT, chairman and managing director of Messrs. Thomas De La Rue and Co., Ltd., was honoured at the Hotel Great Central on Thursday evening, when he was given a complimentary dinner by 200 of the company's employees, in recognition of the services he has rendered the company during his two years' tenure of the combined positions of chairman and managing director.

MR. F. W. PEARCE, who has sixty years' service in the company to his credit, presided, and was supported by fifteen colleagues whose combined service totalled 820 years.

VISCOUNT BURNHAM presided on Tuesday at the 86th annual general meeting of the Newsvendors' Benevolent and Provident Institution at Stationers' Hall, and spoke of a year of consistent usefulness and well-doing.

DURING the year the expenditure amounted £3,884, of which pensions and assistance accounted for £2,887. The year's income, £8,746, included £3,333 from the executors of the late Viscount Northcliffe.

THE RT. HON. C. A. MCCURDY, K.C., presided on Tuesday at the 31st annual dinner of the Associated Wholesale Newsagents, Ltd., and the Sunday Newspapers Distributing Association held at the Holborn Restaurant. Others present included Lieut.-Colonel and Mrs. E. F. Lawson, Sir Frank Newnes, Mr. J. H. Parham, and Mr. and Mrs. E. Fifoot.

MR. CEDRIC CHIVERS is to give a lecture on "Bookbinding" at the Society of Arts on April 22nd. Mr. J. M. Dent will preside.

MR. THOMAS SUMMERBELL has been elected president of the Sunderland and District Master Printers' Association, and, along with Mr. N. H. Patterson, will represent the Association on the Alliance Executive Committee.

AT the annual meeting of the Rochdale and District Master Printers' Association, Mr. J. T. Schofield was elected president, and Mr. G. Scott (*Rochdale Observer*) vice-president. The treasurer is Mr. E. Noble and the secretary Mr. A. T. Harte.

MR. HENRY GOOD, chairman of the printing firm of Messrs. Henry Good and Son, Ltd., Moor-lane, London, E.C.2, has just celebrated his diamond wedding. Mr. Good, who is a son of Mr. Henry Good, the founder of the firm, is now in his 83rd year.

MR. G. F. MAYBOURNE, a member of the Newcastle-on-Tyne printing firm of Messrs. G. F. Maybourne and Co., has been elected vice-president of the Newcastle Fifty Club.

MR. T. K. SLEDGE, the president of the National Union of Journalists, has been presented with a gold watch on resigning from the literary staff of the *Yorkshire Post*, of which he has been a member for nearly forty years.

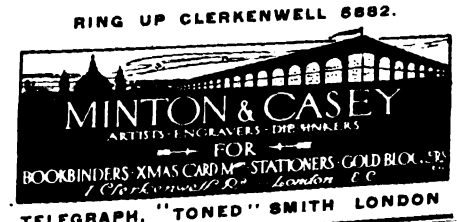
MISS MARGARET SPENCER JONES has, after 16 years' service, resigned her position as editor of the *Shop Assistant*, and Mr. William Fraser has been appointed in her place.

MR. JOHN CRAWFORD KIDD succeeds the late Mr. Robert Watt as country representative of St. Cuthbert Paper Works, Ltd. Mr. Kidd was formerly with Messrs. Chadwick and Taylor, Ltd.

MR. F. L. CAYZER is receiving many tokens of affection and esteem on his retirement at the end of this month from the directorate of Spicers, Ltd.

ON Thursday the directors entertained Mr. Cayzer to lunch in a private room at the Reform Club, Sir Howard Spicer being in the chair, and tributes to Mr. Cayzer were paid by the chairman, Mr. A. Dykes Spicer, Mr. Groves and Mr. H. G. Spicer.

MR. H. G. SPICER presented to Mr. Cayzer a silver cigarette box, bearing the following inscription: "Presented to Frederick Lloyd Cayzer, with the best wishes of his fellow directors at Spicers, Ltd., 25th March, 1925."



Trade Union Matters.

T.A. AND AUTONOMY IN WAGES MOVEMENTS.—The Executive Council of the Typographical Association have placed before their members a resolution passed by the Administrative Council of the Printing and Kindred Trades' Federation declaring that any affiliated union having agreements with employers' associations on wages, hours and holidays, etc., on being approached by the employers or themselves desiring to alter any existing agreement, shall notify the Federation of such contemplated change, whereupon the Executive Council of the Federation shall take the necessary steps to secure unity of action. The Executive Council of the T.A., in submitting the resolution, state that the resolution, if carried, will give the Federation a dominating influence on all movements, including wages. "To this policy," they say, "we cannot subscribe, being strongly of opinion that the conducting of wages movements must remain an integral part of the functions of any organisation desiring to act independently. Our members have already given evidence that they are not prepared to relinquish the autonomy they now possess so far as wages are concerned. We, therefore, impress upon the membership the necessity of voting against the proposal."

UNION DIFFERENCES AT CARDIFF.—The general president of the Typographical Association, Mr. J. D. French, has reported to his Executive Council on a visit to Cardiff in connection with Associate members doing the work of N. S. O. P. and A. members at a local newspaper office. He met representatives from the offices, and discussed the matter with them, and it was eventually decided that the question was one for consideration by the office "chapel" and the branch committee, who should endeavour to arrive at a settlement before bringing the case before the Executive Council. It was also decided to inform the N. S. O. P. and A. that they had a claim to the work, and that the Association would support them in their claim.

T. A. DELEGATE MEETING.—The Executive Council of the Typographical Association have received from the secretary of the Lowestoft branch a letter sent by the Lowestoft Advertising Committee promising assistance in making the forthcoming triennial delegate meeting of the Association at Lowestoft a success.

Stereotypers' Concert.

Work of the Auxiliary Reviewed.

The last concert of the season of the Stereotypers' Auxiliary, held on Monday of last week, proved an unqualified success. Mr. J. Raffield, of the *Illustrated London News*, occupied the chair, and the concert arrangements were again in the capable hands of Mr. George J. Harrison. Those present included: Messrs. W. C. Warren, T. Middleton, A. Chadwell, W. Crosby, W. Bullett, J. Parker, J. S. Sunderland, W. E. Condy, and W. H. Longley. The concert resulted in the raising of £84 towards the funds of the Auxiliary.

Mr. Warren (general secretary, National Society of Electrotypers and Stereotypers), in proposing a vote of thanks to the chairman, said they were all agreed that evening terminated a very successful season. By no means the smallest cause for this success, he proceeded, was the splendid result of that evening's concert, for which the hard work done by Mr. Raffield was largely responsible. In reviewing the work of the past season, Mr. Warren said the Auxiliary, as a result of the concerts, had been able to pay to the Printers' Pension Corporation a sum of £200. It had also made four grants of £5 each to the longest unsuccessful candidates, grants of ten guineas to the Almshouse Fund, and ten guineas to the Orphan Funds of the Corporation. In addition to that, the London branch members had this year voted a sum of no less than £750 to the Orphan Fund. That meant that the electrotyping and stereotyping section of the industry, with other amounts promised, will have contributed this year more than £1,000 to the Corporation. They had now completed seven pensions and were well on the way to building up an eighth. After expressing his great pleasure at what the Auxiliary had been able to do, Mr. Warren emphasised the fact that the work of the Printers' Pension Corporation was nothing in the nature of a charity. He thought one of its grandest features was that no man or woman can be a candidate for a pension unless he or she has been a subscriber to its funds.

Mr. Warren then announced that Mr. Tom Middleton was arranging a football match in aid of the funds, to be played at the "Hare and Hounds," Lea Bridge-road, on April 4th, between teams representing the Stereotypers and Fry's Metal Foundry. He also mentioned that the coming of age of the Auxiliary would be celebrated next season by a concert on October 5th, at which the joint secretaries (Messrs. Shillam and Crosby) would occupy the chair, and by a dinner to be held on October 17th.

In concluding, Mr. Warren referred very appreciatively to the excellent concerts arranged by Mr. George Harrison during the season, and then tendered to Mr. Raffield the sincere thanks of the Committee for the handsome contribution he had collected towards the funds.

The vote of thanks was heartily carried, musical honours being accorded.

Mr. Raffield, in returning thanks, said he was always pleased to do anything for the advancement of the industry in which he had spent the best part of his life. He had been very closely connected with electrotypers and stereotypers for many years, and his association with them had always been of the pleasantest character.

The Concert Artistes.

The musical programme included many features of outstanding interest. Miss Vera Davis (child entertainer) delighted the audience with a character sketch, and showed a complete mastery of elocution, acting and mimicry. Miss Audrey Smith (the clever daughter of Dr. Edwin Smith, the N.E. London coroner), as a solo pianist, played Chopin's Scherzo in B Flat Minor and other compositions in excellent style. Amongst other well-known artistes were Mr. Thomas Thomas and Telini (in operatic duets), Miss Ruby Helder (the famous lady tenor) and Mr. John Story, the celebrated Dickens' entertainer. Others who contributed to the programme were: Georgia Drayson, Josephine Dorrell, Jessie Wood, Ada Kisby, Ethel Maude, Selwyn Driver, Robert Pitt and Langton Marks, Courtney Mayverne, Chas. Hayes, Fred Morris, Fred Hylton, Albert Parkins, Chas. Hardy (accompanist).

WASTE and old paper require a special license on export from Austria.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

Mr. J. Raffield.

Mr. J. Raffield, who occupied the chair at the recent concert of the Electrotypers and Stereotypers' Auxiliary (reported in another column) is a well-known and popular member of the printing industry. He is now

MR. J. RAFFIELD.

serving his twenty-fifth year with the *Illustrated London News and Sketch*, Ltd., having started with this concern so long ago as January, 1901. At the present time Mr. Raffield holds the position of commercial representative with this important establishment, and specialises in electrotyping, stereotyping and photogravure processes. He has held his present position since 1913. In 1920 he was elected a member of the executive of the Electrotyping and Stereotyping Employers' Federation, an organisation which, by agreement and mutual understanding with the National Society of Electrotypers and Stereotypers has exerted its influence in securing harmony in the working conditions in the section of the industry covered by these bodies.

Claims for Offset Machines.

Messrs. Francis J. Connolly, Ltd., the sole agents for Marinoni-Voirin, Paris, write us: "We notice on page 194 of your issue of March 19th an article referring to Messrs. George Mann and Co.'s products. In this article it is claimed that they are the only manufacturers of an offset machine which will print at will (1) two colours on the front of the sheet; (2) the same colour back and front, *i.e.*, perfecting; (3) different colour front and back, *i.e.*, perfecting; (4) single colour front or back. Allow us to advise you that their claim cannot be substantiated; we have been making such a machine for years past." Messrs. Connolly go on to refer to their two-colour successive (or perfecting) rotary lithographic offset machine, for which they claim as a great advantage that each colour has its own damping equipment.

MR. JOSEPH H. FIELDING, formerly of Messrs. Kelph, Darwen and Pearce, London, has been appointed by Messrs. Cookson Bros, paper stock merchants, Stockport, to act as their representative.

CAMBRIDGE University Press sends us a new issue of the *Cambridge Bulletin* in which particulars are given, with illustrations, of recent notable books issued by the Press.

FROM the house of John Swain and Son, Ltd., comes a charming piece of work in calendar production, the main feature of which is a Swain Colourgravure reproduction. The picture, a portrait study, "Reverie," is an enlargement of a miniature on ivory, and the delicate tinting of the original is delightfully indicated in this fine piece of colour printing.

Government Contracts.

Contracts were entered with the following firms during February:—

H.M. Stationery Office.

CLOTH, BOOKBINDING.—T. Williamson and Co., Manchester; Manchester Bookcloth Co., Ltd., Manchester.

CLOTH, TRACING.—Winterbottom Bookcloth Co., Ltd., Manchester; B. J. Hall and Co., Ltd., Cheadle.

Map-Making Firm's Centenary.

An interesting centenary being celebrated in Edinburgh is that of the well-known firm of W. and A. K. Johnston, map makers, which was instituted in March, 1825, by Mr. Wm. Johnston. A year later he was joined by his brother, Mr. Alexander Keith Johnston, whose influence turned the fortunes of the firm from steel-plate and copper plate printing into a distinguished geographical channel. The first maps published by the firm appeared in 1830, under the title, "A Traveller's Guide," but the first work of importance with which Keith Johnston's name was associated was the "National Atlas," after five years' work, gaining for him the distinction of Geographer at Edinburgh in Ordinary to Her Majesty.

The founder of the firm, William, became Lord Provost of Edinburgh, and was knighted by Queen Victoria. Keith became one of the leading scientists of his day, and was honoured by geographical societies all over the world.

THURSDAY, APRIL 2, 1925.

The Settlement.

NOT only the bookbinding trade but the printing industry as a whole has good reason to feel deep satisfaction that the recent dispute, which threatened to disrupt the whole printing trade of the country, was brought to an end last week in a manner acceptable to both the employers' and the workers' sides of the industry. Amongst vital matters at stake in the dispute the most important were the authority of the Joint Industrial Council of the Printing and Allied Trades and the prevention of sectional and unconstitutional strikes and lock-outs, also the question of the cost of bookbinding—a matter indissolubly linked to the subject of wages. On all these points the new agreement will, we think, commend itself as reasonable. On the matter of the stability of the industry, the printing and allied trades are granted increased security—thanks to the excellent working of the Joint Industrial Council, which itself emerges stronger from the severe trial to which it has been subjected. Moreover, there is not linked with the settlement anything to cause an appreciable increase in the general cost of bookbinding—which, it is felt by binders, bindery engineers, and the trade generally, would mean a serious set-back to an industry already handicapped by high costs of production.

* * *

Postage Stamp Printing.

AN interesting question asked the other day in the House of Commons related to postage stamp printing. Mr. R. J. Meller, M.P., for the Mitcham Division of Surrey, asked the Chancellor of the Exchequer "if he will say whether the British Mint Authorities prepare and supply to His Majesty's printing contractors stamp plates for postage stamp printing; if so, was this concession offered to other tenderers for the contract; and if he will state the number of 10s. and 20s. notes printed in their present form up to December 31st, 1924." The reply was: "The Post Office supplies free of expense to the contractor the plates required for printing postage stamps; this is a condition of the contract, and was clearly stated in all the invitations to tender. The plates are prepared at the Mint. The number of £1 Currency Notes of the present design issued up to December 31st, 1924, was 2,224,000,000 and of 10s. notes 948,000,000." The information conveyed in the last part of this reply will be of much interest in certain sections of the trade, but what we want to point out at the moment is that the plates the Mint authorities are able to supply are typographic plates, that is to say that they can only be printed in a typographic manner; hence the British authorities overlook all other processes. In other words, they do not give printers who are able to work by other methods the opportunity of quoting for postage stamp printing, insisting as they do that typographic printing plates should be supplied by the Mint authorities. Every one in the printing trade knows of the great revolutions that are taking place in printing procedures, particularly in offset printing and in the photo-mechanical methods of making printing surfaces. Is it not time the Mint authorities should cease to insist upon typographic plates being used, thus shutting the door to possible advantages which might be reaped from technical progress?

* * *

Books and their Paper.

SPEAKING at a recent luncheon of Manchester printers, the chief librarian of the city, in a witty allusion to the prolific accumulation of books, put forward a humorous suggestion that the paper for books might be graded according to the value of the work, arranging that after a certain period the paper would suddenly disintegrate and put an end to the life of the work. One can well understand such a desire on the part of the librarian controlling an ever-accumulating store of literature, much of which is ephemeral in interest and trashy in content. But why not consider the proposition from a different point of view, after conceding that even paper from sawdust cannot be sold with an accompanying guarantee that it will fall to an impalpable powder within a given space of time? Why should not librarians agree upon a scheme of annual clearance, ridding the shelves of obsolete works, dilapidated volumes and novels which have passed their period of interest or of fashion? Waste stock merchants would doubtless attend with alacrity for the removal of condemned literature. Or, better still, if fantastic propositions have any value, why not call upon the inkmakers who have already demonstrated mystic powers in the preparation of inks for the creation of hoarding images which have the trick of vanishing by a more or less predestined date. They could supply inks as the photographic people supply films, carrying a date of expiry on the wrapper.

* * *

Removable Ink?

TAKEN seriously, there is the germ of an idea in this ink suggestion. Waste stock would gain greatly in value as an auxiliary type of papermaking material if the difficulties of de-inking could be eliminated. Printers' black ink is a compound of linseed oil and carbon, or similar mineral black, the former acting as a carrier or vehicle for the latter. It is impossible to bleach or efficiently saponify the ink impression as imparted by mineral blacks. If the printers' inkmaker could discover an alternative to the present class of inks which would embody, along with other necessary features, an easy susceptibility to cheap removal treatment, he would give a renewed lease of life, or, more correctly, a prospect of re-birth, to the bulk of the paper which under our existing system serves a too-restricted purpose.

The Printing Trade Crisis.

Terms of Settlement.

On Wednesday of last week there were strong hopes in the trade that the day might bring an end to the serious dispute in the bookbinding section of the industry—which had led to a strike of some 10,000 members of the Paper Workers' Union, following a lock-out of 5,000 employees of the Master Bookbinders' Association. The points at issue, however, proved too difficult to allow of these hopes being realised, and negotiations continued for something like twelve hours on Wednesday, and then had to be carried over to Thursday. Thursday's proceedings provided the longest single conference that has ever taken place in the printing industry, and one of the longest recorded in any labour dispute. Representatives of employers and operatives met at one p.m. on Thursday afternoon, and sat more or less continuously for joint or separate parleys until an agreement was signed at about 5.45 a.m. on Friday.

An Agreed Statement.

Entitled "Settlement of the Dispute in the London Printing and Binding Trade," an agreed statement as to the negotiations and settlement has this week been issued in the following terms:—

"We are glad that this dispute is now satisfactorily ended, and we think it is desirable to issue a joint brief report of the ultimate settlement, for the information of all concerned.

"Mr. G. A. Isaacs, the chairman, and Mr. A. E. Holmes, joint secretary, on behalf of the Joint Industrial Council, early last week invited the negotiating committees of the Federation of Master Printers, the London Master Binders and the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers to meet the Conciliation Committee of the Joint Industrial Council and endeavour to find some means of settling the dispute. Protracted negotiations, under the able chairmanship of Mr. Isaacs, took place on Wednesday and Thursday last, the final sitting lasting from 1 p.m. on Thursday until 5 a.m. on Friday.

"A settlement satisfactory to both sides was ultimately reached, largely as a result of the influence of the Conciliation Committee of the Joint Industrial Council and the principal points of the agreement are given below.

"It is gratifying that this serious dispute, which had most dangerous possibilities, has been settled within the industry, without the intervention of any outside parties. The main object of the Joint Industrial Council is to prevent disputes, or, if they arise, to find a satisfactory solution. The negotiations of last week prove that the Joint Industrial Council can be of very considerable service in dealing with difficulties in the printing and binding trades, and its usefulness has been recognised by all the parties to the dispute.

Federation of Master Printers:
President: W. B. Wykes.
Secretary: A. E. Goodwin.

National Union of Printing, Bookbinding, Machine Ruling and Paper Workers:
President: G. Harraway.
Secretary: T. G. Newland.

"The chief points in the agreement are:—

"It was agreed that the employers' organisations and the Union nationally and locally, and all their branches, sections and chapels shall respect the Constitution of the Joint Industrial Council, and will take no aggressive action of any kind, until Rule 26 of the J.I.C. dealing with disputes is fully complied with.* This means that no strike, lock-out, or other aggressive action can take place until the matter in dispute has been referred to the Joint Industrial Council, and their efforts have failed to secure a settlement.

[**Extract from Joint Industrial Council Constitution, Rule 26.*

In the case of any dispute of a local character, as defined by Rule 18 (District Committees), no strike, lock-out or other aggressive or coercive action shall be taken until the matter in question has been placed by the consent of the parties, before the District Committee, or failing such consent, before the Conciliation Committee of the Joint Industrial Council, and pending such reference, the dispute shall remain in abeyance, the members of the union (or unions) to remain at work, and the employer (or employers) concerned not to persist beyond the point of protest. Both parties shall conform to normal conditions pending the reference. In all cases the District Committee must be notified of the dispute.]

"In future all negotiations for the binding industry shall be national, and that if any agreement be made for extra rates or any special conditions over and above the minimum existing wages these shall be flat rates for the whole country, London, and the Provinces.

"It was also agreed that the finding of the Joint Industrial Council Conciliation Committee on 24th February, 1925, on the Greycaine Book Manufacturing Company's dispute shall be carried out, and that there shall be no victimisation on either side.

"New rates of wages have been agreed on a National basis for a considerable number of special binding machines."

On behalf of the Federation of Master Printers and London Master Binders.

H. Rivers Fletcher. J. Griffiths.
M. Clowes. Alf. Langley.
R. Leighton. A. E. Goodwin.
J. Crowlesmith. W. Whyte.

On behalf of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers.

T. G. Newland. S. Stubbings.
Geo. Harraway. James Kelly.
E. W. Spackman. E. Friend.
G. F. Larcey. B. W. Kirby.
F. Knight. H. Chalk.

The Members of the Joint Committee Industrial Council Conciliation Committee.

Geo. A. Isaacs. W. B. Wykes.
W. Wright Bemrose. R. A. Austen-Leigh.
W. A. Clowes. Frank Murrell.
G. T. Bevan. H. Wilson Howes.
G. Tomkins. A. E. Howes.
Edwin Geo. Yates.

March 30th, 1925.

It may be added that the finding of the J.I.C. Conciliation Committee referred to (February 24th) was to the effect that the Greycaine employees engaged on work printed on the premises should be paid at L.M.P.A. rates but that those on ordinary bindery work should be paid at rates to be settled by the current negotiations.

The schedule of the new rates of wages for special binding machines will be found on page 261.

Copies of the above statement can be obtained on application to the Federation of Master Printers, 7-10, Old Bailey, E.C., or from the N.U.P.B.M.R. and P.W., 44, Blackfriars-road, London, S.E.1.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

H. D. Jackson and J. J. Melly, general and commercial printers, 65, Weston street, Upper Norwood, S.E.19, under the style of Jacksons.

W. J. Taylor and A. E. James, printers, publishers and wholesale stationers, at Avonmouth, Bristol, under the style of Taylor and James.

H. J. Barnes and E. H. Burt, plain and fancy box manufacturers, 8, Academy Buildings, Fanshaw-street, Hoxton London, under the style of Barnes and Burt.

BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

J. Carter, Station-road, St. Blazey, Cornwall, printer and stationer.

Boys on Motor Vans.

At a recent meeting of the Joint Reference Committee composed of a sub-committee of the Labour Committee of the London Master Printers' Association and a sub committee of the Paper Workers' Union (London Central Branch) it was agreed to point out to London master printers that the Joint Reference Committee consider that no boy should be left on a van as van boy or guard after he has reached the age of 16. It is hoped that, in the best interests of their employees, master printers will so arrange their apprenticeship vacancies that any boys employed as van guards or messengers can be absorbed into permanent employment at the age of 16, and the Labour Committee trust that every effort will be made by L.M.P.A. members to carry out this suggestion, which would have the effect of discouraging "blind alley" employment and, at the same time, lead to a reasonable number of skilled journeymen being available in due course.

The Australian Government have agreed to regard rags and waste paper as in the same category as wood pulp in applying the preference concession to British paper.

The FINAL PLATE MOUNT
(WESEL PATENT)
Provides absolute security to every user throughout every press run.

The Bookbinder

Modern Book Production and its Future Aspects.

By C. L. GREY.

Article I.—From Folding to Trimming.

It is seldom one can read a frank article on modern wholesale bookbinding. There is plenty to be read about the art and ancient craft, etc. (all very laudable), but the practice of present-day wholesale bookbinding is largely taboo. It is my intention herewith to give vent to opinions formed through practical and administrative aquaintanceship with modern book production.

First and last, wholesale binding to-day is a question of machinery. From the genesis, when the printed sheets are taken from their parcels (*i.e.*, if the concern is a binding shop only), machinery should take up the job. The sheets should be laid out flat on wooden skips or trays, which in turn will be conveyed by elevator truck to their destination by the folding machine.

The best way to fold book work is by the quadruple 16 folding machines which fold 64 pages at a time and deliver work as four 16-page or two 32 page sections, the 32 pages being formed by one 16 page being inserted into another by the machine. This method should apply to all quantity work up to Royal 8vo. Above this size one has to use 32-page machines, which throw out two 16-page sections or one 32-page (16's inset). These folding machines should be fitted with continuous feeders. There are jobbing folders to fold 32 pages, all up in one sheet, or single 16-page folds, 12 page or 24 page, etc. These are useful in certain classes of work, but are not recommended for general book work.

After folding, the first and last sheets of the book go to the endpapering machine. There are two types in general use, the "Brehmer" and the "Marresford." The Brehmer is hand-fed, whilst the Marresford has an automatic magazine feed for both sheets and endpapers, and is an essential unit for quantity work. The next step—having pasted plates, if any, into their sections, is the gathering machine, There are two types of gathering machines, the Juengst and the Sheridan. Both are American machines, and are in a state of high perfection. The Juengst is particularly effective; wire-stitching attachment, wrappering, and so-called "perfect binding machines" can be coupled on, the whole working in continuous motion up to any desired number of sections. Very few British binderies have enough work to keep more than one of these gathering machines running continually, their running speed being 3 600 books per hour.

The book is now ready for sewing. Smyth Sewers No. 3, improved type, are speedy machines for French sewn work (no tapes), also for tape-sewn books providing the work is not too heavy. Personally I prefer the Smyth No. 8 machine sewing through the tapes for the general run of work. This machine sews two up, that is, two books side by side, such as crown 8vo. novels; it is also capable of standing up to heavy work. But there are other good types of sewers and it is advisable to have a variation in plant to meet the fluctuating peculiarities of work. For instance, there is a Martini sewer which puts every other stitch higher up in the sheet. This has the effect of distributing the thread more evenly throughout the work thereby reducing the swell in the back by about half. This is of great value when sewing a book of thin paper, with many sections, and enormously facilitates nipping, for this kind of book has a knack of "running in" at the back on taking pressure.

The next operation is to nip the book. It is the first stage towards giving the work a definite uniform shape and size, which is of the utmost importance. It is absolutely necessary that all books of a job should be of equal thickness, otherwise nothing but trouble will result in all the stages of forwarding. Messrs. T. W. Sheridan have gone out seriously to cater for the efficient and quick nipping of books. It is essential to take the air out of a book in one press, that is to say, the book should be nipped all over at the same time and one nip in most cases should give the required result.

There is a point of criticism to make with regard to these nipping presses. They are of American origin and their design is the outcome of American conditions, but American work is on the whole of a more solid nature than the British. They use papers of a harder nature, with finished surface, instead of the wood pulp so largely used in this country. Consequently this kind of book is of a more solid nature before nipping and reduction in bulk after pressure is not so marked. We use extensively the spongy wood pulp paper, which bulks well, and the prevailing idea is to keep up the bulk. Thus we bring to the nipping machine occasionally a job which, nipped in say 4½ in. handfuls, is awkward to feed in because the rise and fall of the machine is insufficient. To open up the machine is obviously no remedy, as thereby one loses pressure. Perchance machine designers will notice this point.

Our next stage is to the cutting machines. Here the outstanding machine for massed cutting is undoubtedly the Seybold Automatic Book Trimmer with trough feed, conveyor delivery, and suction shaving remover. This machine is quite revolutionary in character and is equally efficient on book or magazine work. As only 4½ ins. of book are clamped and cut at a time, swell in the back if any is easily overcome. The output is 20 24 piles cut per minute, head, tail and fore-edge. Multiplying this by number of books in each pile, we arrive at output.

The Smyth 3-Knife Trimmer is also in use in several big binderies. As this machine has a comparatively large volume of books under pressure whilst cutting, it is necessary that the work should be of a fairly solid nature; swell in the back leads to trouble. Output is 700-1000 handfuls per hour. Obviously both these machines are constructed for long runs. For general jobbing book work the Seybold 3-Knife Trimmer wants a lot of beating. The single knife guillotine cutter for book work is a back number, though of course indispensable for cutting up sheets, plates, etc.

(To be Continued.)

Notes and News.

The Lock-Out and Strike.

There must have been very widespread relief in the bookbinding trade, when the week end brought the news that the dispute had been brought to a settlement. Early in the week there was every indication of a serious crisis. The circular issued by the Federation of Master Printers was worded so strongly as to leave no doubt regarding the menace with which the trade was threatened. All the elements of a dangerous situation were present in the position of affairs at the commencement of the week. Although there was no dispute, no quarrel and no difference of opinion between the employers' federation and any of the 23 unions except the odd one or two, there was, behind it all, the fact of the National Agreement, and also something of an alliance between a number of unions. So long as the National Agreement is preserved intact, the whole industry is safeguarded for both sides. The machinery has been laboriously devised to retard and as far as humanly possible prevent sudden or spasmodic lock-outs and strikes. If loyalty to the Agreement is an assurance of peace and constitutional progress for all concerned in its working, disloyalty, on the other hand is a direct menace to the whole of the allied industries. Sectional direct action, whether undertaken by employer or employee, by association or by union must inevitably bring the printing and allied trades of the whole country face to face with calamity.

Reviving Trade.

There are signs of reviving trade in the bookbinding industry, and reports from the principal centres are fairly good. Both on the letterpress and stationery side the volume of orders appears to be growing larger. Some good contracts have been placed by banks, corporations and the leading public companies. The binders' chief complaint is that co npetition is so very keen. It behoves employers to study costs very carefully. The true knowledge of cost of production based on recorded data and current expenses often turns the scale between loss and profit. There are still too many bookbinders whose methods of arriving at cost are out of date. Unfortunately these non progressive establishments, with their haphazard lack of system, harm not only themselves but their more efficient fellow employers also. Much of the low-priced work of to-day has been brought about by the ignorance of bookbinders on the subject of cost of production and how to arrive at it.

Bindery Costing.

Much is made of the difficulty of arriving at bookbinding costs, but the arguments are no stronger or better founded than those advanced in the early days by printers who are now praising the Costing System and claiming priority over their *confreres* in the matter of working it out to finality. There is no room for arguments from small or large establishments when the most progressive and the most reputable among both large and small bookbinders have adopted the official Costing System and would not under any consideration revert to early crude ideas of conducting that side of the business.

Leather Prices.

Prices of bookbinding material are keeping steady, with leathers on the firm side. For good quality skins the following prices are being paid: Rough goat, 1s. per square foot; rough calf, 1s. 6d. to 1s. 9d.; rough morocco, 1s. 3d.; fair calf, 2s.; coloured calf, 2s. to 2s. 3d.; thin coloured basils, stained, 7d.; ditto, dyed, 8d.; stout basils, 9d.; buff basils for half-binding, 7d.; ditto, for full binding,

Digitized by Google

9d. to 10d.; fair basils, 10d.; diced basils, 1s.; grained basils, 9d.; skivers, 6d. to 7½d.; grained skivers, 7d. to 8d.; H.G. morocco, 1s 9d.; Levant morocco, 1s. 9d.; Levant goat, 1s. 6d.; H.G. goat, 1s. 9d. to 2s.; pigskins, 1s. 3d. to 1s. 9d., according to quality; Anglo-Russias, 1s 9d.; Persian calf, 1s. 3d.; P.G. roan, 7d. to 8d.

Miscellaneous Supplies.

Gold leaf is quoted on the basis of 48s. 6d. per 1,000 leaves, 22 carat, 3¼ in. square, or 60s. 6d. per 1,000 for 4 by 3¼ in. Best imitation gold leaf is obtainable at 25s. per 1,000 sheets. 5 in. by 5 in. Calicoes vary between 4d. and 6½d per yard, a very fine lining quality being offered at 5¾d. Glues remain firm, the price for high grade skin glue standing at 45s. per cwt. Bone glues are to be secured at 30s. to 35s per cwt. Millboards are quoted 28s. per cwt. for fine quality machine-made grey; 36s. per cwt. for black hand made.

Dutch Strawboards.

Dutch strawboards are quoted £9 per ton from store, carriage forward for half ton lots, with the usual extras for substances over 1¼ lb. Recent imports have been heavy, and stocks are good. The approach of mild weather should bring a slight easing in price, but mill quotations are not yet reduced.

Commendable Book Cloths.

Samples of book cloths have reached us from the producers, Messrs. Bentley, Smith and Co., Ltd., of 2, King Edward-street, E.C., and we have subjected them to practical test. They are of exceptional value, and stand quite apart from the usual run of cheaper book cloths, which have little else beside low price to recommend them. The new B. and S. book cloths are certainly low priced, but they possess the strength, firmness, closeness of texture and suitable surface demanded by the bookbinder. Prospective users should investigate for themselves by securing the pattern books showing the various grades, colours and finishes produced.

Unemployment Statistics.

Official reports furnished to the Ministry of Labour show that employment in the paper trade registered a further improvement during February, and was generally described as fair, though bad in the wrapping section. The mills were still working irregularly in some districts, owing to a shortage of orders. In the letterpress printing trade employment was fairly good, and rather better, on the whole, than in January. London and Manchester were included among those centres reporting an improvement; at Birmingham, however, there was a decline, and employment was only moderate at Edinburgh. With electrotypers and stereotypers employment was again good. With lithographic printers employment continued fair generally. It was, however, reported as bad and worse than in January at Manchester and Glasgow. Employment with lithographic artists was reported as fair in London and slack at Manchester. In the bookbinding trade employment was again moderate generally; there was a slight improvement in London and Edinburgh, but a decline at Liverpool and Leeds. The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 6·0 at February 23rd, compared with 5·9 at January 26th and 6·2 at February 25th, 1924 In the paper and paperboard industry the percentage was 7·5 at February 23rd. compared with 7·5 at January 26th and 9·6 at February 25th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 7·2 at February 23rd, compared with 7·9 at January 26th and 7·6 at February 23rd, 1924.

Messrs. J. M. Dent and Sons, Ltd., the London publishers, have just issued the first number of the *Bookmark*, a neat little quarto quarterly containing well-written and illustrated articles about recent books issued by this famous house.

In the King's Bench Division on Friday Sergeant Sullivan, K.C., was granted a rule *nisi* for a writ of attachment for contempt of court, returnable for April 6th, against the editor, publisher, and printer of the *People* in publishing articles relating to William Cooper Hobbs, who was sentenced to two years' hard labour at the Central Criminal Court, and whose appeal is now pending.

Special Machines in the Bindery.

The New Wage Rates.

The following is the schedule of rates for special power machines agreed in the recent settlement. These rates are to be embodied in the National Agreements designated No. 5, for Bookbinders and Machine Rulers and No. 4 Male Members' Agreement, N.U.P. & P.W.

Binding Machines.

(Combination):

(a) *Perfect Binder* (gatherer, back cutter, rougher, muller wrapperer). Manager (Provincial) ... 20s. 0d.

(b) *Gatherer, Wire Stitcher and Wrapperer.* Manager (Provincial) 10s. 0d. Where an Assistant is employed the rate shall be 5s. above Class III.

Single:

(c) *Wrappering only* (back cutter, rougher, muller and wrapperer) Manager (Provincial) 10s. 0d.

(d) *Wrappering only* (wire stitcher and wrapperer) Manager (Provincial) 5s. 0d.

Mercer or Similar Gathering Machines.

Up to and including 25 boxes to be excluded from this Agreement.

Above 25 boxes:

	One Machine	Two Machines
Provincial—above Class II	2s. 6d.	7s. 6d.
London	5s. 0d.	10s. 0d.

Where two machines of any size are being worked in close proximity a man shall be in charge at above rates.

Folding Machines

(completely automatically fed)
One or two folds excepted.
All Sizes.

Pile Self Feeders:

	One Machine	Two Machines
Provincial—above Class II	3s.	4s.
London	5s.	7s.

Continuous:

Provincial—above Class II	4s.	5s.
London	6s.	8s.*

Where an assistant is employed he shall be paid not less than the Bench Rate in London and in the Provinces, Class III Rates.

Only to apply to machines at present on the market or in use.

* In London, 2s. for every additional machine.

Cutting Machines

Three and Four Pile Friedheim:

Operator (Provincial) above Class I 5s. 0d.

Assistant (Provincial) above Class III 2s. 6d.

Krause and Seybold (Striker):

Provincial ... ... 2s. 6d.
London ... ... 8s. 6d.

Seybold Trimmer:

Operator—Provincial ... ... 10s. 0d.
London ... ... 25s. 0d.

Assistant (Second Hand):
Provincial—above Class III ... 5s. 0d.
London ... ... 10s. 0d.

Smyth Trimmer:

Provincial ... ... 2s. 6d.
London ... ... 5s. 0d.

Gauge Perfectas:

Provincial ... ... 2s. 6d.

Strip Back Lining:

Provincial ... ... 5s. 0d.
London ... ... 7s. 6d.

Blocking Machines:

Vertical Miehle and Miller Feeder:
London ... ... 9s. 6d.

These advances are on minimum rates.

Where higher rates are now being paid there shall be no reduction.

This Agreement becomes operative on pay day of the week ending April 4th, 1925.

Mr. Charles James Cropper (72), J.P., of Ellergreen, near Kendal, Westmorland, chairman of James Cropper and Co., Ltd., a director of the London and North-Western Railway Co., the Birmingham Canal Navigation, the Cockermouth, Keswick, and Penrith Railway Co., and the Dundalk, Newry, and Greenore Railway Co. left £59,850 unsettled (net personalty £16,422).

JUST PUBLISHED.

The Price Book
1925
FOR THE PRINTING & ALLIED TRADES

4th EDITION, enlarged and brought up to date.
By F. G. SHEPARD.

540 pages. Price 5/6 post free
Contains an immense amount of information useful to Master Printers, Managers, Estimating Clerks and Overseers; the prices of materials, work, etc., being given in every department, for London and the Provinces. Also includes a very complete list of Watermarks of paper.

Copies may be had from the Publishers:

The Bookbinder

Modern Book Production and its Future Aspects.

By C. L. GREY.

Article I.—From Folding to Trimming.

It is seldom one can read a frank article on modern wholesale bookbinding. There is plenty to be read about the art and ancient craft, etc. (all very laudable), but the practice of present-day wholesale bookbinding is largely taboo. It is my intention herewith to give vent to opinions formed through practical and administrative aquaintanceship with modern book production.

First and last, wholesale binding to-day is a question of machinery. From the genesis, when the printed sheets are taken from their parcels (*i.e.*, if the concern is a binding shop only), machinery should take up the job. The sheets should be laid out flat on wooden skips or trays, which in turn will be conveyed by elevator truck to their destination by the folding machine.

The best way to fold book work is by the quadruple 16 folding machines which fold 64 pages at a time and deliver work as four 16-page or two 32 page sections, the 32 pages being formed by one 16 page being inserted into another by the machine. This method should apply to all quantity werk up to Royal 8vo. Above this size one has to use 32-page machines, which throw out two 16-page sections or one 32-page (16's inset). These folding machines should be fitted with continuous feeders. There are jobbing folders to fold 32 pages, all up in one sheet, or single 16-page folds, 12 page or 24 page, etc. These are useful in certain classes of work, but are not recommended for general book work.

After folding, the first and last sheets of the book go to the endpapering machine. There are two types in general use, the "Brehmer" and the "Marresford." The Brehmer is hand-fed, whilst the Marresford has an automatic magazine feed for both sheets and endpapers, and is an essential unit for quantity work. The next step—having pasted plates, if any. into their sections, is the gathering machine, There are two types of gathering machines, the Juengst and the Sheridan. Both are American machines, and are in a state of high perfection. The Juengst is particularly effective; wire-stitching attachment, wrappering, and so-called "perfect binding machines" can be coupled on, the whole working in continuous motion up to any desired number of sections. Very few British binderies have enough work to keep more than one of these gathering machines running continually, their running speed being 3 600 books per hour.

The book is now ready for sewing. Smyth Sewers No. 3, improved type, are speedy machines for French sewn work (no tapes), also for tape-sewn books providing the work is not too heavy. Personally I prefer the Smyth No. 8 machine sewing through the tapes for the general run of work. This machine sews two up, that is, two books side by side, such as crown 8vo. novels; it is also capable of standing up to heavy work. But there are other good types of sewers and it is advisable to have a variation in plant to meet the fluctuating peculiarities of work. For instance, there is a Martini sewer which puts every other stitch higher up in the sheet. This has the effect of distributing the thread more evenly throughout the work thereby reducing the swell in the back by about half. This is of great value when sewing a book of thin paper, with many sections, and enormously facilitates nipping, for this kind of book has a knack of "running in" at the back on taking pressure.

The next operation is to nip the book. It is the first stage towards giving the work a definite uniform shape and size, which is of the utmost importance. It is absolutely necessary that all books of a job should be of equal thickness, otherwise nothing but trouble will result in all the stages of forwarding. Messrs. T. W. Sheridan have gone out seriously to cater for the efficient and quick nipping of books. It is essential to take the air out of a book in one press, that is to say, the book should be nipped all over at the same time and one nip in most cases should give the required result.

There is a point of criticism to make with regard to these nipping presses. They are of American origin and their design is the outcome of American conditions, but American work is on the whole of a more solid nature than the British. They use papers of a harder nature, with finished surface, instead of the wood pulp so largely used in this country. Consequently this kind of book is of a more solid nature before nipping and reduction in bulk after pressure is not so marked. We use extensively the spongy wood pulp paper, which bulks well, and the prevailing idea is to keep up the bulk. Thus we bring to the nipping machine occasionally a job which, nipped in say 4½ in. handfuls, is awkward to feed in because the rise and fall of the machine is insufficient. To open up the machine is obviously no remedy, as thereby one loses pressure. Perchance machine designers will notice this point.

Our next stage is to the cutting machines. Here the outstanding machine for massed cutting is undoubtedly the Seybold Automatic Book Trimmer with trough feed, conveyor delivery, and suction shaving remover. This machine is quite revolutionary in character and is equally efficient on book or magazine work. As only 4½ ins. of book are clamped and cut at a time, swell in the back if any is easily overcome. The output is 20 24 piles cut per minute, head, tail and fore-edge. Multiplying this by number of books in each pile, we arrive at output.

The Smyth 3-Knife Trimmer is also in use in several big binderies. As this machine has a comparatively large volume of books under pressure whilst cutting, it is necessary that the work should be of a fairly solid nature; swell in the back leads to trouble. Output is 700-1000 handfuls per hour. Obviously both these machines are constructed for long runs. For general jobbing book work the Seybold 3-Knife Trimmer wants a lot of beating. The single knife guillotine cutter for book work is a back number, though of course indispensable for cutting up sheets, plates, etc.

(*To be Continued.*)

Notes and News.

The Lock-Out and Strike.

There must have been very widespread relief in the bookbinding trade, when the week end brought the news that the dispute had been brought to a settlement. Early in the week there was every indication of a serious crisis. The circular issued by the Federation of Master Printers was worded so strongly as to leave no doubt regarding the menace with which the trade was threatened. All the elements of a dangerous situation were present in the position of affairs at the commencement of the week. Although there was no dispute, no quarrel and no difference of opinion between the employers' federation and any of the 23 unions except the odd one or two, there was, behind it all, the fact of the National Agreement, and also something of an alliance between a number of unions. So long as the National Agreement is preserved intact, the whole industry is safeguarded for both sides. The machinery has been laboriously devised to retard and as far as humanly possible prevent sudden or spasmodic lock-outs and strikes. If loyalty to the Agreement is an assurance of peace and constitutional progress for all concerned in its working, disloyalty, on the other hand is a direct menace to the whole of the allied industries. Sectional direct action, whether undertaken by employer or employee, by association or by union must inevitably bring the printing and allied trades of the whole country face to face with calamity.

Reviving Trade.

There are signs of reviving trade in the bookbinding industry, and reports from the principal centres are fairly good. Both on the letterpress and stationery side the volume of orders appears to be growing larger. Some good contracts have been placed by banks, corporations and the leading public companies. The binders' chief complaint is that co npetition is so very keen. It behoves employers to study costs very carefully. The true knowledge of cost of production based on recorded data and current expenses often turns the scale between loss and profit. There are still too many bookbinders whose methods of arriving at cost are out of date. Unfortunately these non progressive establishments, with their haphazard lack of system, harm not only themselves but their more efficient fellow employers also. Much of the low-priced work of to-day has been brought about by the ignorance of bookbinders on the subject of cost of production and how to arrive at it.

Bindery Costing.

Much is made of the difficulty of arriving at bookbinding costs, but the arguments are no stronger or better founded than those advanced in the early days by printers who are now praising the Costing System and claiming priority over their *confreres* in the matter of working it out to finality. There is no room for arguments from small or large establishments when the most progressive and the most reputable among both large and small bookbinders have adopted the official Costing System and would not under any consideration revert to early crude ideas of conducting that side of the business.

Leather Prices.

Prices of bookbinding material are keeping steady, with leathers on the firm side. For good quality skins the following prices are being paid: Rough goat, 1s. per square foot; rough calf, 1s. 6d. to 1s. 9d.; rough morocco, 1s. 3d.; fair calf, 2s.; coloured calf, 2s. to 2s. 3d.; thin coloured basils, stained, 7d.; ditto, dyed, 8d.; stout basils, 9d.; buff basils for half-binding, 7d.; ditto, for full binding.

Digitized by Google

9d. to 10d.; fair basils, 10d.; diced basils, 1s.; grained basils, 9d.; skivers, 6d. to 7½d.; grained skivers, 7d. to 8d.; H.G. morocco, 1s 9d.; Levant morocco, 1s. 9d.; Levant goat, 1s. 6d.; H.G. goat, 1s. 9d. to 2s.; pigskins, 1s. 3d. to 1s. 9d., according to quality; Anglo-Russias, 1s 9d.; Persian calf, 1s. 3d.; P.G. roan, 7d. to 8d.

Miscellaneous Supplies.

Gold leaf is quoted on the basis of 48s. 6d. per 1,000 leaves, 22 carat, 3¼ in. square, or 60s. 6d. per 1,000 for 4 by 3¼ in. Best imitation gold leaf is obtainable at 25s. per 1,000 sheets. 5 in. by 5 in. Calicoes vary between 4d. and 6½d per yard, a very fine lining quality being offered at 5¾d. Glues remain firm, the price for high grade skin glue standing at 45s. per cwt. Bone glues are to be secured at 30s. to 35s. per cwt. Millboards are quoted 28s. per cwt. for fine quality machine-made grey; 36s. per cwt. for black hand made.

Dutch Strawboards.

Dutch strawboards are quoted £9 per ton from store, carriage forward for half ton lots, with the usual extras for substances over 1⅛ lb. Recent imports have been heavy, and stocks are good. The approach of mild weather should bring a slight easing in price, but mill quotations are not yet reduced.

Commendable Book Cloths.

Samples of book cloths have reached us from the producers, Messrs. Bentley, Smith and Co., Ltd., of 2, King Edward-street, E.C., and we have subjected them to practical test. They are of exceptional value, and stand quite apart from the usual run of cheaper book cloths, which have little else beside low price to recommend them. The new B. and S. book cloths are certainly low priced, but they possess the strength, firmness, closeness of texture and suitable surface demanded by the bookbinder. Prospective users should investigate for themselves by securing the pattern books showing the various grades, colours and finishes produced.

Unemployment Statistics.

Official reports furnished to the Ministry of Labour show that employment in the paper trade registered a further improvement during February, and was generally described as fair, though bad in the wrapping section. The mills were still working irregularly in some districts, owing to a shortage of orders. In the letterpress printing trade employment was fairly good, and rather better, on the whole, than in January. London and Manchester were included among those centres reporting an improvement; at Birmingham, however, there was a decline, and employment was only moderate at Edinburgh. With electrotypers and stereotypers employment was again good. With lithographic printers employment continued fair generally. It was, however, reported as bad and worse than in January at Manchester and Glasgow. Employment with lithographic artists was reported as fair in London and slack at Manchester. In the bookbinding trade employment was again moderate generally; there was a slight improvement in London and Edinburgh, but a decline at Liverpool and Leeds. The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 6·0 at February 23rd, compared with 5·9 at January 26th and 6·2 at February 25th, 1924 In the paper and paperboard industry the percentage was 7·5 at February 23rd, compared with 7·5 at January 26th and 9·6 at February 25th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 7·2 at February 23rd, compared with 7·9 at January 26th and 7·6 at February 23rd, 1924.

Messrs. J. M. Dent and Sons, Ltd., the London publishers, have just issued the first number of the *Bookmark*, a neat little quarto quarterly containing well-written and illustrated articles about recent books issued by this famous house.

In the King's Bench Division on Friday Sergeant Sullivan, K.C., was granted a rule *nisi* for a writ of attachment for contempt of court, returnable for April 6th, against the editor, publisher, and printer of the *People* in publishing articles relating to William Cooper Hobbs, who was sentenced to two years' hard labour at the Central Criminal Court, and whose appeal is now pending.

Special Machines in the Bindery.

The New Wage Rates.

The following is the schedule of rates for special power machines agreed in the recent settlement. These rates are to be embodied in the National Agreements designated No. 5, for Bookbinders and Machine Rulers and No. 4 Male Members' Agreement, N.U.P. & P.W.

Binding Machines.

(Combination):

(*a*) *Perfect Binder* (gatherer, back cutter, rougher, muller wrapperer). Manager (Provincial) ... 20s. 0d.

(*b*) *Gatherer, Wire Stitcher and Wrapperer.* Manager (Provincial) 10s. 0d. Where an Assistant is employed the rate shall be 5s. above Class III.

Single:

(*c*) *Wrappering only* (back cutter, rougher, muller and wrapperer) Manager (Provincial) 10s. 0d.

(*d*) *Wrappering only* (wire stitcher and wrapperer) Manager (Provincial) 5s. 0d.

Mercer or Similar Gathering Machines.

Up to and including 25 boxes to be excluded from this Agreement.

Above 25 boxes:

	One Machine	Two Machines
Provincial—above Class II	2s. 6d.	7s. 6d.
London	5s. 0d.	10s. 0d.

Where two machines of any size are being worked in close proximity a man shall be in charge at above rates.

Folding Machines

(completely automatically fed)
One or two folds excepted.
All Sizes.

Pile Self Feeders:

	One Machine	Two Machines
Provincial—above Class II	3s.	4s.
London	5s.	7s.

Continuous:

Provincial—above Class II	4s.	5s.
London	6s.	8s.*

Where an assistant is employed he shall be paid not less than the Bench Rate in London and in the Provinces, Class III Rates.

Only to apply to machines at present on the market or in use.

* In London, 2s. for every additional machine.

Cutting Machines

Three and Four Pile Friedheim:

Operator (Provincial) above Class I 5s. 0d.

Assistant (Provincial) above Class III 2s. 6d.

Krause and Seybold (Striker):

Provincial ... ... 2s. 6d.

London ... ... 8s. 6d.

Seybold Trimmer:

Operator—Provincial ... ... 10s. 0d.

London ... ... 25s. 0d.

Assistant (Second Hand):

Provincial—above Class III ... 5s. 0d.

London ... ... 10s. 0d.

Smyth Trimmer:

Provincial ... ... 2s. 6d.

London ... ... 5s. 0d.

Gauge Perfectas:

Provincial ... ... 2s. 6d.

Strip Back Lining:

Provincial ... ... 5s. 0d.

London ... ... 7s. 6d.

Blocking Machines:

Vertical Miehle and Miller Feeder:

London ... ... 9s. 6d.

These advances are on minimum rates.

Where higher rates are now being paid there shall be no reduction.

This Agreement becomes operative on pay day of the week ending April 4th, 1925.

Mr. Charles James Cropper (72), J.P., of Ellergreen, near Kendal, Westmorland, chairman of James Cropper and Co., Ltd., a director of the London and North-Western Railway Co., the Birmingham Canal Navigation, the Cockermouth, Keswick, and Penrith Railway Co., and the Dundalk, Newry, and Greenore Railway Co. left £59,850 unsettled (net personalty £16,422).

JUST PUBLISHED.

The Price Book

1925

FOR THE PRINTING & ALLIED TRADES

4th EDITION, enlarged and brought up to date.

By F. G. SHEPARD.

540 pages. Price 5/6 post free Contains an immense amount of information useful to Master Printers, Managers, Estimating Clerks and Overseers; the prices of materials, work, etc., being given in every department, for London and the Provinces. Also includes a very complete list of Watermarks of paper.

Copies may be had from the Publishers:

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE. — Balance dividend of 3½ per cent., making 6 per cent. for the year to March 31st, 1925, against 5½ per cent. for the preceding year. Warrants will be posted on April 30th.

WINTERBOTTOM BOOK CLOTH CO. — Proposed dividend of 10 per cent. and bonus of 6¼ per cent., less tax, on ordinary shares, payable April 1st, making 23¾ per cent.; £25,000 to depreciation fund; £2,500 to workpeople's benefit fund; £97,222 to reserve; £103,663 forward. (Last year 7½ per cent. and bonus of 3¾ per cent., making 16¼ per cent. for year; £25,000 to depreciation fund; £2,500 to workpeople's benefit fund; £99,050 to reserve; £79,296 forward).

ASSOCIATED NEWSPAPERS, LTD.—Interim dividend on deferred shares for quarter ending March 31st, 1925, of 2s. per share (at the rate 40 per cent. per annum), less tax. Warrants will be posted on April 7th.

LAMSON PARAGON SUPPLY CO.— Profits for the year ended January 31st last, including dividends from subsidiary companies and E.P.D. refunded (£12,893), amounted to £62,423, against £64,526 for the previous year, to which has to be added £10,329 brought in, as against £8,509 last year. The preference dividends amounted to £35,396 (the same), and the dividend proposed on the ordinary shares, 5 per cent. (the same), will require £20,000. The directors further recommend the transfer to investment reserve of £5,000 (against £3,310 to investment reserve and £4,000 to removal expenses), making the investment reserve £35,000 and leaving a carry-forward of £12,356 (against £10,329 last year).

W. AND A. K. JOHNSTON.—Net profit for 1924, after charging depreciation, etc., was £3,401, and £2,409 was brought in, making £5,810, which directors recommend should be carried forward. Net profit for 1923 was £5,136, including £1,371 taxation refund and £178 brought in. Balance of preference dividend for 1922 was paid.

NEW COMPANIES.

BOSCOMBE PRINTING CO., LTD. — Capital £10,000. in £1 shares; to acquire the business of printers and bookbinders carried on by A. J. Abbott and E. T. Hames, at Palmerston road, Boscombe, Bournemouth, to adopt an agreement with the said A. J. Abbott, relating to the purchase of freehold property in Haviland-road, Boscombe, etc. Private company. Subscribers: A. H. Abbott and S. W. Killinger. Solicitors: Litchfield and Kusel, Palace chambers, Bridge-street, S.W.1.

M. F. ROBINSON AND CO., LTD.—Capital £7,000, in £1 shares; to acquire the business of a printer, bookbinder, account book maker, stationer, dealer in and maker of fancy goods, magazine and book proprietor and publisher, now carried on by F. Robinson, at 56 and 57, High-street, Lowestoft, as "F. Robinson and Co., The Library Press, Lowestoft." Private company. First directors: F. Robinson, Miss Mona S. Robinson and A. F. Goffin. Registered office: 56 and 57, High-street, Lowestoft.

MILNES (LENHAM), LTD.—Capital £5,000, in 2,500 ordinary shares of £1 each and 500 preference shares of £5 each; to carry on and develop the business of a general agent carried on by C. H. Milnes at London, Lenham (Kent), and elsewhere, and to carry on the business of printers, stationers, lithographers, designers, draughtsmen and producers of any written, engraved, painted or printed productions, publishers, advertising agents, show card manufacturers, designers of advertisements, newspaper proprietors, etc. Private company. Subscribers: G. Robeson and H. E. Morgan. First directors: G. B. Robeson and H. E. Morgan.. Registered office: The Factory, Lenham, Kent.

TYPARY AND TYPON CO., LTD.—Capital £5,000, in £1 shares; photographic printers, lithographers, engravers, die-sinkers, etc. Private company. First directors: B. A. Holland, H. Kessler and W. Dandridge. Registered office: 1-4, Red Lion-passage, Fleet-street, E.C.

J. MAWDSLEY AND SON, LTD. — Capital £6,000, in £1 shares (1,000 preference and 5,000 ordinary); to acquire the business of a printer and stationer as formerly carried on by J. Lawton as "J. Mawdsley and Son," at 1, Exchange-street West, 2, Water-street, 38A, Imperial Chambers, 62, Dale street, and 7 and 8 in 7, and 8 ie 9, Davies-street, all in Liverpool. and to carry on the business of advertising service and general agents and contractors, stationers, printers, etc. Private company. Directors: J. Lawton and J. H. Midgley. Solicitors: J. F. Read and Brown, Liverpool.

H. WOODWARD (GOLDBEATERS), LTD.— Capital £1,000, in £1 shares; to adopt an agreement with H. Woodward, and to carry on the business of manufacturers and agents of English and foreign gold leaf, ribbon gold leaf and silver, copper, aluminium and all other metallic gold and shellac metallic leaf, gold, silver, copper and other metal size, leaf blocking and other foils, bronze powders, etc. Private company. Directors: W. Fearnley, H. Woodward and H. Fearnley. Solicitor: R. Mills Roberts, 21, Harrington-street, Liverpool.

UNITED AUTOMATIC SIGNS, LTD.—Capital £2,500, in £1 shares; manufacturers of electrical and other advertisement devices, advertising contractors, printers, etc. Private company. Directors: T. Bennett and J. Andrews. Registered office: 146A, Queen Victoria-street, E.C.4.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

SPICERS AND DETMOLD, LTD. (manufacturing stationers, paper merchants, etc., office London).—Satisfaction in full on March 20th, 1925, of debentures dated January 3rd, 1896, shown in statement under Section 12 of Companies Act, 1907, as created December 10th, 1895, securing £15,000.

L. UPCOTT GILL AND SON, LTD. (printers, etc., London).—Issue on March 2nd, 1925, of £470 debentures, part of a series already registered.

PETERBOROUGH PRESS, LTD.—(a) mortgage on printing and publishing offices in Cross-street, Peterborough, dated March 13th, 1925, to secure £300. Holder: G. E. Knight, The Laurels, Houghton, Huntingdon. (b) second mortgage on same property dated March 14th, 1925, to secure £200. Holder: G. T. Vawser, 36, All Saints-road, Peterborough.

BARCLAY AND FRY, LTD. (stationers and printers, etc., Southwark).—Particulars filed on March 19th, of £50,000 debentures, authorised January 6th, 1925, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £22,500.

JOHN WADDINGTON, LTD. (printers, etc., Leeds).—Satisfaction to the extent of £1,000 on October 1st, 1923, and to the extent of £2,000 on October 1st 1924, of mortgage dated September 28th, 1922, securing £25,000.

RECEIVER APPOINTED OR RELEASED

SUTLIFFS, LTD. (bookbinders, etc., Clerkenwell). — H. Edgelow, of 11, Albion place, Clerkenwell, E.C., was appointed receiver and manager on March 16th, 1925, under powers contained in mortgage debenture dated October 14th, 1924.

SOPER AND WHEELER, LTD. (stationers, printers, etc., Brighton).—E. C. Baldwin, of Union Bank Chambers, 8, North street, Brighton, was appointed receiver and manager on March 16th, 1925, under powers contained in first mortgage debentures dated June 23rd, 1923, and May 1st and 22nd, 1924.

CLERKENWELL FOLDING BOX CO., LTD.—J. Mattice, of 7, Princes-street, Cavendish-square, W.1., ceased to act as receiver or manager on August 5th, 1924. (Notice filed March 20th, 1925).

BANKRUPTCIES, etc.

Re JOHN FREDK. ATKINSON, publisher, late of 31, Essex-street, Strand.—An application for an order of discharge was made to Mr. Registrar Hope at the London Bankruptcy Court, on behalf of this bankrupt who failed in April, 1923, with liabilities £1,545 and assets £3 3s. Mr. E. Parke, official receiver, reported that the bankrupt took offices at the above address in 1920, and there compiled and published books of reference entitled *The Motor Car Index*, *The Motor Cycle Index*, *The Commercial Motor Index* and *The Special Insurance Edition*. The bankrupt attributes his failure to the loss of an action brought against him by his publishers for printing work done on his behalf. The offences reported by the official receiver were (1) insufficiency of assets to equal 10s. in the £ on the amount of the liabilities; (2) omission to keep proper books of accounts; and (3) trading with knowledge of insolvency. His Honour upheld the official receiver's report and suspended the discharge for two years.

Re THOMAS SAWER (trading as Thomas Sawer and Co), paper agent, 10-12, Ludgate-hill, E.C.—This debtor attended before Mr. Registrar Mellor at the London Bankruptcy Court on March 24th for public examination upon accounts showing liabilities £2,377 and assets valued at £80. In the course of his evidence, the debtor stated that he originally commenced bnsiness in Norwich in 1900; the trading was successful until 1915, but was then adversely affected by the war and the business was closed down. He was next employed by a firm of manufacturing stationers till October, 1922, when he resumed business on his own behalf. In February, 1923, he was joined in partnership by a friend and they started as agents and importers at 10-12, Ludgate-hill, under the style of Thomas Sawer and Son. The firm traded successfully until February, 1924, when the partner retired under an agreement that he was to be paid £282, plus 5 per cent. interest per annum. Witness continued the business alone, but owing to difficulties arising from late and in some cases non-delivery of goods by the manufacturers and also to the goods not being up to sample, a number of his principal customers closed their accounts with him and his business was seriously affected. In August, 1924, witness entered into a contract with a firm in Hamburg to deliver to his order 100,000 silk-lined boxes, which on delivery were found to be not up to sample, and had to be returned to the manufacturers after having been totally rejected by his customers. As a result, witness lost his profit of about £700 on the transaction. The examination was concluded.

Stationers' Examinations, 1925.

Technical Board's Arrangements.

The Stationers' Company & Printing Industry Technical Board, at a recent meeting, decided to extend the scope of their examinations. Suggestions have been made that these examinations should be extended to the provinces, and the Technical Board will, at an early date, have under consideration a scheme for this object.

The following are the dates upon which specified examinations will be held:—

Subject to a sufficient number of candidates making application, the Stationers' Company & Printing Industry Technical Board will arrange for examinations in the following sections of the printing industry at Stationers' Hall on—

Monday, 27th April, at 6.30 p.m.: Costing, Printers' Assistants, Cylinder Machine, Binding (Women).

Tuesday, 28th April, at 6.30 p.m.: Paper, Linotype, Warehouse, Estimating, Stereo & Electro, Monotype.

Wednesday, 29th April, at 6.30 p.m.: Composing.

Thursday, 30th April, at 6.30 p.m.: Binding, Lithography, Reading, Order Clerks, Platen Machine.

The Technical Board awards certificates, medals and prizes on the result of the examinations, but a candidate having obtained a first-class certificate or prize is not eligible for a similar award in the same section. Candidates submitting themselves for examinations must have attended a recognised course of technical instruction. An entrance fee of 1s. 6d. has to be paid by each candidate.

There are two grades of examination: (a) Technical Certificate; (b) Craftsman's Certificate.

Technical Certificate.

In the Composing, Machine, Lithography, Bookbinding, and Stereo and Electro examinations, the following conditions must be observed:—Candidates must be between the ages of 18 and 21. It is recommended that candidates should not present themselves for examination until they have attended at least a third year's course of instruction at a technical school. The medals of the Worshipful Company of Stationers are awarded on the results of these examinations.

Craftsman's Certificate.

Candidates must be (1) over 21 years of age; or (2) the possessor of a first-class Technical Certificate awarded by the Board. In all craft sections candidates must bring with them to the examination an example of practical work certified by their instructor or overseer that it is the work of the candidate. Examinations may be arranged for elementary and advanced students in sections not specifically mentioned under (a) and (b).

Applications and entrance fees must reach the Hon. Secretary at Stationers' Hall not later than 14th April, 1925.

Following the lines of previous years, a Students' Reunion will be held at Stationers' Hall on Friday, 1st May, when a programme including dancing, music and cards, will be arranged. Particulars can be obtained at Stationers' Hall or from instructors at the various technical schools.

German exports of industrial machinery for the first half of last year totalled 44,079 metric tons. Receipts by Great Britain were limited to bookbinding and mining machinery, in each of which she was the largest importer, bookbinding machinery figuring at 204 metric tons, while mining machinery received totalled 141 tons.

Henry Roser, a compositor, who threw himself from a window, was said, at the inquest at the North Middlesex Hospital, Edmonton, to have been depressed since an attack of sleepy sickness a year ago Verdict, suicide while of unsound mind.

At the inquest in Bury recently on Richard Carter, a backtenter at the paper mill of Crompton's (Stubbins), Ltd., who died following an accident at the mill, a verdict of accidental death was returned. Deceased had been brushing a felt, and was found with his arm up to the shoulder fast between a felt roller and a cylinder.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Sweden.

A commission agent resident in Gothenburg, who is a British subject, and now on a visit to the United Kingdom, desires to secure the representation for Sweden of British manufacturers of wallpapers, etc. (Reference No. 346.)

Switzerland.

An agent established in Davos-Platz is desirous of obtaining the representation of British manufacturers for the sale in Switzerland of stationery (writing and drawing), etc. (Repetition of Reference No. 160.) (Reference No. 348)

As the result of a conference in Toronto between representatives of the Montreal, Toronto and Western Ontario Typothetaes and paper merchants of Ontario and Quebec, it is possible that the paper merchants may accede to the requests of the Typothetae members, and retain the use of the Long Price List.

The capitalisation proposals are being considered by the International Paper Co. U.S.A., for the purpose of acquiring the Riordon and Gatineau properties in Canada. The Canadian International Co. so formed will own upwards of 12,000 square miles of timber limits in Quebec, together with the Kipawa and Hawkesbury bleached sulphite mills with an aggregate daily capacity of 300 tons, and the Three Rivers news-print mill with a present daily capacity of 320 tons now in process of enlargement to a capacity of about 500 tons a day. It is understood that the design of the Three Rivers mill provides for ultimate doubling of the present capacity, bringing the total capacity of that mill when finally developed to 650 tons a day.

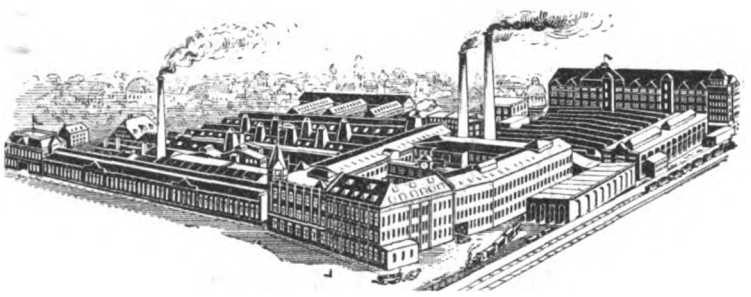
A Famous Leipzig House.

The Karl Krause Engineering Works.

The German town of Leipzig has attained world-wide fame not only as the centre of German book-production, but also as the main seat of numerous concerns occupied with the manufacture of machines and appliances for the printing and allied trades. In this line of engineering the works of Karl Krause, Leipzig, are an outstanding feature. The history of the Krause works is also the history of the technical development of the graphic arts.



When, after the invention of the paper-making machine and of the high-speed printing-press, which took place about 100 years ago, the possibilities of manufacturing and using paper became greater, the demand for paper-working machines made its appearance. First of all it was the paper cutter, intended for dividing paper sheets or for trimming them into any desired size, and it was in 1855 that Karl Krause placed his first machine of this type on the market. Encouraged by growing success, Karl Krause soon extended his sphere to the manufacture of all kinds of paper-working machines, used for cutting, embossing, gold blocking, pressing, printing, punching, hole-drilling, bevelling, slotting, hole-punching, rotary creasing, grooving, scoring and round-cornering of paper, cardboard, and similar material. Ingeniously designed construction, the use of high-class materials and best workmanship secured to Krause machines an ever-increasing importance and popularity. Under the energetic management of Privy Councillor Heinrich Biagosch, the late head-manager, whose sudden death was announced in April last, the business relations of the Krause Works became more and more world-wide At the end of the nineteenth century Karl Krause already employed more than 1,000 hands, and the following years until the outbreak of war saw a further surprisingly quick growth. At present the hands employed number as many at 1,700 and the number of machines despatched annually exceeds 7,000. The total number of machines manufactured up till now is no less than 175,000.

The manufacturing plant of the Krause works is situated in the eastern suburbs of Leipzig, called Anger-Crottendorf, close by the railway line Leipzig-Hof. It comprises a territory of about 100,000 square yards. There are over three floors of brightly illuminated halls, conference-rooms, private offices and drawing offices, in which intercourse with the paper-working industry of the whole world is organised and maintained, and from which impulsive force is provided for the very extensive workshops adjoining.

The original design of the Krause machines is contained in the models which, sketched out in the drawing offices, are put in shape in the joinery workshops, and so initiate the practical development of the machines. The first stage in manufacturing is the casting department. In two large halls gigantic melting furnaces transform the crude pig-iron into a red glowing fluid to be poured into the mould. The product of the foundryman, however, has a rather ugly appearance and is full of rough edges and imperfections, entirely unsuited for building up a nicely-joined machine. It has therefore to be treated by chisel, hammer and file and by numerous metal-working machines of most varied character, standing in rank and file in a hall of vast dimensions, covering more than 10,000 square yards of floor space. Here, as if guided by an invisible hand, the crude unshapely casting is transformed into an individual machinery part, which after planing, milling, turning and drilling, receives its ultimate shape and finish.

The finished single parts are then transported into the spacious fitting halls, which seem to be strewn over with bright pieces of iron in apparent confusion. But soon it can be seen how part is joined to part, and what had been looked upon as confusion is seen to have been well ordered, as parts take shape more and more, gradually growing into a well-formed, complicated machine. Travelling cranes move to and fro in the spacious halls, in one place joining together heavy machinery parts, in another carrying up thin structural limbs which are essential to give the whole machine stability and support. Thus everything grows into perfection, and the visitor is able finally to inspect the finished machines in the exhibition rooms, where all the special lines which have given world-wide fame to the name of Krause can be seen in operation.

As a concluding word, mention may be made of the "welfare" organisations which allow the many hundreds of employees, busy at the vice or at the desk, to find after their strenuous labour relaxation and recreation. These organisations were mainly called into existence by the late head manager, Privy Councillor Heinrich Biagosch. Among the sanitary arrangements is a large and modern bathing hall, with swimming-pool, equipped in the latest style. Garden colonies procure for a considerable number of employees the charm which the possession of a garden creates. Then there are libraries and lecture-rooms as well as the large dining-rooms, whilst the organisation of a fire-brigade and the provision made for employees' insurance likewise bear witness of a generous social policy, which is aimed at securing the welfare of, and establishing a sense of unity and harmony amongst, all employees concerned in the works.

General View of the Works of Karl Krause, at Leipzig.

Paper Trade Golfing Society.

Fourth Annual General Meeting.

Mr. E. H. Raynham presided at the annual meeting of this Society on March 17th, when there were present: Messrs. W. C. Powers, A. Dykes Spicer, George Buchanan, E. C. Lait, J. Macnaughton, L. C. Lewsey, R. H. Calcraft, N. H. Leander, P. W. Kennett, A. S. Batchelor, T. T. Mackenzie, J. W. S. Johnston, and the hon. secretary.

1924 Report.

In presenting the report of the Committee for the past year, the hon. secretary said that record entries had been obtained at all meetings.

After referring to the various competitions held during the year and reported in our pages at the time, the report mentioned the Inter-team Competition for the Alliance Challenge Cup and for the Blades Challenge Salver which took place at Walton Heath, the following teams entering for the competition:—The London Press Golfing Society, the Newspaper Golfing Society, the Printers Golfing Society, the Carmelite Golfing Society, the Fleetway Golfing Society, together with this Society.

Six players scored for each team, and the best aggregate returns were: The Newspaper Golfing Society (winners) 542, London Press Golfing Society 543, with the Paper Trade Golfing Society third with 545. The best scratch scores were returned by Mr. C. B. Macfarlane and Mr. A. J. Mitchell. Captain Edward Jefferson won the Blades Challenge Salver, presented by Sir. Rowland Blades and Mr. Alfred Blades, with a score of 1 up.

At the beginning of the season, Mr. Harding presented a prize in the form of a silver cigarette box to be won by the player returning the best score at any two meetings of the Society during the year, and Mr. W. C. Powers is to be congratulated on winning this prize with the splendid score of 4 up on the scratch scores of the courses concerned.

The membership of the Society now stands at 204.

It is with deep regret that the Society has to record the deaths of Sir Frederick Bowater, K.B.E., Mr. H. Godfrey, Mr. A. King Smith and Mr. W. G. Stocker.

In conclusion, thanks were expressed to the Committee for the immense assistance which they had given in connection with the management of the Society, which has been carried out with such perfect smoothness.

The members were also grateful to Mr. Harding for the manner in which he captained the Society during the year, and in this connection reference was made particularly to the Captain's Prize which he had so kindly presented to the Society and to the presentation by him of the Alliance Challenge Cup, the competitions in connection with which were proving such an immense success.

The report, together with the statement of accounts submitted by the hon. treasurer (Mr. Raynham), were unanimously approved and adopted.

Office Bearers for 1925.

The following were unanimously elected:—Captain, Mr. W. C. Powers; hon. treasurer, Mr. E. H Raynham; hon. secretary, Mr. R. G. Harvey Greenham; hon. auditor, Mr. William Oliver.

Committee.—In accordance with Rule 5, the following retain office during the ensuing year: Messrs. P. B. Burn, A. J. Evans, E. C. Lait, L. C. Lewsey and G. W. Shilcock, and the undermentioned were unanimously elected to fill the vacancies occurring: Messrs. Keith Barlow, P. W. Kennett, J. W. S. Johnston, T. T. Mackenzie, W. Sommerville.

Vice-Presidents.—Sir George Thompson Hutchinson and Mr. S. A. Harding (the retiring Captain) were unanimously elected vice-presidents of the Society.

Annual Dinner.—This will be held at the Trocadero Restaurant, Piccadilly, at 7 for 7.30, on Wednesday, April 29th.

Fixtures for 1925.

The following arrangements were unanimously approved:—Tuesday, April 28th, Spring Meeting, Addington; Thursday, June 11th, Alliance Challenge Cup Competition; Friday, June 12th, Match *v.* The Printers' Golfing Society; Wednesday, June 24th, Summer Meeting, Walton Heath; Thursday, October 8th, Autumn Meeting, Moor Park.

Captain's Prize.—Mr. Powers very kindly offered to present a Captain's prize to be competed for on the same condition as the captain's prize presented last year by Mr. S. A. Harding.

A unanimous vote of thanks was passed to Mr. S. A. Harding for the manner in which he had captained the Society during the year, particular reference being made to the presentation by him of the Alliance Challenge Cup.

A unanimous vote of thanks was passed to Mr. Oliver, the hon. auditor, and to Mr. Greenham, the hon. secretary, for the work which they had done on behalf of the Society.

New Inventions

Photographic Printing.

Mr H. V. Lawley's invention consists in a controlling switch device of the kind described in Specification 180,189 modified to function more particularly in connection with printing apparatus described in Specification 220,009, and electric circuit connections including said switch device, an electric motor g for operating said printing apparatus, a print ng light b and a contact member g_4 by means of which the motor g is started, the printing light b illuminated for a definite period, and a grading light b_2 then illuminated and the motor stopped, all said functions being performed automatically. The controlling switch device has a keyboard with keys 1 9 for closing the printing light circuit for different light intensities, a key M controlling the motor circuit and an "off" key for causing return of all the armatures i of the controller to normal. On pressing one of the keys 1 9, say the key 2, the device is operated auto-

matically as follows: The circuit from a battery l^0 is closed through magnet i^2, No. 2, series connection l^7, magnet i^2, No. 10, which is in series with the magnets of all the other armatures i, conductor l^5 and armature release magnets i^3. The armatures i of the two magnets i^2 are attracted and bridge the circuit between their pairs of mercury cups i^1. The motor circuit is thus closed from the main supply j through conductor j^1, motor g, conductor j^2, mercury cups i^1 of armature No. 10, and conductor j^4. During the first quarter of the rotation of the motor, the paper is moved into printing position and the printing light circuit completed from the main j, by the contact segment 4^a on the contact drum g^4 rotated by the motor, through conductor k, fixed test resistance k^1, lamp b, conductor k^2, contact 4^a, conductor k^3, variable resistance k^4, and mercury cups i^1 of armature i No 2. At the end of the third quarter of the revolution the printing light circuit is broken and the circuit of the red grading lamp b^2 is completed by the contact segment 3^a, the paper being now raised out of printing position and automatically fed forward. During the last quarter of the revolution the armatures i are returned to normal by a contact segment 2^a momentarily closing a circuit through the armature release magnets i^3 an auxiliary motor circuit being meanwhile provided through a contact segment 1^a and conductor j^3. At the end of the complete revolution the auxiliary motor circuit is broken and the motor g stops leaving the red light b^2 in.

Stencil Sheets.

A patent application has been made by Mr. D. Smith relating to stencil sheets. In the production of coated sheets for conversion by impact into stencils for use in duplicating, a porous base, such as yoshino paper, is treated with a cellulose composition and, preferably subsequently, with tempering and coagulating agents. Viscose is prepared by soaking cotton in caustic soda or other alkaline solution for 24 hours, expelling surplus moisture, standing the cotton in a closed vessel for 48 hours, adding carbon-bisulphide, stirring for four hours and then adding caustic soda solution. The mass is now dissolved in water and is wholly or partly neutralised by the addition of an organic acid such as malic, butyric or malonic acid. The tempering agent comprises glycerine and water together with a small amount of a sulphonated oil such as Turkey red oil. A coagulant such as formaldehyde may be added to this bath. The sheet is drawn over the viscose solution, dried and then drawn over the tempering and coagulating solution. If required, the surface of the sheet may be moistened before use with water or with water and glycerine.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Applications.

Batcock, C. E. Mechanism for feeding paper, etc. 7,684.
Bolton, F. Reproduction of pictures, etc., in colours. 7,458.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE is undoubtedly at the present moment very grave depression, at all events, in certain sections of the paper trade. It may be that at the "news" mills and some of the printing plants the order books have been fairly well filled, but there is a particular cause for this, namely, the preference which Australia has granted to British paper. But for this fortuitous and gratuitous circumstance one trembles to think what would be the position of the British paper mills to-day. There is, however, no certainty that this market will much longer be free from severe competition. The extension of the preference to Canada is still in the air, and once this comes into operation, the whole position in the Commonwealth, so far as British papers are concerned, will be materially changed.

SOME of our leading papermakers and merchants are showing increased activity in the matter of advertising, and, in fact, some really worthy examples of publicity have been produced. The point cannot be stressed too strongly that where direct propaganda is concerned, the best results are secured when professional assistance is engaged. The compilation of selling copy, the arrangement of matter and design, and the general structure of any given piece of advertising literature: these are factors calling for the experience of accumulated test and data such as can only be acquired by regular practice. Toward modern business development the professional printer and advertising consultant stands in much the same relationship as does the architect to the builder. The plans may add to initial outlay, but they are a reasonably sure guarantee of economical procedure and safety in the process of construction. In the past, papermakers and merchants' direct advertising has been not only meagre but uninspired. Mainly, sampling has been deemed a sufficiency in itself, supporting, of course, the energies of the sales staff. Times are changing and paper sellers' methods are changing with time. It is fast being realised that press advertising must not only be more wholeheartedly indulged in as the cheapest and most efficient way of keeping a name before the trade, but that it must be supplemented according to circumstances by literature placed direct in the hands of prospective and established customers.

WE have received from Messrs. T. H. Saunders and Co., Ltd., a little folio of samples of mould and hand-made paper samples, attractively got up and well printed. In particular a quarto leaf of cream laid mould-made book paper printed in black and red demonstrates the influence of good paper on the books. Apart from bringing out the best that is in typography, the character of the paper itself is a factor in creating an atmosphere.

Papermakers' Association.

Trade Reviewed at Annual Meeting.

Mr. C. R. Seddon, J.P., presided at the annual meeting of the Papermakers' Association held on Thursday, March 19th, at the Association offices, Farringdon-street, London.

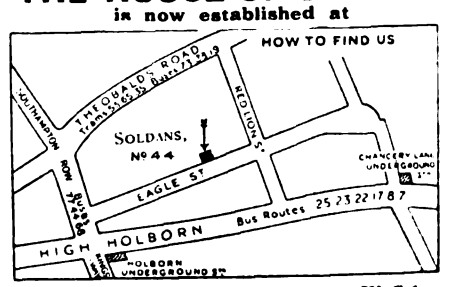
Following the adoption of the minutes of the previous meetings, Mr. A. W. Foster, the secretary, in the course of his report said:—

Trading Conditions.

The trade depression which characterised the previous year continued to prevail during 1924, the sixtieth year from the formation of the Scottish Papermakers' Association, the oldest of the organisations now amalgamated into your Association. The dislocation of European industry caused by the war conditions and their aftermath, the continued depreciation of international currency, and the consequent impoverishment of customer nations, acted as a steady discouragement of world commerce, and papermaking, dependent as it is on the prosperity of general trade, suffered accordingly. It is unfortunately necessary to record that the financial strain of the past few years has entailed the closing down of a number of firms of long standing and unblemished record, and in several instances there is little or no hope that their mills will ever re-open.

The official figures published by the Ministry of Labour showing the number of workers in receipt of unemployment benefit stood at 4,387 at the end of December, 1924. This compares with 5,046 on the corresponding date in 1923, but during the year it had been as high as 7,938 and as low as 3,942. The number of insured workers in the industry (excluding paper-stainers) is stated by the Ministry as 39,920 males and 14,690 females, a total of 54,610, being a reduction of 1,950 since 1923, and the percentage unemployed at the end of the year was 7·7. This compares favourably with a percentage of 10·8 for all industres, but is not so good as that in the allied trade, bag, box and stationery manufacture being 6·3, and printing only 4·9. It must be remembered, when comparing the papermaking figure with those of allied trades, or with the general figure of 10·8 per cent. for all insured industries, that the papermaker when short of orders does not close down his mill if he can possibly avoid it, but runs on short time, retaining his workers in employment. Consequently bad trade in papermaking is not to be judged by the numbers unemployed at a given moment.

Overseas Trade.



The quantity of paper exported showed a further increase, the tonnage being maintained at its high level owing to the preferential tariff operating in Australia. The quantity of news-print paper exported to Australia during the year was 73,260 tons, out of the total of 237,897 tons shown in the following table:—

TOTAL EXPORTS OF PAPER AND MANUFACTURES (TO NEAREST TON).

	1913.	1922.	1923.	1924.
January	16,147	7,345	16,763	17,863
February	14,416	5,960	19,298	13,790
March	14,139	6,896	15,029	17,777
April	15,295	6,908	18,001	16,585
May	14,932	7,782	17,715	21,113
June	13,852	9,904	17,345	17,774
July	16,668	10,067	13,783	24,439
August	14,008	10,982	13,894	20,455
September	14,521	13,382	19,763	21,090
October	14,582	13,264	25,006	21,956
November	13,493	15,350	21,025	20,917
December	12 932	15,006	21,792	19,294
	174,975	122,751	217,420	237,897

The quantity of paper imported continued to increase, any additional demand being filled by foreign supplies, while the home mills in most cases had to reduce their output. In the group of printing and writing papers the imported tonnage rose from 192,209 tons in 1923 to 202,997 tons in 1924. Packing and wrapping papers (including tissues) rose from 191,633 tons in 1923 to 211,337 tons in 1924, an increase of 10 per cent. Of this quantity no less than 81,048 tons came from Sweden, as against 62,459 tons in the previous year. The position of the wrapping branch of the industry has been the subject of careful consideration during the year, and as soon as the Board of Trade issued its scheme for the Safeguarding of Industries, preparations were begun for the presentation of an application on its behalf.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

Attention may be turned now to the various types of machines employed in offset lithography.

Rotary Rubber Offset Machines.

This type of rotary machine is fast supplanting both the direct and offset flat-bed types of lithographic printing machinery. It is also displacing in large measure the direct rotary litho, on account of the special facilities and prolific working endowments which this mechanism possesses. This class of machine depends absolutely on a metallic printing surface, and for this purpose zinc is admirably adapted. As with the flat-bed offset machine, so with these rotaries: the ink impression is first picked up by the rubber blanket from the printing plate, and then transferred to the sheet of printing paper, a procedure that enables considerably less water and ink to be used than by the direct printing methods, and at the same time yields a more even and solid impression. Large editions of fine work—such as machine ruling, half-tone, metzograph screen grain work, and the highest forms of chromo-lithography and colour commercial work, etc.—can be printed upon rough paper with excellent results. For such work on this machine, the methods already described of transferring and preparing the machine plate, in conjunction with the non-corrosive etching process, are the methods par excellence, the general treatment remaining analogous throughout. This printing of screen half-tone work upon plain unglazed papers opens out an enormous field of work for the lithographer, which cannot be approached by typographic methods. All this is accomplished on this type of machine at a greatly enhanced speed and with automatic uniformity of running. With the improved aid of mechanical self-feeders, more accurate and increased production is attained and a large part of the troubles necessarily involved and inherent in the human element are eliminated, as the mechanical appliance can maintain its energy of service over long periods as well as short ones, and there are no vexatious bad time-keeping or holiday troubles, whilst in addition these mechanical feeders save the wages bill entirely after they have earned their prime cost.

Once the single-colour offset rotary securely established itself and proved its high utility, it opened up the road for the development of the

Two-colour Rotary Offset,

or perfector offset machine, in which two colours can be printed upon the face of the sheet at the same time, or one colour on the front and one colour upon the back at the same time. This evolution ensures perfect register and more expeditious printing, with all the concomitant advantages attendant upon this acquisition. Naturally, this move onward gave a great impetus to lithographic printing, as it realised the precept of the old adage about "making two blades of grass grow where only one grew before." It did more: it marked out the lines of the next development, that of applying the offset principle to an entirely new field of lithographic work, that of reel-fed newspaper, periodical and illustrated magazine production. Thus the two-colour sheet-fed offset became a starting ground for a

Two-colour Reel-fed Offset Machine,

which enabled production to be nearly doubled again, and at the same time provided the market with an improved form of illustration so far as periodical and magazine work was concerned. For the first time these publications were produced solely by the offset process, which included high-light half-tone illustrations, irregular grain and metzograph screen work. In addition, the usual forms of lithographic drawings, such as chalk work, airbrush, spray or splash work, and shading medium of the irregular pattern were all called into service, thereby introducing a much wider range of variety in the manner and form of pictorial illustrative work than had hitherto been attempted on this class of printed matter.

From this position, again, offset has made another remarkable step forward, the latest acquisition being the

Four-colour Reel-fed Offset Machine,

which is producing bi-weekly German publications of quite a wide range of character. In Berlin we have seen these machines producing in multi-colour 36-page publications with four-colour illustrations from both process images and hand-drawn litho artist images. Humorist periodicals as well as political and social-economic weeklies are produced in large editions. In a subsequent article we hope to give a full and detailed description of these machines and their present-day accomplishments. In passing, we must not forget to mention that the reel-fed offset machine has also well-established itself in England, some very creditable productions being now turned out. It is safe to predict that it will not be long before the four-colour machine also will establish itself in this country.

It will be appropriate here to indicate further the ever-increasing popularity of the offset method of printing, by briefly referring to the experimental letterpress platen machine, which has been made to print typographically by the offset process. At this stage it will be as well to wait for more experience before striking a comparison of litho versus typo offset printing methods and machinery, as litho has had a good start and is already a long way ahead.

Photo-Metalithographic Processes for Offset.

This is a most interesting and valuable branch of offset metalithography, and is one that is being constantly developed, as it permits of the finest line and other work being copied by the camera and then being reproduced direct on to a zinc machine plate in any desired size. It includes direct photo-metalithography in line, grain, screen tone, tri-colour, and multi-colour, etc., as well as a combination of kindred methods. Editions can be at once printed, or re-transfers taken, without the aid of draughtsmen, etc, for the purposes of multiple printing on a large scale. Photo process work also covers photo multiple transferring; in this the old orthodox hand-work, in transfer pulling, patching-up, and running down for offset printing purposes, is now more efficiently and expeditiously accomplished, in quite a large range of work, by "step-and-repeat" duplicating methods, wherein the primal aid of the camera is brought fully into play in displacing the former methods of procedure.

In certain lithographic factories where the class of work lends itself more readily to this form of transferring, the litho hand and transfer press has made way for the pneumatic printing-down frame and the step-and-repeat camera. The offset printer, however, who commences to utilise photo-mechanical methods invariably starts with the more simple aspects of photography, such as the reproduction of line work by direct photo lithography. From this it is easier to extend to half-tone, and so on.

HAVE YOUR NEW MIEHLE EQUIPPED WITH THE

L&M PILE SUCTION FEEDER WITH SHEET-TURNING ARRANGEMENT FOR PERFECTING

AND THE MIEHLE COMBINATION EXTENDED DELIVERY

One of the important features of this Feeder is an arrangement whereby it is unnecessary to disturb the pile of sheets when printing the reverse side. To feed the sheets and turn them over, the pile is put into the feeder with the leading edge near the outer feed roller. The suckers then put the sheets on to the feed roller, which in turn carries them around the turning drum and between the carrying tapes, coming down on to the feed board again in the ordinary way. The pile feed board and pile delivery board are interchangeable with each other.

Trade Lithographers' Lunch.

Interests of the Trade Discussed.

Upwards of a score of members of the Trade Lithographers' Section of the London Master Printers' Association met for lunch at the Holborn Restaurant on Thursday, when the chairman of the Section, Mr. L. Wiles, occupied the chair. The toast list called forth speeches touching upon various matters of trade interest, and there followed the annual meeting of the Trade Lithographers' Section.

L.M.P.A. Solidarity.

The first toast after lunch, that of "The Prosperity of the Trade Lithographers' Section," was proposed by Mr. W. Whyte, secretary of the L.M.P.A., who, after a humorous introduction, proceeded to refer to the recent strike, the result of which, he thought, would tend to reduce the likelihood of similar crises occurring in the future. L.M.P.A. members, he said, had held together remarkably firmly throughout the dispute, and he thought sufficient reference had not been made to the very fine and loyal support received from the periodical printers. Turning from the subject of labour troubles to difficulties in connection with prices, Mr. Whyte referred to the lithographers' jobbing price list, and recommended that any revision necessary should be made therein and the list reissued and observed. He thought its observance was only fair to the customer as well as to the lithographer, for uncertainty of price was irritating to both, whilst without fair prices they could not pay good wages, employ good workers and do good work. He hoped they would very soon have and observe a fair price list, for that was a matter very closely bound up with the prosperity of their trade. (Applause.)

Response was made by Mr. F. W. White, who, on behalf of the Section, thanked Mr. Whyte very cordially for finding time to be present with them. Reviewing the history of the Section, Mr. White said that since its formation five years ago a good deal had been done that was beneficial to the trade lithographer. The very fact that they had a Section of their own had served to focus the attention of the L.M.P.A. officials upon the difficulties and needs of the lithographic trade, whilst they had a representative on the Council of the Federation and a representative also on the Labour Committee. They needed, however, more enthusiasm on the part of their membership. Mr. White concluded by stressing the necessity for maintaining fair and reasonable prices, and appealing to members to co-operate in that direction.

Mr. V. G. Read proposed the toast of "The Visitors," and took the opportunity of recommending the Association to any non-members present. He cited as an example of loyalty between members of the Section a case that had come to his personal knowledge, in which one member refused to undercut a price obtained by another member.

Response was made by Mr. J. Griffiths (of the Cornwall Press, past president of the South-East L.M.P.A.), who intimated that, although himself a member of the Periodical Group, he was much interested in and closely connected with the lithographic side of the industry. He congratulated them upon having a Lithographic Trade Section of the L.M.P.A., and went on to bear personal testimony to the effectiveness of the collective advertising now being carried out by the Section. After speaking of the recent strike negotiations (in which he took part), Mr. Griffiths concluded by a reference to the subject of price-cutting, urging members to be on their guard against the unscrupulous customer who played one printer off against another in the endeavour to obtain cut prices.

Progress Being Made.

In a speech from the chair, Mr. Wiles said he was sure he was expressing the feelings of them all in saying they were sorry to hear that Mr. Johnson (L.M.P.A. organiser), who was the original founder of their Section, was prevented by indisposition from being present with them. They wished him a speedy recovery. (Hear, hear.) Proceeding, Mr. Wiles said he had no reason to change the opinion he had expressed a year previously, viz., that the position of their trade was improving and would, given satisfactory conditions, continue to improve. One of the requisite conditions for progress was advertising. Mr. Griffiths had given them an example of the effectiveness of their collective advertising campaign, and he believed several members had received inquiries and orders through the scheme, which, however, he thought was not sufficiently appreciated. Special advertising was being arranged in connection with the coming Printing Exhibition. Reviewing the year's work, Mr. Wiles said he felt the year had brought much more encouragement than they had had previously, and it was becoming known that there was benefit to be derived from the Section. Their committee in the main had been very regular in attendance, and, though he could not report any additions to membership, their membership included 60 out of about 66 firms in the City of London. They wished, however, to get the interest of their full membership, for this would enable them to benefit the trade to a greater degree than was at present possible—by arranging lectures of special interest to trade lithographers, and by making fuller use of their Section for discussing and advising in respect of the various little troubles that cropped up from time to time. He appealed to members to take a wider view of their membership than the mere consideration of what return would come to themselves, and to seek to consider the interests of the trade as a whole, and so bring about that harmony which would make life brighter and better worth living. (Applause.)

Election of Officers and Committee.

At this point the business of the annual meeting of the Section was entered upon, Mr. E. G. Baker (L.M.P.A. assistant secretary) reading the minutes of the last annual meeting, which were approved and signed.

The next item being the election of officers and committee, Mr. Wiles vacated the chair, which was temporarily occupied by Mr. Love.

Mr. Love proceeded to bear testimony to the excellent way in which their chairman had carried out his duties during the past year. Mr. Wiles' courtesy, ability and care in the interests of the Association had, he said, helped forward their cause in no small degree. He had the utmost pleasure and confidence in asking them to re-elect Mr. Wiles as chairman.

Mr. Wallace, who also spoke in high praise of Mr. Wiles' services, seconded the proposition, which was carried unanimously.

Mr. Wiles thereupon returned to the chair, expressing thanks for the confidence shown in him.

As representative of the Section on the L.M.P.A. Council, Mr. F. W. White was unanimously elected.

All the committee for the past year, with one exception, were eligible for re-election and were re-elected *en bloc*, viz, Messrs. E. A. Cackett, J. Foot, F. W. Harcourt, A. F. Love, V. G. Read, H. Wallace, W. H. Wass and F. W. White. Mr. W. A. Witterick was also elected to serve on the Committee.

The late Mr. Benjamin H. Blackwell (75), of Gross, Oxford, bookseller and publisher, left £54,243.

The Moisture is extracted by a suction pump.
Automatic Temperature Control and Time Switch.

¶ Produces, in conjunction with Light's "Photo Tone" Fine Art Flong, Half Tone Matrices of finest screen so accurate that Stereos cast therefrom are facsimile to originals.

¶ Perfectly even pressure throughout the surface of the platen is absolutely guaranteed, in contradistinction to all stereo presses operated pneumatically, hydraulically, or by hand power, which have centrally actuated platens inevitably more or less deficient in equality of pressure.

¶ Saves Type, Time, Labour, Power and Fuel.

The "WINKLER" Automatic Ingot Caster

will substantially cut down your loss in dross and your bill for renovating metal.

The Metal is Drawn from Bottom of Pot, which is directly connected with the ingot moulds. Consequently only the clean metal is cast under the weight of the metal in the pot.

The Surface of the Metal is Kept in a Non-Oxidizing Atmosphere, which prevents the formation of dross.

No Unhealthy Fumes from the Metal, these being carried off through the flue.

Automatic Metal Mixing. When the metal flows into the moulds the air escapes through the metal in the pot, thereby acting as a natural stirrer.

"Surface Combustion" Gas Burners, giving uniform furnace temperature and minimum gas consumption. Radiant heating from refractory bed on which correct mixture of air and gas burns completely.

Lithographic Trade Review.

NOTES AND NEWS.

The improvement recently reported in the lithographic section of the industry appears to be well maintained, whilst the figures relating to unemployment continue to indicate a satisfactory decline. As far as general business amongst lithographic printers in London goes, reports show that a better condition of things prevails at the present time than was the case a month ago, whilst compared with a year ago a very appreciable improvement has taken place.

Little has been heard for some time of the dry litho process discovered by Mr. W. P. Price, *i.e*, the special ink rendering possible the execution of genuine lithographic printing without the use of any damping apparatus. This does not mean, however, that the process has died a natural death; we gather that it is, on the contrary, very much alive and that more will be heard of it in the near future.

"Offset and the Process Engraver" provided an interesting subject for the March meeting of the Process Engravers' Club. Mr Willie, of Messrs. Hunter, Ltd., was the principal speaker, and had some practical suggestions to make in regard to co-operation between the offset printer and the process engraver. The Engravers' had the help for this meeting of four members of the Printers' Managers and Overseers' Association, experts in offset, namely Messrs. W. C. Davenport, A. Leggatt, A. D. Cartwright and A. Shepherd, who took part in the discussion.

The Federation of Master Process Engravers will have an exhibit at the Printing Exhibition, where the work of individual process firms will be displayed and a rendezvous provided for all who are interested in the production of illustrations of any kind.

The progress being made in the application of photogravure to colour printing is a matter which lithographers may well note with interest—though not necessarily with anxiety. The London *Graphic* startled the trade recently by coming out with a fine two-page picture in three colours, the result being strikingly successful and reflecting great credit on the Sun Engraving Co., Ltd., whose excellent photogravure department was responsible for the printing. Readers interested ean obtain a copy for themselves by dropping a line to the company at Milford-lane, Strand, W.C.2.

Mr. A. J. Dowden, assistant to Mr. Woodgate Stevens, of the London branch of the Amalgamated Society of Lithographers, is making excellent progress from his recent serious operation, and expects to be out of hospital very shortly.

Paper merchants are stirring themselves in the matter of papers for offset book and publicity literature printing. It is beginning to be realised that the future course of advertising will bring about an increased use of certain types of paper. Hitherto offset has been too closely associated with bond papers, with the result that the paper market is now inundated with a multitudinous variety of bond papers. It is very satisfactory to observe the almost total disappearance of American bond papers on the English market. There are two reasons for this: first, the high price of the imported product, and, second, the capability of English papermakers to produce equal and better papers, with similar characteristics, at lower prices. Recent sample sets of tint ranges from English mills furnish abundant proof of the progress made in bond paper manufacture in recent years. A very sensible development is the gradual elimination of the American sizes, which at one time threatened to stake a claim on the English market. Canadian makers adopt their neighbour's customs, and although they are sending some excellent cheap tinted bonds, they are making a mistake with their sizes.

The other types of paper referred to as within the province of offset include cartridge, matt and antique printings, cover papers and paper specially adapted for illustration and colour. This is where offset will eventually find its biggest field, and there is no reason why the whole of it should not be fed by British paper. In fact, British paper is characteristically fitted for offset printing, and Continental paper is not. Yet there are English paper merchants whose first thought is toward foreign mills.

As regards "art" or coated papers, by the way, the facts of the situation to-day seem to be as follows:—There is, and will continue to be, a growing demand and a widening field of use for coated printing paper. Fears that the offset process, with its ability to reproduce half-tone work on any sort of paper, would supersede letterpress half-tone printing are dispelled by the rapidly increasing use of art paper for publicity literature and advertisement. Modern publicity consists essentially of picture, photograph and text. The offset press is making a new field for itself and is chiefly concerned in exploiting art and atmosphere. Sheer fidelity, forcefulness and commercial value are still embodied and so far as we can see ahead always will be in coated paper and half-tone monochrome and colour plates. The rapidly extending interest and education in the right use of paper and print are responsible for a growing desire for newer standards. In art paper the movement seems to be in the direction of a semi-matt surface, dead but smooth. Such papers are on the market, but the price is high compared with ordinary paper. What is wanted is a paper free from any suspicion of gloss, easy to print and quick to dry, obtainable at prices equal to the present cost of smooth art paper.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

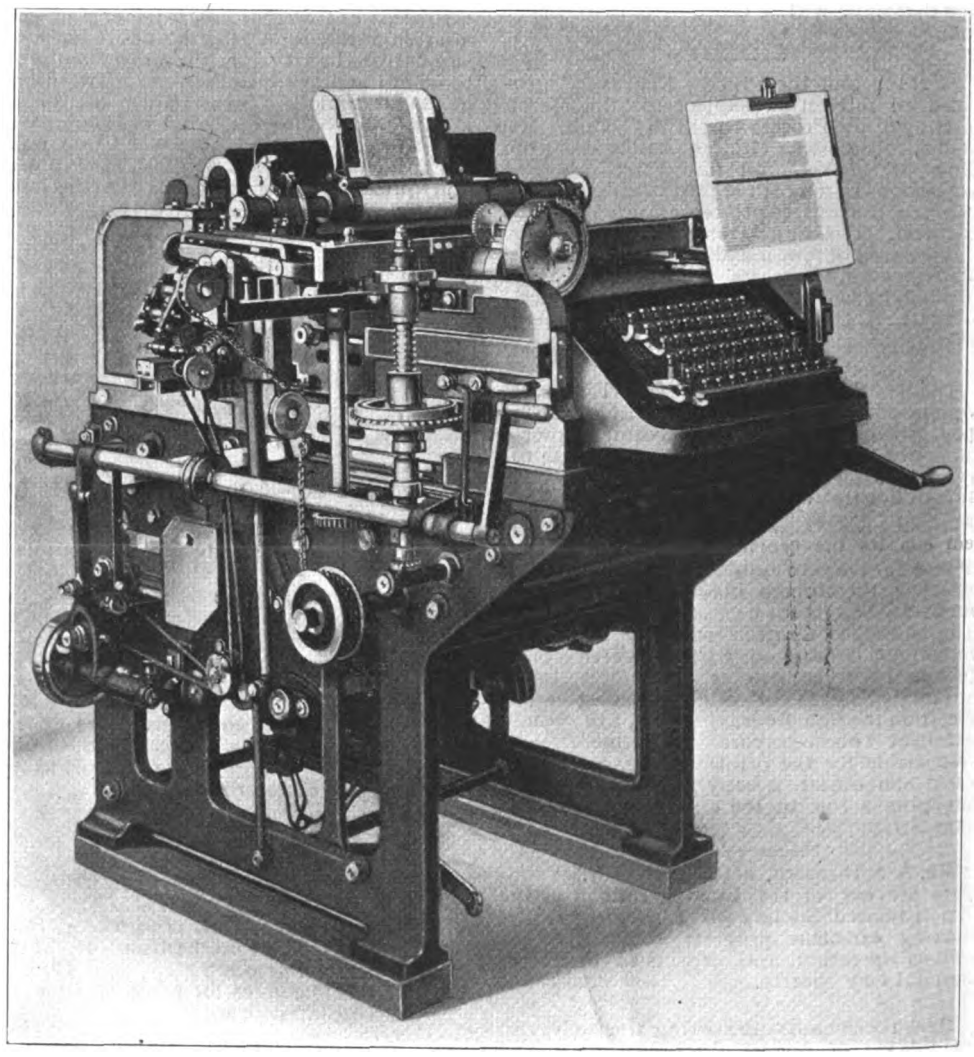
A Text-Typing Machine for Lithographers.

Type-Setting and Machine Composition Eliminated by a Wonderful Mechanical Invention.

Revolutionary Possibilities in Printing Methods.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.



In the World's Printing Trade Congress at the Printing Exhibition held in May, 1921, I ventured to predict that some form of photo-composing machines might eventually dispense with either hand or mechanical type-setting, and in a lecture at Stationers' Hall in November, 1922, I elaborated this theme, giving a period of five years for the development of the idea—that is to say, for producing some workable machine which could be put into practical use. Nearly four years of that period have passed and in that time a number of inventors have been actively at work endeavouring to give practical effect to that idea. A good deal has been accomplished, and numerous patents have been taken out with the objective, in some form or other, of solving the problem of superseding type-setting, or at least supplementing it by some more direct way of producing text copy for the lithographer or photogravure printer. At least four machines have reached the stage of completion, if not of perfection, and I know there are others in progress the details of which have not been made public.

Two Ways of Attacking the Problem.

Inventors in this field have been working on two distinct lines of thought. One section have essayed to carry out the idea purely of photo-composing. This means photographing letter by letter or line by line as the text is composed. Of this nature is the apparatus of Mr. Arthur Dutton, Mr. A. E. Bawtree, and Messrs. August and Hunter. The other section have conceived that the more practical way is to proceed on the principle of the typewriting machine, producing a sheet of copy in clean-cut printing characters so that it can be reproduced as a whole either in the camera, or by one of the methods of photo-printing through the sheet, or by a reflex method, such as the Manul process. Though the idea of photographing letter by letter or line by line is a fascinating one, and may be perfected sooner or later, the typewriter method seems to present the prospect of the earliest solution, and indeed the purpose of this article is to show that it has already been accomplished. The Rev. T. Walton, about two years ago, showed a typing machine of this nature which seemed to have very practical features, and which was a marvel of ingenuity, but he thought it best to demonstrate first that it would produce copy for music printing, believing that as this was the more difficult problem the typing of text matter would be an easy transition. No doubt that would be so, for it only meant replacing the music characters with alphabets, but in my opinion this policy was a mistake, and led to the withdrawal of the machine from public exhibition before the text-typing idea had been carried out. The fact that the music-printing trade showed comparatively little interest in the machine probably discouraged the manufacturer from proceeding further. Mr. Walton has since planned a new machine on improved lines specially for text-typing, but so far, I believe, has not been able to make arrangements for its manufacture.

The "Typary" Machine.

Meanwhile, an important Swiss printing firm, the Polygraphic Co., of Laupen, near Berne, have been steadily working on a typing machine, which is entirely based on mechanical principles, ignoring any optical complications such as arise in photo-composing. This firm set out with a very practical conception of the idea they sought to realise. Being engaged in offset printing on a large scale—being in fact, the largest producers of offset work in Switzerland, and regularly employing ten rotary offset machines—they found the difficulty which handicapped them in printing text matter was the necessity of having to utilise letterpress operations for producing the original to be put down on the offset plate. This meant that all the routine of letterpress work had to be gone through—composition, correction, making up into formes, and putting them on to the machine—to obtain the one good copy necessary for the photo-reproduction. This firm were the first to adopt the Manul process and work it successfully on a large scale, but they found out its limitations, chief amongst which was that it could reproduce only existing printed matter, and that only in its original size and with its inherent imperfections. It was a natural thought to aim at producing new text by means of some machine as facile as the typewriter. No doubt they considered all the possibilities of photo-composing, and were acquainted with the various suggestions made even so far back as the middle of the last century. The first patent directly bearing on the present day schemes of photo-composing is one by Professor Eugen Pozzelt, of Budapest, who devised a photo-electrical apparatus by which types were photographed as single letters by means of a rotating drum. He took out an English patent No. 14,525 of 1890. The English patent of Friese-Greene (7,099 of 1895) revealed another way of proceeding, though it never came to practical fruition. These and more recent patents convinced the directors of the Polygraphic Co. that no solution had yet been found for the problem by purely photographic methods and they therefore proceeded on the line of constructing a new kind of typewriting machine which would produce type print.

The "Typary" Text-Typing Machine.

The Basic Principle.

The principle adopted by the Polygraphic Co. is one set forth in an English patent, No. 156,618, by Werner Schäffer, of Berlin, the application date for which was January 6th, 1921. The invention is described as "An improved typewriter of the type-bar class." The object was to print by lines instead of by letters, but there is nothing to indicate in the specification that the inventor had the idea of using the machine for anything more than ordinary typewriting purposes; no suggestion is made of using it in conjunction with photo-offset. A further patent No. 182,908 by the same inventor, with the application date of April 11th, 1921, elaborates the idea, and mentions the object of justifying the lines by variable spacing, but still without any reference to the purpose for which the machine is to be used. After that the invention is apparently taken up by the Polygraphic Co., who apply for a patent of addition to the foregoing patents their application date being November 21st, 1921, but not yet revealing that the invention is anything more than an improved typewriter. Then follow a series of eight patents in which the idea is clearly revealed of utilising the invention, with the various improvements on it, in connection with the preparation of printing surfaces.

Essential Features of the Machine.

Though characterised as a typewriter, there are certain analogies connecting the invention with the typecasting and composing machine and the printing press. Perhaps the nearest relation to it is the Multigraph, which, however, prints whole sheets, whilst the "Typary" prints line by line. The Multigraph uses single letters which have to be set up and pushed into grooves, but the "Typary" uses type bars on which there are 12 spaces or characters. In appearance the type bar is somewhat like a thin linotype slug, but only about ⅛ in. high. The characters are arranged vertically in relation to the length of the slug, which is about 3⅛ in., that is to say, they are at right angles to the usual direction in which

Digitized by Google

type is set. There is a rounded groove between the characters, the purpose of which is to bring about alignment. Each end of the slug is brought to a V edge, and the whole length of the slug on one side is grooved, this having the object of guiding the bar in its forward and backward course. The bar is of hard type metal, and a dozen or so of these bars are loosely placed in grooves in a holder, which has a similar function to a matrix case. The holder, or as many similar holders as may be required to charge the machine, is inserted in its proper place in the machine, and the face of type used may be changed by inserting holders containing a different set of type bars. The justifying space bar has flexible springs on one side of it, so that when the line comes slightly over length the line can be squeezed up. Two models of the machine are constructed, one being termed the One-Style machine, with 120 type characters, and the other the Combination-Style machine with 225 characters. The combination or arrangement of the type characters is such that a sufficient number of letters are provided for setting one line. There is no possibility of running short of letters, even if a whole page had to be set with one letter, say the letter "x," of which there is ordinarily very few in a fount of type. It should be noted that each holder contains a complete alphabet of lower case and capitals with all the requisite figures, signs, spaces and punctuation marks, and every holder is interchangeable, thus permitting the setting of any desired style of type for which type bars are available. The machine, therefore, possesses all the advantages which the Linotype, Monotype and similar machines achieve by change of matrices. Another essential feature is a justification and re-assembling control device, which automatically sets and locks one line at a time up to the length of 32 pica ems, regulates the spacing between the words, and admits of corrections, or the insertion of hand-set display type, or blocks.

The Keyboard Equipment.

A universal keyboard similar to that of a standard typewriter is furnished with 60 keys, allowing of 120 characters with the shift device. By means of mechanical support of the escapement the touch is rendered extremely light, as in the case of the best typewriting machines. A throw-out or correction arrangement enables the typist to correct errors of typing by simply striking the proper key, an operation impossible to perform on composing machines with dropping type or matrices, or on machines operated by a perforating device. A line-spacing device permits of any desired spacing between the lines. An indicator showing the length of line set in typographic points operates with high speed.

Inking and Impression Mechanism.

This works automatically and independently of the type-assembling mechanism, printing one line at a time, and permitting the operator at the keyboard to continue typing line after line, without having to wait for the impression. The type bars are, of course, inked with printers' ink by means of a roller, not by any ribbon or pad.

Operations by Motor.

An electric motor of ½ h.p. is directly coupled to the machine, its object being to run the inking and impression mechanism, and to carry the type bars back. The return of the type back to the holders takes eight seconds, after which the motor automatically switches off until wanted for the next line. In the event of anything going wrong, or any mistake being made in the typing, the machine can be stopped instantly at any moment by tapping the emergency key. Having tapped the wrong key the typist can correct the mistake by means of the type release key. For the spaces between the words there is a space key, and for tabulating and open space work special spacing keys are provided. The releasing of the type does not result immediately from striking the keys, but indirectly by putting in operation some interior mechanism actuating a recording device, which in turn works the printing mechanism to form the line, inking and printing it, and returning the bars to the holders. Whilst the impression is being made, the next line is put into position by the recording device through striking the keys, so that the keyboard manipulation is never interrupted. This conduces to high speed of operation. Whilst the average speed is 10,000 strokes per hour, the machine would accomplish as a maximum of 25,000 strokes if an operator could type at that speed.

Size and Weight of the Machine.

The bulk of the machine may be judged by the fact that it weighs approximately 1,800 lbs. Its width is about 30 ins., length 40 ins. and height 44 ins. The solidity and practical character of the machine can be judged by the accompanying illustration.

Routine of Operations.

As a preliminary, the operator selects the desired size or style of fount and inserts the type holders or magazines in the machine. The motor is connected up, and the inking apparatus regulated. The margin lock and line spacing device is set. A line is typed out, locking when the bell rings; motor started by the switch key, waiting two seconds, when the type assembler is ready for the next line. The next line is typed out, whilst in the meantime the machine is making the impression of the previous line, carrying back the type bars to the holders (requiring eight seconds), and switching off the motor. The cleaning of the type once a week takes about fifteen minutes.

Correcting.

Most previous inventions of this kind have failed in not making provision for correction, but in the machine here described every contingency of this kind has been thought of. A kind of lay-out board is provided on which fresh lines on separate strips of paper may be inserted, or display type and illustrations fitted in. It is no more difficult, nor does it take more time than is occupied by the litho. transferrer in "needling up" work which has to be patched. To aid in placing the lines, every type bar prints a dagger at the ends of the lines automatically on the right and left margins. Title lines, paging, etc., are written on a separate sheet, cut up and stuck in their proper places. Lines above 12 point size have to be set up, pulled and inserted by hand, but it is likely that in course of time machines for larger type will be constructed. A supply of ornaments and borders, etc., are kept in the form of clean copies, and pasted in where required.

Laying Down the Work on Zinc.

A perfectly typed and laid-out page having been obtained, the next step is to put it down on the zinc plate for the offset or direct litho press. This is done by means of the Polygraphic Company's "Typon" process. This is an even simpler method than the Manul process for obtaining a reproduction of printed matter without using the camera. As this interesting method deserves a full explanation, and this article has already exceeded permissible limits, it will be best to reserve for another article a description of this and other processes which have been worked out by the Polygraphic Company as accessory to the Typary machine.

Exhibition of the Machine in London.

A small battery of three machines has been in use for some months in the Polygraphic Company's works in Laupen, and it is intended to bring over a machine to London early in May in time for the forthcoming Printing Exhibition. Offices have also been opened in London for demonstrating the machine and the auxiliary processes. The machine will undoubtedly cause a great amount of interest, if not sensation, in the printing trade, and is sure to provoke a lively discussion of its merits and possibilities. Such discussion should contribute to the further clearing of many questions opened up by this wonderful invention, which personally I regard as of the highest importance, and likely to have a profound bearing on the future of the craft.

Trade Union Matters.

The Executive of the National Society of Operative Printers and Assistants give notice that a ballot will be taken, commencing from Saturday, April 11th, and ending on the Saturday, April 25th, upon the proposal for an alteration of the rules of the Printing and Kindred Trades Federation, making it necessary for any affiliated union having agreements with an employers' association on wages, grading of districts and towns, hours and holidays, etc., on being approached by any employers' organisation, or themselves desiring to change any such existing agreement, to notify the Executive Committee of the P. and K. T. F. of any such contemplated change. The Natsopa Executive advises members to support the resolution, "as it will be seen that it is an attempt to ensure that the Federation and its affiliated societies shall be informed of actions taken by any of the societies with a view of avoiding complications such as have arisen in the past."

Eight-Hour Rest Rule.—The secretary of the Manchester branch of the Typographical Association has reported that a local printing firm desired an agreement suspending the operation of the rule relating to the rest of eight hours after working overtime in connection with the printing of a list. The time of arrival of copy was so uncertain that members were often waiting for copy and being paid at overtime rates. During the Christmas season members were called in to work all day and night up to 7 a.m., and were then told to recommence at 4 p.m. in order to comply with the required rest of eight hours. Seven hours' ordinary time pay was thus deducted. The Executive Council, after consideration of the question, have informed the secretary that they could not agree to any variation of the rule.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines **6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

THURSDAY, APRIL 9, 1925.

Mr. Gamble's Prophecy.

IN the striking article which Mr. William Gamble contributes to this issue he recalls his now famous "five years' prophecy," in which he confidently predicted the coming of a really practical apparatus that would permit of the printing of typographic matter without the need for the setting up of metal type. Very shortly after its appearance in our columns this prophecy circulated throughout the printing world, being quoted in the United States and other overseas countries and arousing universal interest. It had a mixed reception, there being amongst those who heard it some who regarded it as impossible of fulfilment and others who interpreted it as indicating an alarming menace to the important section of the printing industry engaged in the practice of, or the providing for, the setting of type by hand or by machine. Developments that have already taken place indicate, as Mr. Gamble's article shows, that he is on pretty firm ground in respect of his forecast. This does not mean, however, that typographic printing is on the eve of extinction. Any serious diminution in its use is, we think, as yet in the distance, and we still have doubts as to whether the rich, clear-cut beauty of type impression as seen in the best book printing will ever be quite equalled by photographic reproductive methods. The new movements, nevertheless, are of immense interest, particularly to lithographers, and should command serious attention throughout the industry.

* * *

Imperial Preference.

BRITISH trade is in danger of losing advantages in the colonies which it has previously enjoyed. There is now a recommendation to abolish preference in South Africa. The existing Customs rebate on British and foreign goods, under the new proposal, is to be replaced by a so-called two line tariff, with a most favoured nation clause, operating on a strictly *quid pro quo* basis. Indifference on the part of the British Government and the British public is held in some quarters to be largely responsible for the changed attitude in South Africa. With some show of interest at home it is thought the South African producers will wake up to the fact that it is contrary to their interests to abolish preference. Thus South Africa appears to be following the example of Australia, and all for the lack of encouragement at the heart of the Empire.

* * *

A Blow to the British Paper Trade.

THE abolition of preference on British goods as outlined above is of vital concern to the British paper industry, and affects both employers and employed. It is well known that our colonies as markets for British paper have been of the greatest assistance during a long period of depression, and just at a time when a revival in business is so badly needed we are threatened with a new trade orientation of a most disturbing nature. Already it is stated that South Africa has arranged a commercial treaty on the lines of mutual concession with Holland, that another is being negotiated with Germany, and the policy may possibly be extended to other countries, thus placing Great Britain in a position of great disadvantage.

Lloyd Memorial (Caxton) Seaside HOME.

"Daily Telegraph" Composing Chapel Night.

The B.S.C. Fund held a concert in aid of the funds of this Home on Saturday last, when, as is usually the case where this popular institution is concerned, there was a large attendance at the Oval Tavern, Kennington.

The chair was taken by Colonel E. F. Lawson, D.S.O., M.C., who was supported by Mrs. E. F. Lawson, the Right Hon. G. W. Bowerman, M.P., Mr. F. J. Caine, Messrs. D. Salter (Lino father), W. Pearse (case father), F. W. Swaby (time hands father), F. R. Gummon (chapel clerk), and J. T. Portas (imperial father).

The artistes were specially worthy of notice, two being particularly good, both in their single turns and duets. These comedians were programmed as Dan Stanley and Billy Warren. Dr. Loura, the Italian Minstrel, was quite good, and merited his encores. Miss Annie M. Preston, a pleasing mezzo-soprano, as always, obtained encores. Mr. Derek Carfax met with an ovation at the conclusion of his item "Macushla," whilst Mr. J. Cope's fine pianoforte selections brought much applause. Mr. Fred Hylton, Mr. S. R. Whiffen, Master James Vale, Mr. William Pittham, Miss Maud Hill, Miss Catherine Harclare, Miss Evelyn Fraser, and Miss Minter also contributed to the programme. Mr. Chas. H. Hardy was the accompanist, and Mr. T. Wheeler acting musical director.

The plate resulted in about £50.

A vote of thanks to Colonel E. F. Lawson for presiding, coupled with a vote of thanks to Mrs. E. F. Lawson, brought a very successful and pleasant evening to a conclusion.

In connection with the Lloyd Memorial Home, a novelty at the Printers' Exhibition is announced in a circular being circulated to the trade. It states that there is no home like the Deal Home, with its bright cosy rooms, near the seashore, and facing the North Sea, whose life-giving air has made this quaint old seaport so famous, and that this is the reason why the self-contained flats for retired London men from the printing, stationery and allied trades are to be built at Deal. To assist in raising funds for this scheme a great variety of things have been got together, including watches, clocks, cabinets of cutlery and other valuable articles, some of which are expressly given by well-known gentlemen and firms, for the shilling dip in "Pot Luck." The shilling is a payment for the article received, which is not less in value than the sum charged, and may be twenty times its value. There is a prize for everyone, and there are no blanks. To assist this excellent object chapels and others are requested to purchase their admission tickets for the Printing Exhibition from Mr. H. F. Parker, 80, Blackfriars-road. The price is 3s. per dozen.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

The New President of the National Association of Wholesale Stationers and Paper Merchants.

Since he left the manufacturing side of the paper industry Mr. H. G. Bradly, C.B.E., has quickly come to the front again on the administrative side of the wholesale trade. Few men in the paper trade have had such an all-round experience as Mr. Bradly, since he has touched the industry on every facet. As our

Photo, Elliott & Fry, London.

MR. H. G. BRADLY.

readers are aware, he is now throwing himself heart and soul into the efforts which are being made to bring the wholesale stationers into a compact organisation, and at the annual meeting of the National Association, which was held recently, he was elected president.

Mr.Bradly was 25 years with Messrs. Lepard and Smiths, Ltd., to whom he has returned last year, after adding to his unique experience in other fields. As technical adviser to the Paper Commission and the Paper Controller, he had exceptional opportunities of gaining an insight into the working of the industry. This office he held for several years during and subsequent to the War.

A little while after giving up his official duties, Mr. Bradly became associated with Messrs. Charles Marsden and Sons, Ltd., and the Northfleet Paper Mills, Ltd., and as a director of these concerns he had a very close insight into the manufacturing end of the business. At the close of 1922 he severed his connection with these companies, and after a little rest he joined Mr. H. H. Hardy (Burnell, Hardy and Co.), and the style of the firm was altered to that of Burnell, Hardy and Bradly. Last year Mr. Bradly made still another change, when he returned to his old love, Messrs. Lepard and Smiths, Ltd., of which he is a director.

We learn, says *Papyrus*, that Sig. Guiseppe Isidoro Arneudo has completed his (Italian) "Technical, Exegetic, Historical Dictionary for the Graphic Arts."

A new technical journal has just made its appearance in Italy, under the title of the *Art of Printing* (*L'Arte della Stampa*). This title recalls the famous review of Salvatore Landi, published in Florence for many years. It is a new weekly publication for workers in the graphic arts. The offices are in Via Michele Rosa No. 27, Rimini, Italy.

Personal.

Mr. E. S. Agnew, the assistant managing director of Messrs. Bradbury, Agnew and Co., Ltd., the proprietors of *Punch*, has been appointed chairman of the Periodical Trade Press and Weekly Newspaper Proprietors' Association.

Lord Riddell is president of this Association, and Sir George Sutton and Sir Edward Iliffe vice-presidents.

Mr. James Walker, a past president of the Printing, Bookbinding and Kindred Trades Overseers' Association, and works manager of the Fisher Bookbinding Co., Ltd., has again been elected as a member of the Wood Green Urban District Council. During the last three years Mr. Walker has filled with credit to himself and satisfaction to the ratepayers the position of chairman of the Baths, Fire Brigade and Entertainments' Committee.

Mr. C. C. Botwright, of Sir Isaac Pitman and Sons (Ltd.), who has for 17 years acted as hon. secretary to the Bath and District Master Printers' Association, and recently relinquished the office on account of indifferent health, was on Wednesday of last week at the bi-monthly meeting of the Association at the Red House, the recipient of a handsome clock as a token of the members' appreciation of his long and valuable services.

Lieut.-Col. Egbert Lewis, J.P., one of the vice-presidents, who made the presentation, referred to the valuable work done by Mr. Botwright during the 17 years he had been secretary, and there were many other expressions of the esteem in which Mr. Botwright is held.

Mr. E. H. Tillett, general manager of the *Yorkshire Evening Argus* for the past two years, has been presented by the staff with a gold watch on leaving to take up an appointment on the *Yorkshire Evening Post*.

At Thursday's session of the University Students' Congress at Oxford Mr. Wickham Steed spoke on "Newspapers and the National Life."

Mr. Oliver T. Breakspear, the editor of the *Advertisers' Weekly*, has been entertained at luncheon by his colleagues and presented with a silver cigarette case, on resigning to take up a newspaper appointment in Hong Kong.

Mr. H. W. T. Garnett, principal of the firm of Messrs. P. Garnett and Sons, paper manufacturers, Otley, Yorkshire, has returned to this country after his Pacific tour.

A Handsome Specimen Book.—The specimen book of the types and printing materials issued by Messrs. H. W. Caslon and Co., Ltd., the old established typefounding firm of Chiswell-street, E.C., is a very handsome production forming a bulky quarto volume that contains examples of the many and various forms of type that are supplied by this firm. From cover to cover its pages have an interest for the printer who loves his art and who may find here faces to suit the most exacting job he may have. The celebrated romans and italics of the Caslon firm have never been surpassed for beauty of design and fineness of cut, and they are here shown with the very latest and up-to-date specimens of display type, borders, ornaments and other material, and it is interesting to note that some of the borders shown in the book were introduced by the first William Caslon, and are as suitable for display work to-day as when the designs were first cut. The book is most beautifully printed—as a typefounders' specimen book should be—on a light tinted paper that serves to throw the various examples into prominence, and it is a volume that should prove a welcome and useful addition to the printers technical library. We understand that there has been a great demand for it both in this country and America. Price lists accompany the specimen book, and are so arranged that the cost of any particular fount can be easily ascertained.

Trade Notes.

Messrs. Berry have acquired the three Glasgow papers controlled by Lord Rothermere—the *Daily Record and Mail*, the *Sunday Mail*, and the *Weekly Record*—and have also purchased the *Glasgow Evening News* from Lord Weir's brother. It will be remembered that a few weeks ago they bought the *Newcastle Chronicle* series of newspapers.

Messrs. Percy Brothers, Ltd., proprietors of the Hotspur Press, Manchester, have removed their London offices to 170, Fleet-street, E.C.4, where they will continue to be represented by Mr. Gomer Evans.

The Lord Chief Justice (Lord Hewart) and Justices Shearman and Salter, in the King's Bench Division on Monday, discharged, without costs, the *rule nisi* granted against the editor, publisher, and printer of *The People* for a writ of attachment for alleged contempt of Court in publishing an article relating to William Cooper Hobbs.

After an existence of over 25 years the announcement is made of the suspension, until further notice, of the *Hackney Spectator*. The paper was founded by Mr. Albert King, who was killed in France in 1916. The journal was carried on until 1920 by his widow, and then the property was sold to Mr. Henry Nevill.

The annual festival of the *Daily News* and *Star* Overseers' Guild was held on Saturday at the Holborn Restaurant. Mr. E Stewart occupied the chair. The visitors included three directors of the *Daily News*, Ltd, and their wives. Mr. Henry T. Cadbury, managing director, replying to the toast of "The *Daily News*, Ltd.," spoke of the progress being made in the much-needed extension of the existing premises.

Mr. Heber Mardon, founder and for many years head of the Bristol printing house of Mardon, Son, and Hall, now a branch of the Imperial Tobacco Co, has died, aged 85. He retired in 1904, and had since lived at Teignmouth, Devon. In early life Mr. Mardon took an active part in local affairs in Bristol, and gave generous support to benevolent institutions.

Mr. Percy Livingstone Parker, editor and proprietor of *Public Opinion*, died on Wednesday at St. Leonards. He edited the *London Magazine* in its early days, and started the "*Daily Mail* Year Book."

Mr. John Archibald Brown, editor and managing director of the *Isle of Man Times*, died on Thursday in his 86th year.

The death occurred last week, aged 49 years, of Mr. James Cochrane (for over 35 years on composing staff of the *Liverpool Daily Post*).

The death has occurred in Glasgow of Mr. Robert Livingstone (aged over 70) who was a pioneer in football journalism, and was one of the founders of *Scottish Sport*, a weekly journal.

Mrs. C. E. Humphry, one of the best-known women journalists of a generation ago, died on Thursday, aged 82. For thirty years she wrote as "Madge" in *Truth*.

Great regret is expressed in North Devon at the tragically sudden death from angina pectoris of Mr. Leonard William Wallis, stationer and newsagent, of Church corner, Butcher's row, Barnstaple.

The members of the Oyez Club Dramatic Society, formed of employees of the Solicitors' Law Stationery Society, Ltd., gave a first performance at the Guildhall School of Music on Tuesday, March 31st., when "Nothing but the Truth" was played before an audience of about 400. Although a play of this character makes a somewhat ambitious beginning for a new company, the acting was excellent throughout and the production was enthusiastically received by those present. It is hoped to arrange another performance in the near future, possibly on behalf of a printers' charity.

The South-East London Master Printers' Association will hold a progressive whist drive and dance at the Bridge House Hotel, London Bridge, on Wednesday, April 29th.

Going to press early in view of the holidays, we are unable to include this week a report of the exhibition of British printing at the London School of Printing, Stamford-street. It is sure to attract much attention, including as it does examples of the best type of coloured poster printing, artistic letterpress reproductions of Old Masters and modern pictures, calendars box covers, and magazine covers.

DIVIDENDS AND REPORTS.

SOLICITORS' LAW STATIONERY SOCIETY.—Report for 1924 shows sales amounting to £245,231, against £213,330 in 1923, and profit of £42,911, against £38,936. With £8,236 brought forward, available balance is £51,147. Directors recommend dividend of 18 per cent., less tax, which entitles solicitors whose accounts with society during last year amounted to £50 to 6 per cent bonus. Directors propose to write off £6,134 appearing in balance-sheet as business purchased, add £5,000 to reserve, carrying forward £12,094, subject to corporation tax.

ASSOCIATED NEWSPAPERS, LTD.—Interim dividend on deferred shares for quarter ending March 31st, 1925, of 2s. per share (at the rate 40 per cent. per annum), less tax. Warrants will be posted on April 7th.

NEW COMPANIES.

LONG-ACRE PRESS, LTD.—Capital £100,000 in £1 shares; to acquire from the M.L. Publishing and Copyright Co., Ltd., and to hold, use and exercise the exclusive licence for a term of years to print and publish the *People* newspaper; to acquire and hold all the issued ordinary shares of the said M.L. Publishing and Copyright Co., Ltd., and other assets, and to carry on the business of newspaper and periodical proprietors, printers and publishers, stationers, booksellers, etc., and to adopt agreements (a) with the above-named company, (b) between Right Hon. Earl of Pembroke and Montgomery and J. B. White of the first part, J. E. Ward of the second part, and a trustee for the company of the third part, and (c) with Odhams Press, Ltd. Directors: W.J.B. Odhams, J. S. Elias and Lieut.-Colonel A. Bellamy. Registered office: 93-4, Long acre, W.C 2.

STADIUM PRESS, LTD.—Capital £50,000, in 176,000 participating preference shares and 24,000 ordinary shares, all of 5s. each; to adopt an agreement with F. Howard and to carry on the business of publishers and owners of periodicals, newspapers, magazines and other literary works, printers, bookbinders, booksellers, etc. Subscribers: W. R. Semken and Agnes Morrison. Solicitors: J. D. Langton and Passmore, 2, Paper-buildings, Temple, E.C.

BIRDSALL AND SON, LTD.—Capital £35,000, in £1 shares (13,000 5 per cent. preference and 22,000 ordinary); to acquire the business of stationers, printers and lithographers carried on at Wood street, Northampton, and elsewhere as "Birdsall and Son." Private company. Directors: A. Birdsall and Mrs. N. C. Birdsall. Registered office: 44, Wood street, Northampton.

MEARS AND CALDWELL, LTD.—Capital £10,000, in £1 shares; to acquire the business carried on at Broadway, Ludgate-hill, E.C., as "Mears and Caldwell," to adopt an agreement with W. A. Mears and H. H. Caldwell, and to carry on the business of wholesale or retail stationers, printers, lithographers, stereotypers, electrotypers, engravers, photographic printers, photo-lithographers, box and paper bag makers, cardboard manufacturers, manufacturers of playing, fancy and other cards and valentines, etc. Private company. First directors: W. A. Mears and H. H. Caldwell. Registered office: Cranmer Works, Cranmer-road, S.W.9.

CONTINENT PRINTING AND PUBLISHING CO., LTD.—Capital £7 500 in 7,500 founders' shares of £1 each; to adopt an agreement with Eccoli Valerio and Sons, Ltd. (vendors) regarding the acquisition of the vendors' printing and publishing business established at 14, Little Howland street, W., and the property and rights described in the agreement, and also to carry on the business of dealers in and importers of publications and printing matter of all kinds, and that of advertising agents, etc. First directors: Frank Vaughan Magrini, Emilio Pesci, Leopoldo Tomba, Wm. B. Capper, Diomede Caprotti. Registered office: 8, Moor-street, Soho, W.1.

BRITISH UNITED TOY MANUFACTURING CO., LTD.—Capital £3,000, in £1 shares; manufacturers of and dealers in toys, fancy goods, etc., relief stampers, die sinkers, printers, engravers, box-makers, etc. Private company. First directors: J. Renvoize, senr., J. Renvoize, junr., and S. Renvoize. Registered office: Union Works, Carysfort-road, Stoke Newington, N.

R. M. ROCHE AND HULL, LTD.—Capital £1,500 in £1 shares; to acquire the business of a printer, bookbinder and stationer now carried on at Liverpool by R. M. Roche as R. M. Roche and Co. Private company. First directors: R. M. Roche and C. J. Hull. Solicitor: P. J. Hackett, 15, Lord street, Liverpool.

DUNCAN SCOTT, LTD.—Capital £100 in £1 shares; proprietors and publishers of newspapers, journals, magazines, books and other literary works and undertakings, printers, stationers, advertising agents, etc. Private company. Directors: J. Scott-Taggart, F.Inst.P., A.M.I.E.E, and Dorothy Scott-Taggart. Registered office: Bush House, Kingsway, W.C.2.

GENERAL ART WORKS, LTD.—Capital £1,000 in £1 shares; exclusive agents of the American Art Works of Ohio, U.S.A., in Great Britain and Europe, and advertising contractors and agents, designers of advertisements, printers, and sellers of art advertising calendars, art blotters and fans, manufacturers of and dealers in celluloid, leather and advertising novelties, lithographic and gummed plated signs and displays, etc. Private company. First directors: R. H. Kulka and N. Blanco White, D.S.O., M.C. Solicitors: T. and N. Blanco White, 10, Bedford row, W.C 1, and 77-79, High-street, Watford, Herts.

PREMIER ADVERTISING SERVICE, LTD.—Capital £100 in £1 shares; to acquire the businesses of advertisement contractors heretofore carried on by William Cooper as the Premier Advertising Service at 38, Angell-Road, Stockwell, and by W. D. Cooper, under his own name and as "Paragon Publicity Ads." at 179, Waterloo-road, S.E. Private company. Directors: W. Cooper, W. D. Cooper, S. Wickens and J. S. Wright. Registered office: 268 and 270, Kennington-road, S.E.11.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

CONNOLL AND COLES, LTD. (printers' engineers, etc., London).—Particulars filed of £500 debentures authorised March 24th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital (subject to a debenture for £250 dated August 19th, 1924), the amount of the present issue being £250.

EYRE AND SPOTTISWOODE, LTD.—Particulars filed of £25,000 debentures authorised March 20th, 1925, and covered by trust deed dated March 24th, 1925, charged on certain properties in Hackney and the City of London and the company's other assets, present and future, including uncalled capital (subject to prior trust deed dated March 31st, 1911), the whole amount now being issued. Trustees: J. J. C. Mack and F. Cook, 3 and 4, Cheapside, E.C.

ODHAMS PRESS, LTD.—Satisfaction in full on December 30th, 1924, of mortgage dated February 8th, 1921, securing £4,000. (Notice filed March 26th, 1925).

PATERNOSTER PRINTING CO., LTD.—Mortgage on Bylock Hall Works, South-street, Ponder's End, dated March 13th, 1925, to secure £300. Holder: F. C. T. Mortimer, 85, Hatton Garden, E.C.

DIXON PRINTING CO., LTD.—Mortgage dated December 1st, 1924, to secure £1,500 and further advances, charged on certain land and premises in Strickland-place, Kendal. Holders: Halifax Permanent Benefit Building Society. (Registered March 5th, 1925, by permission of the Court).

NORTHERN PHOTO-ENGRAVING CO., LTD. (Manchester).—Particulars filed of £1,800 debentures authorised March 24th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

PAVITT AND BARTLETT, LTD. (dealers in paper, twine, cord and packing materials, etc., London).—Particulars filed of £5,000 second debentures authorised January 29th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £2,300.

GILCHRIST BROS., LTD. (photo process engravers, etc.).—Three mortgages on properties in Brunswick-terrace and claypit-lane, Leeds, with plant, etc., all dated March 6th, 1925, to secure all moneys due or to become due from the company to the National and Provincial Bank, Ltd., respectively.

MATHIESON AND CO., LTD. (publishers, booksellers, etc., London).—Statement under Section 12 (old charges outstanding on July 1st, 1908, now first registered); mortgage debentures dated December, 1895, securing £2,000.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

S. S. B. Millar, A. J. Green, E. S. E. Double, J. B. L. Martin, and A. G. Hackett, advertising agents and consultants and printing contractors, at Bridge House, 181, Queen Victoria-street, London, under the style of the Doreill Advertising Co.

H. Woodcock and B. A. Prior, booksellers and stationers, at John William street, Huddersfield, under the style of Woodcock and Prior.

THE BANKRUPTCY ACT, 1914.
RECEIVING ORDER.

P. R. Mackie, the Bungalow, Beetham, near Milnthorpe, Westmorland, papermaker.

Future of the News-print Industry.

In an interview in New York recently, Mr. A. R. Graustein, president of the International Paper Co., said that the trend of economic developments in the past 20 years had shown clearly that the future of the news-print industry was in Canada. American paper mills, which could not compete with the cheap wood supply and continuous water power of the Canadian mills, he said, would have to be diverted from news-print production to other kinds of paper.

The Printing Crafts Guild.

Visit to Messrs. Furnival's.

A visit to the Reddish Ironworks of Messrs. Furnival and Co., Ltd., printers' engineers, is always popular amongst Lancashire, Yorkshire and Cheshire craftsmen, therefore it was no surprise on Saturday last to observe an attendance of over eighty members desirous of seeing for themselves the building of machines that print perfectly, whether the work be one or more colours of the highest class. The party was met by Messrs. A. Harrison, R. E. Forshaw, H. Lee, H. Standring, W. I. Fielding, H. Yates, Shorrocks, Clarke and Baines, each of whom took in hand a section of the visitors and conducted them through the drawing office and around the works, where all sizes of letterpress and lithographic printing machines and guillotines were in progress or ready for dispatching to various parts of the printing world.

The new Furnival reversing motion on the two-revolution press entirely eliminates the overhang, and does away with the necessity of reducing the strength of the type bed though cutting down its weight, and, therefore, gives a full strength type bed with a full impression. The Furnival extended pile delivery is a new and improved style which obviates the necessity of continually removing sheets by hand, thus reducing the liability to smear the freshly printed work, and, being jogged up, is a great saving of time in handling.

Two-Colour Offset Press.

The Furnival two-colour offset press found favour with about thirty lithographic critics who have made a special study of offset work. The machine is designed to provide a two-colour press containing all the valuable features of the most up-to-date single-colour presses, and also to possess a delivery at a convenient height in full view of the operator, without the printed sheet passing around a drum, along delivery sticks, strings or tape, which would have the disadvantage of smearing the printed surface. The sheet, therefore, after having left the feeder passes through the machine, is printed, and delivered printed side up, without having been touched on the printed side. The machine consists of six cylinders. There is a large impression cylinder which makes one revolution per cycle of machine, and then there are five cylinders, half the diameter of the impression cylinder, these being grouped around the impression cylinder in the following manner: A transfer cylinder on the delivery end is simply used for making possible this particular and valuable open delivery. Beneath the feed board there are two pairs of cylinders, that is, two blanket cylinders in contact with the impression cylinder, printing surface, and two plate cylinders in turn in contact with these blanket cylinders. Grouped around the two plate cylinders are the inking and the damping rollers. The inking and distribution of ink are quite ample for every class of work, as there is constant double rolling for each impression. There is a separate damping apparatus for each plate, and with a slight alteration of link, this can be made to damp the plate once or twice for each impression. The supply of water can be regulated from nothing to a maximum. The plates and blankets are as easy to get at as those on a single-colour press, and extremely simple arrangements make it possible to adjust one cylinder either longitudinally or circumferentially with respect to the other, thus ensuring that the design on the plate will pitch exactly in position with the design on the other plate. By means of depressing a pedal the machine moves around very slowly indeed in a forward direction, which is most helpful to the operator when fixing his plates or blankets. The shafts are journalled in strong eccentrics which are adjustable for pressure and which can be easily set by coupling nuts with left and right-hand screws in them. It is essential that during the printing the centres of the toggle levers and the coupling rods should be in dead straight line, so as to form a lock which will resist the heaviest impression, and this is obtained quite easily by means of the coupling nuts above referred to. The sheet is fed to hinged lays outside the impression cylinder. These lays lift as soon as the grippers have closed on the sheet, and fall into position again as soon as the tail edge of the sheet has passed. This gives more than half the circumference of the impression cylinder for laying the next sheet. The sheet passing around is then transferred to the transfer cylinder grippers and after one revolution of this cylinder is re-transferred to other grippers which carry it round for its impressions from the two-blanket cylinder surfaces. The sheet then passes under another laid sheet on feed board which is slightly lifted and is taken by the delivery grippers, carried forward, and laid on to a set of tapes which, winding from underneath, allow the sheet to fall carefully on the delivery board. Absolute register is obtained during the transference of the sheet between the impression and the transfer cylinders, by the sheet being nipped between the surfaces; also, by having the sheet held by both sets of grippers for a distance of half an inch or more during the nip, so that the sheet is under perfect control during transference. This is a most important matter as it is impossible for a disturbance of register to take place. The machine is arranged for printing either paper or cards, and when changing from one to another, register segments and split gears are provided which can be so set as to eliminate all back-lash from between the teeth of the wheels. By depressing a foot pedal on the feeder's platform, the cylinders are automatically separated and checked. This is necessary when running the machine without sheets being passed through, and also when a sheet is badly fed. When the cylinders are checked the inking rollers are automatically lifted. For inking-up plates while cylinders are checked, it is only necessary to alter the positions of the check handles. The damper duct roller supply ceases each time the cylinders are checked, and the damping rollers can be drawn right away from the cylinder by the simple movement of a handle. The firm claims for this machine:—(1) Quick speed for rapid production; (2) perfect register everywhere; (3) solid impression over a full-sized plate; (4) good inking power and sensitive damping; (5) undamaged print when delivered; (6) ease of working for pressman; (7) long life.

HEIDELBERG

A Full Automatic that has come to stay!

THE following important announcement has been made by the Printing Machine Branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers:—

"AFTER full investigation, the above Union have agreed to one member operating two Heidelberg Automatics."

THINK what this means to you in costing!

ONE minder supervising two Heidelberg Automatics can produce the same output as five minders controlling five hand-fed platens.

THIS is just one of the many practical advantages gained by using Heidelbergs. The others will be readily obvious when you see them at work. Ask us for a demonstration—on your own formes, if you wish.

£185 Erected, Left Running, Complete. Guaranteed Speed 2,500 prints per hour.

HEIDELBERG AUTOMATIC PLATEN CO.
26, LONG ACRE, LONDON, W.C.2.
'Phone: Gerrard 3340.

Digitized by Google

The Improved Express Litho printing machine is claimed to be unequalled in capacity for turning out the very best class of work at a high speed, its simplicity of arrangement, solidity of construction, and rolling and inking power are such that we find British printing firms have 16, 35, 38, 50, and 160 machines in their several establishments. Those firms desirous of using their flat-beds for offset work may have an offset arrangement fitted to their machines, the time required for changing from an offset to a direct printing being a matter of a few minutes.

Of course, the lithographer having a large output of bronze work always gives preference to the Mark Smith Patent Safety Vacuum Bronzing Machine which has proved itself to be so profitable that it has found its way to all parts of the world. The Drum Cylinder Machine, the Cutting and Creasing Press, the Wharfedale, the Reddish Jobber, the Plate Graining Machine, and the Express Self-clamp Guillotine Cutting Machine came in for attention during the two hours' progress through the works. With respect to the last named, the clamping is effected by hydraulic pressure, which is self-contained in the machine and is believed to be the most reliable clamping power of any machine made. It requires the minimum of power to drive and is the quickest self-clamp on the market.

Firm Thanked for Hospitality.

The hospitality of Messrs. Furnival and Co., Ltd., is well known, and before the party dispersed all were requestsd to be seated in the spacions dining room where a knife-and-fork tea was an agreeable surprise and was enjoyed by all.

At the conclusion of the feast, Mr. John Taylor, president, said his earliest recollection of Messrs Furnival and Co., Ltd., went back many more years than he cared to recall, but he had always found the firm generous in giving facilities for those connected with the Old Princess street Technical School and the present Municipal College of Technology. No firm in the district had done more for the students than had Messrs. Furnival, and they had always encouraged suggestions from practical craftsmen. Even that day whilst going around the works, numerous questions had been asked about the workings of improved portions of the machinery and answers had been freely given. On behalf of the Guild he thanked them for the opportunity of visiting the works, and for their hospitality.

Mr. H. Lee, chief draughtsman, said President Taylor, being a practical and keen craftsman, knew what he was speaking about and any advice he gave was always valuable to the craft. Various machines they had seen erected should have been dispatched to their several homes, but the firm desired the party should see and offer suggestions, as those who ran machinery were able to do. Not all suggestions were feasible, nor practical, yet many a good hint had been exchanged between the printer and engineer on such visits as the one they had had that afternoon. On behalf of the firm he thanked them for their attendance, hoping they had increased their knowledge and appreciated some of the difficulties the engineer had to overcome.

Mr. F. Hewitt also added a few words of advice and praised the beauties of Reddish Vale.

WEE MAC.

Selling Paper Under Cost Price.

Bankruptcy Court Admission.

An application was made on March 31st to Mr. Registrar Mellor at the London Bankruptcy Court for an order of discharge on behalf of Wm. Rowe, late of 29, New Bridge-street, E.C., trading as Wm. Rowe and Co., paper and board agents and export merchants. Mr. V. Armstrong, official receiver, reported that the bankrupt failed last October with ranking liabilities £1,774 and assets that had yielded £55; a small dividend would be paid. He acted as a traveller in the paper, printing and allied trades until 1921, and then commenced on his own account as a paper merchant under the style of "W. Rowe and Co." In June, 1923, he and two other paper merchants entered into a partnership under the style of Fibre Research and Development Co. with a view to obtaining and exploiting concessions in the Sudan and Brazil for developing fibres, papyrus, etc., but that venture was not a success. He invested £50 in it and a company registered and promoted by the partnership under the name of Sudan Papyrus Products Syndicate, Ltd., was also unsuccessful owing to lack of financial support. The bankrupt attributed his failure and insolvency to loss in trading brought about principally by heavy overhead charges, selling at a small margin of profit, and in a lesser degree to selling paper under cost price. The application was opposed by the official receiver on the grounds (1) insufficiency of assets to equal 10s. in the £ on the amount of the liabilities; (2) omission to keep proper books of account; (3) trading with knowledge of insolvency; and (4) grave misconduct as a trader in obtaining credit after February, 1924, under the false representation that he was dealing with his stock in the ordinary way of his trade, and further, in dealing with such stock by sales under cost price.

The learned registrar said the bankrupt knew in the middle of 1923 that he was insolvent. He then called a meeting of some of his creditors, who apparently sympathised with, and allowed him to continue the business. The report showed very clearly that during 1924 the bankrupt was not carrying on the business in a legitimate manner, but was buying paper and selling it under cost price. That, of course, was a very serious charge, especially as those goods had not been paid for. As an explanation of those sales, the bankrupt had stated that he sold the paper before he purchased it. Had it been an isolated transaction, something might be said in mitigation, but that was by no means the case and the sales under cost amounted to misconduct. The discharge would be suspended for three years and six months.

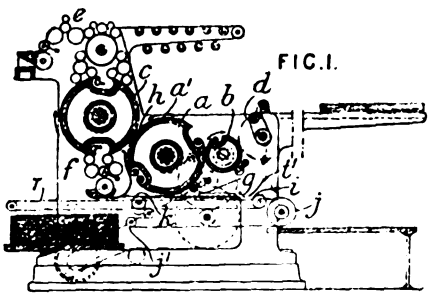
New Inventions

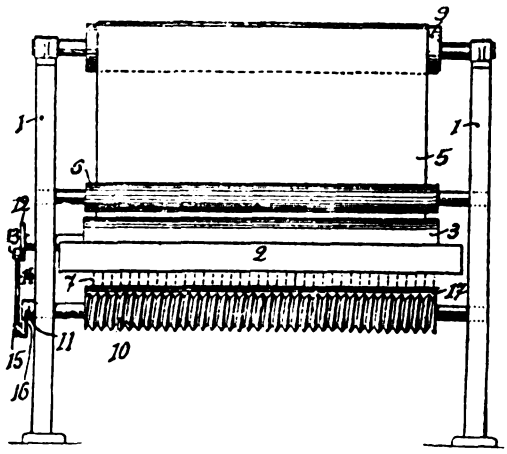
Offset Machine Improvements.



In travelling cylinder offset printing, as patented by Mr. J. J. Ormond, the rotation of the offset roller is regulated by its soft surface contacting with a fixed guide rail or rails as it is moved over the printing plates. Fig. 3 shows a sectional side elevation and Fig. 4 shows an end elevation of a machine in which the offset roller 5, carried forward on moving chains 20, rolls over inked printing plates 2, 2^1, 2^{11}, each having part of a design or colour, and deposits the design on a surface on a plate 4. The plates are spaced apart a distance equal to the circumference of the roller 5 which receives its rotation by sagging into contact with guide rails 25, 26 level with the printing plates. The shafts 10 of the

sprocket wheels 12, 13 carrying the chains are mounted in adjustable bearings. When the roller 5 has been carried round as far as the bottom of the sprocket 13, it is rotated rapidly by belts 32 moving in the opposite direction which belts bear on the ends of the roller. When spinning round thus, the roller passes over a horizontal rotating disk 40, which cleans off any ink from the roller surface. A cleaning solvent may be applied to the disk and its vertical shaft 41 is preferably hollow to receive the dirt scraped off by a scraper 42. After leaving the disk, the roller comes in contact with a broad wiper-belt 45 moving slowly in the same direction. This belt 45 is formed of thin textile fabric supported by thin steel and cleans and polishes the roller surface. When the roller reaches the sprocket 12 it is lifted off the belts and travels round until it mounts the curved ends of the fixed guide rails 25, 26 which stop its spinning and cause it to rotate in the opposite direction for printing as before. The printing plates may be electrotypes, etched or engraved plates, lithographic or stereotype plates, etc. Specification 223,690 is referred to.

Rotary Offset Machines.

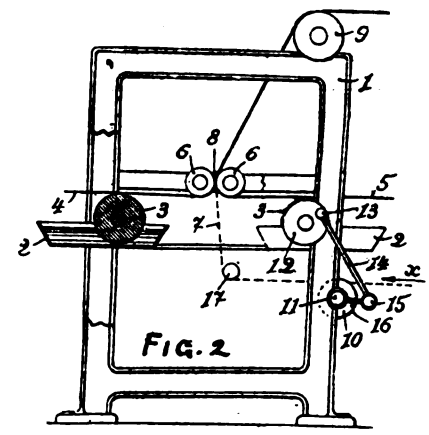


In a rotary offset machine, patented by Mr. A. Fallot, of the kind in which an offset cylinder as *a* coacting with an impression cylinder

b of half its diameter is formed with a sheet-carrying surface a^1 which takes the sheet and delivers it printed side up to a delvery device arranged beneath the printing cylinder *c* is constructed with suction orifices *h* in the surface a^1 for holding the sheet in position as it is carried by this surface, and the sheets are stripped from the cylinder *a* by strippers *g*, or are blown off by compressed air, and are delivered in a pile by a drop-sheet delivery device. The sheets are fed to the impression cylinder *b* by grippers *d*, and the plate cylinder *c* is fitted with damping rollers *f*, and inking rollers *e* spaced apart sufficiently to permit of hand-wiping of the printing plate. The printed sheets are received by tapes t^1 passing over pulleys *i*, *k*, driven in the same direction and speed as the cylinder *a*. The pulleys are mounted in arms *s*, s^1 which are oscillated to cause descent of the tapes *t* to deposit the sheets on tapes *t* passing over fixed pulleys *j*, j^1, and pulleys *l*, *m* carried by a sliding rack *z* which is reciprocated by a crank *x* which reciprocates a wheel *r* in gear with a fixed rack *y*, a wheel r^1 on the shaft of wheel *r* engaging the rack *z*. As the pulleys *l*, *m* move to the left they are held against rotation by pawls, and the pulleys *j*, j^1 rotate, but on the reverse movement only the pulleys *l*, *m* rotate, and the sheets are thus dropped on to the pile. Specification 13,793/15 is referred to.

Reinforced Wrapping Paper.

Wrapping paper made by pasting together two webs of paper and enclosing re-enforcing fibres or thread between the two layers is generally difficult to wind into rolls, especially when it is narrow, because of the uneven thickness of the finished paper. The



succeeding layers of paper in the roll have a tendency to slip owing to the presence of the re-enforcing threads.

A recent invention overcomes this tendency by passing the re-enforcing threads between the threads of a screw, which is given a suitable oscillating motion. In this manner the re-enforcing threads enclosed between the two plies form wavy instead of straight lines.

Figure 1 gives a diagrammatic front elevation, and Figure 2 a side elevation, partly in section, of a suitable machine for obtaining this result.

Webs 4 and 5 pass over the gumming rolls 3, partly immersed in the troughs 2, which are filled with glue or with tar. The two sheets are pasted together by passing between rolls 6, and at this point the threads 7 come between them to re-enforce the finished wrapping paper.

The re-enforcing threads pass between the threads of screw 10, which is driven through

lever arm 16 and connecting rod 14 from disc 12. As the radius of rotation of point 13 is smaller than lever arm 16, rotation of point 13 causes an oscillating motion of the lever 16, and the re-enforcing threads are displaced alternately to the right and left. By using two screws and making them oscillate in opposite directions, each with one set of re-enforcing threads, there will be formed a criss-cross network.

Sand Paper.

According to an invention by the Minnesota Mining and Manufacturing Co., flexible and moisture proof sand paper, or like composite structure, comprises a paper or other base upon which the abrasive is secured by a binder which permeates the base, a sizing coating then being applied to the abrasive, after which the paper is baked at a temperature of about 140 degs. F. The binder comprises an oil, for example, linseed oil or china wood oil, rosin, drying agents and thinners, and the sizing coating may be of substantially the same composition, but with more thinner. The paper also prior to the baking may be coated on the back with the sizing coating; the paper alternatively may be waterproofed by means of oil, grease or wax, with which the binder mixes or combines. The sizing coating may include natural or synthetic shellac, treated cellulose or synthetic rosins. After completion of the sheet, the base may be thinned down to give greater flexibility. Specifications 194,274 and 219,341 are referred to.

THE late Harry Smith, Chester-le-street, Durham, paper merchant, left £8,378.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

TRADE has seemed to be a trifle better on the merchanting side during the last week or so. There have been some orders for printings and coated papers, and in the cover paper section business has been quite good. Printers are entering upon, or rather have entered upon, one of the busiest periods of the year. There is usually a big push on to fill Easter and spring requirements, and just at this time the printing industry is working under some pressure. Among the chief classes of work in hand are railway posters, handbills, booklets and guides for spring and summer excursions, motor catalogues and the whole host of folders, brochures and broadsheets employed by manufacturers to catch the prospective car buyer while the spring feeling has roused the annual desire for a motor. Then there are the sports catalogues, furniture and housing booklets (again that spring feeling and wedding season), holiday resort publicity, etc., etc. Altogether, printers and papermakers are beginning to owe quite a lot to the new school of thought in advertising. It is open to question whether advertising and publicity are not already accounting for a larger consumption of printing than commerce and industry. While we are waiting for the commercial demand to grow, there is the satisfaction of knowing that the publicity demand is developing.

* * *

A PROMINENT papermaking concern in the United States has a department devoted especially to the creation of forms and systems designed to help different branches of industry, trade and commerce in their interior organisation and routine. Suggestions are made and put forward for the use of paper in hundreds of new directions. The user of stationery and printed matter is educated in the application of print to paper and the administration in industry is helped by the schemes for organisation put forward by the papermaker. If this is too ambitious a scheme for the British manufacturer, who too often acquires the habit of leaving a market to develop itself, it can at least leave the thought that there is something in a market that can be created. Certain English houses have recognised this fact; for example, there are the new fields in containers, in crepe papers, in papers of colour and irregular size, in gummed tapings and gummed ranges, in offset cover and book papers, in elegant cover papers and lastly in British boards.

* * *

SOME day we shall have the paper trade specialist with a department devoted exclusively to the creation of business by means of made-up dummy booklets for the advertising field. Adopting standard sizes and branded papers with skilful classification according to purpose, it does not require a vivid imagination to realise the latent possibilities in such a scheme. Such a service would be advertised and extended to direct users of booklets, printers and advertising specialists. Under existing conditions neither the printer nor the advertiser can give quick and adequate service; the selection of paper is out of the hands of the papermaker or merchant, and the best that they can do is to supply valuable assortments of full sheets of paper without recompense or any reasonable guarantee that they will be used. A man trained in good printing and experienced in paper, with sound technique and a wide knowledge of advertisers and advertising, would bring the foundation of a new field to the distributor of papers used in the production of booklets and all the printed matter associated with advertising and selling.

Mr. F. L. Cayzer.

Complimentary Luncheon and Presentation.

Well-deserved honour was done to Mr. F. L. Cayzer on Monday, when at the Connaught Rooms he was entertained by his friends in the paper trade to a complimentary luncheon. Mr. Cayzer has spent close upon 50 years in the service of the House of Spicer, and the occasion of his retirement could not be allowed to pass without the bestowal of some mark of the high esteem in which he is held by a large circle of friends. Mr. Chas. Newell, C.C., the

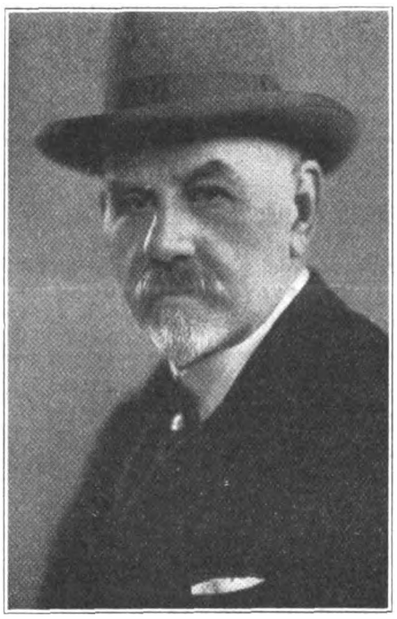

Photo. R. N. Haile, Bognor.

MR. F. L. CAYZER.

President of the Stationers' Social Society, presided over a gathering representative of the business and social interests with which Mr. Cayzer was identified, and those attending were: Messrs. A. A number of gifts handed to Mr. Cayzer included a solid silver rose bowl and a solid silver spirit flask, while there had been provided for Mrs. Cayzer a case of Coalport hand-painted coffee cups and saucers, silver-mounted. The rose bowl bore the following inscription:—

"Presented to Frank Lloyd Cayzer, Esq., as a mark of esteem, with the best wishes of his friends in the Paper Trade, on his retirement, 30th March, 1925."

The chairman, in handing over the gifts, said they were tokens of the lasting esteem and affectionate regard of Mr. Cayzer's many friends.

John Dickinson and Co., Ltd.

In their report, for the year ended December 31st, 1924, the directors record their deep sorrow at the death of their chairman—Mr. Henry Godfrey—which took place with great suddenness in November last. The report states that the business has continued to expand; the company's mills have been fully employed throughout the year. The net profit, after providing for depreciation, income and Corporation Profits Tax, and interest on debenture stock, amounted to the sum of £168,640 11s. 5d., which, with the amount brought forward from the last account, viz., £77,750 5s. 3d., makes a total to the credit of profit and loss account of £246,390 16s. 8d. Dividends of 5 per cent. per annum have been paid on the preference stocks, and an interim dividend of 4 per cent. was paid on the ordinary shares on October 1st, 1924, resulting in an available balance of £187,657 9s. 6d. at December 31st, 1924. Out of this sum, £8,475 is applied to the debenture stock redemption in accordance with the terms of the debenture trust deed. The directors recommend that a further dividend of 6 per cent. be paid on the ordinary shares (making 10 per cent. for the year), that £50,000 be carried to the general reserve, and the balance of £66,765 17s. 8d. be carried forward to the next account. Mr. F. G. Hawdon, who was appointed a director of the company on December 9th, 1924, and Major R. Bonsor, a director of the company, retire from office in accordance with the Articles of Association, and, being eligible, offer themselves for re election. The directors have pleasure in expressing their great appreciation of the loyal and very efficient service rendered by all in the employ of the company.

Exhibitions

The Seventh International Printing, Stationery and Allied Trades' Exhibition

is one of the outstanding topics of conversation in the trade at the moment, and most of us are now occupied in making arrangements necessary in order that our show shall be as attractive as possible.

Has it struck you, however, that as there are wheels within wheels so there are exhibitions within exhibitions? The Special Exhibition Number of "The British and Colonial Printer and Stationer," on May 7th next, will be an exhibition which will excite a wider interest even than the Exhibition itself in that it will reach our subscribers in the remote corners of the earth who are at too great a distance to actually visit the Royal Agricultural Hall.

Then again it will serve the purpose of informing the trade as to the exhibits which they should see, and will in fact be in every respect a guide for discriminating visitors to the greatest event in Printerdom.

It is essential that your announcement should be prominently displayed in this issue.

Space is now rapidly being booked.

One of our representatives is at your disposal.

"Procrastination is the thief of time."—Let us know to-day when he shall call upon you.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

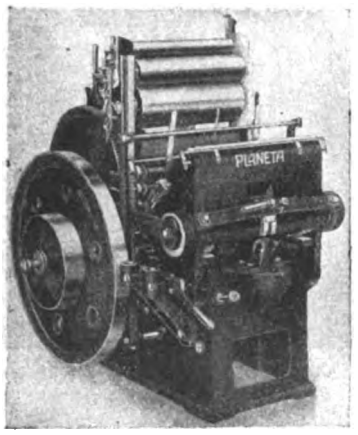
Stability

SINCE the 17th Century, in the reign of Charles I, through periods of glut and financial stress, boom and commercial prosperity, London has been the hub of the world's finance. And the imposing grey stone building that borders Lothbury to the North and Threadneedle Street to the South has stood through its 230 years of financial history, a monument of stability.

In commerce, as in finance, public confidence is vested in those firms who observe but one code of business ethics; whose reputation has been built up by fair dealing and honest merchandise; whose products have stood the test of time.

For almost four score years—since 1848—the House of Winstone has progressed, consolidating public confidence by supplying only the best that British craftsmanship can produce.

Inks, rollers, time-cost-and-labour-saving sundries and specialities supplied by the House of Winstone carry the acknowledged guarantee of value—the reputation of 77 years' unfailing service to the printing trade.



PROGRESS SERIES: No. 4.

The Bank of England was founded by William Paterson (a Scotsman) in 1694 to stabilize the monetary system. Chartered by Act of Parliament, July 27th, a corporation to be styled "The Governor and Company of the Bank of England," as official bankers to the Government, with sole rights to issue bank notes. The subscribed capital on formation was £1,200,000.

The present Proprietors' Capital is £14,553,000.

Legal Liability of the Printer.

Summary of Counsel's Opinion taken by the Contracts and Legislation Committee of the Federation of Master Printers.

The following article, prepared in response to inquiries by members of the Federation of Master Printers, is reproduced by courtesy of the Federation "Members' Circular."

Gratuitous Bailee.

Where a customer delivers goods to a printer for safe custody and does not agree to pay any remuneration to the printer for looking after the goods, the printer is said to be a gratuitous bailee.

A printer who is a gratuitous bailee must exercise such care in looking after the goods of the customer as he would exercise in looking after his own goods, and must use such skill as he actually possesses.

If the goods of a customer are damaged or lost while in the possession of a printer as gratuitous bailee, then the printer must prove that the damage or loss was not the consequence of his act or default. For example, the printer will not be liable if the goods of the customer were accidentally destroyed by fire. And even if the goods are lost, the printer will not be liable if he can prove that the goods were kept in a proper place and under the charge of proper persons and that his arrangements for the safe-keeping of the goods were reasonably sufficient.

Where goods of a customer are damaged or lost while in the possession of a printer it will be by no means easy in the majority of cases for the printer to establish to the satisfaction of the Court that the damage or loss was not the consequence of his act or default.

Bailee for Reward.

If the printer receives from the customer remuneration for looking after the goods, then the printer will be in the position of a bailee for reward, and will be under a duty to the customer to exercise a higher standard of care and skill in looking after the customer's goods than is demanded of him as a gratuitous bailee.

He must exercise the care and skill which would reasonably be expected from a skilled printers' warehouseman.

The duties of a bailee for reward have been laid down by Lord Watson, in the case of Brabent v. King (1895) A.C. 632, in the following terms:—

"They were therefore under a legal obligation to exercise the same degree of care towards the preservation of the goods entrusted to them from injury which might reasonably be expected from a skilled storekeeper acquainted with the risks to be apprehended either from the character of the storehouse itself or its locality; and that obligation included not only the duty of taking all reasonable precautions to obviate these risks but the duty of taking all proper measures for the protection of the goods when such risks were imminent or had actually occurred."

If the goods are damaged or lost while in the custody of a bailee for reward, the burden of proving that the damage or loss was not the consequence of his act or default rests upon him in the same way as upon a gratuitous bailee, but, as the standard of diligence demanded in the case of a bailee for reward is higher than in the case of a gratuitous bailee, the burden which will be thrown upon the bailee for reward in establishing that he was not negligent will be greater.

Absolute Liability.

In certain cases, mentioned below, the printer is under an absolute liability for the damage or loss of the customer's goods, and will be liable to pay damages to the customer whether or not such damage or loss was caused by the act or default of the printer.

Liability of the Printer for MSS., Blocks, Stereos, and such-like Articles.

Where a customer hands to a printer MSS., blocks, stereos, or other articles, and does not at the same time place any order with the printer, then the printer will be in the position of a gratuitous bailee.

If an order be given to the printer which will necessitate the use of such blocks, stereos, or other articles, then during the period from the placing of the order until its completion the printer will be in the position of a bailee for reward.

If, at the request of the customer, the printer retains possession of the MSS., blocks, stereos, or other such articles after the completion of the order, then the printer will be in the position of a gratuitous bailee.

If the printer retains possession of such articles after their return has been demanded by the customer, then the printer will be under an absolute liability, and would be liable to the customer for the full value of such goods, and in addition thereto he would be liable in damages for their detention. Unless the printer had made such blocks or stereos for the customer and had not been paid in respect thereof, he would not be entitled to claim a lien over them.

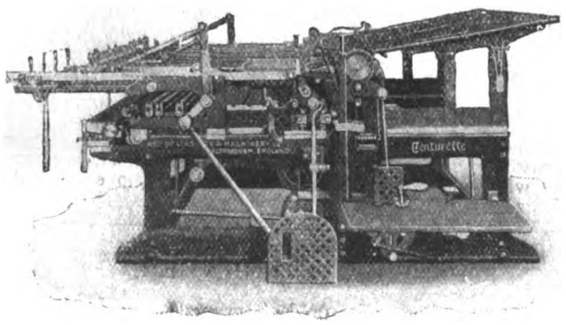
Liability of a Printer for Paper and such-like Goods.

Where a customer delivers paper to a printer and does not place any order with the printer, the printer will be in the position of a gratuitous bailee unless the customer agreed to pay for the storage of the paper.

As soon as an order is placed the printer becomes a bailee for reward in respect of that part of the paper which is appropriated for the execution of the particular order, and the printer is none the less a bailee for reward although he does not include any specific sum in the contract price for the storage of the paper.

If, after the order is completed, the customer does not take delivery of the work executed, but requests the printer to retain custody of it without agreeing to pay any sum for storage, the printer becomes a gratuitous bailee in respect of such completed work.

If the printer breaks his contract and does not deliver the paper duly printed in accordance with the order either within the contract time or within such further time as shall have been agreed between the printer and the customer, the printer will be under an absolute liability in respect of such paper.



Shaw v. Symmons (1917) 1 K.B. 799.

In this case a plaintiff entrusted books to the defendant, a bookbinder, to be bound under a contract to deliver them when bound to the plaintiff within a reasonable time as and when required by him. The plaintiff having requested the defendant to deliver the whole of the books when bound, the defendant failed to deliver them within a reasonable time and they were subsequently burnt in an accidental fire on his premises. It was held that the defendant was liable in damages for the loss of the books.

Liability of the Printer when he Supplies the Materials.

If the printer supplies the paper or other materials necessary for the order, those materials are then at the risk of the printer until the ownership thereof has passed to the customer. The materials remain the property of the printer and are therefore at the risk of the printer notwithstanding that such materials have been definitely set apart for the execution of the particular contract, and such materials remain at the risk of the printer until the contract has been completed.

The Centurette, made by Linotype and Machinery Limited at Altrincham, Cheshire, is size for size the fastest Two-Revolution machine on the market.

It prints Double Demy at 3,000 per hour, and the quality of the work is above that usually obtained from a two-roller machine.

This result is obtained by the excellence of the engineering work put into this press.

Many Centurettes are in use for colour work.

It is made in two styles—(1) with printed-side-up delivery as illustrated above, or (2) with fly delivery.

Fuller details will be forwarded on application to

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON

If the printer had contracted to deliver the finished work, such work will remain at the risk of the printer until delivery is effected. If, however, delivery is to be given at the works of the printer, the risk in the goods will then pass from the printer to the customer when the job has been completed and the customer notified and given a reasonable opportunity of inspecting the completed job.

If the customer fails to take delivery the printer will be in the position of a gratuitous bailee unless the customer agrees expressly or impliedly to pay the printer warehousing charges.

If the customer places an order with the printer for the printing of a specified number of sheets to be bound as and when required by the customer, questions may arise as to whether the printed but unbound sheets are at the risk of the owner or of the printer.

If there be really two contracts—one whereby the printer agrees to print the sheets, and the other whereby he agrees to bind the sheets—then as soon as the sheets are printed and the customer given an opportunity of examining such sheets if he so desires the sheets become the property of the customer, but so long as the sheets remain in the custody of the printer he must exercise the care of a gratuitous bailee. As soon as an order is placed with the printer for the binding of the sheets then he must exercise the care of a bailee for reward.

If, however, the contract to print and bind is really one entire contract, different considerations apply.

As each instalment of books is bound and the customer given an opportunity of examining such instalment the property therein passes to the customer, but the property in the printed but unbound sheets remains with the printer and such sheets are at his risk until bound in pursuance of the contract.

A bailee is a person who accepts goods in custody from another person.

26 Per Cent. Reparation Duty.

An agreement has been reached between the British and German Treasuries and the Agent-General of Payments, as a result of which a different method will be used in the future for the payment of the German Reparations levy of 26 per cent. on exports to this country.

It is understood that in the future the equivalent of the 26 per cent. tax on German exports to Great Britain shall be paid direct to the British Government by the German Government in a lump sum monthly, the amount to be calculated on the volume of actual trade done in the preceding month. This arrangement will come as a great relief to British traders. In the past, ever since the tax was first collected in 1920, it has been the practice for the British importer to pay the tax to the British Government and then to deduct the amount before paying the German account. Traders naturally disliked those complications, and since last December negotiations have since been going on with the result mentioned above.

SOUTH-WEST
London Master Printers' Association

Annual Meeting.

The annual meeting of this Association was held on Tuesday evening, April 7th, at Messrs. Arding and Hobbs' Restaurant, Clapham Junction, S.W.11. The president, Mr. R. B. Simnett, occupied the chair, and was supported by the vice-president, Mr. F. E. Tacey, and the Association officers. There were also present Mr. H. B. Naylor (L.S.C. Jobbing Guild) and Mr. W. Whyte, secretary of the L.M.P.A., and the presence of these gentlemen with a good number of members testified to the fact that this unit of the London Alliance is still very much alive and that active interest in its welfare is well maintained.

The first hour was spent in social intercourse and a general inspection of the attractive specimens of printing exhibited by various members in connection with the Inter-District Competition to be held at the Agricultural Hall in May.

The formal business was next taken, the chief part being the adoption of the treasurer's balance-sheet and the committee's report and the election of officers for the ensuing year.

In the unavoidable absence of Mr. R. Kent, the secretary presented the annual statement of accounts and was pleased to be able to report a balance in hand.

On the proposal of Mr. H. A. Chivers, seconded by Mr. A. Spring, the meeting unanimously accepted the balance-sheet, and the secretary was complimented on his "estimating" ability in budgeting for the year's financial requirements.

The next item on the agenda was the committee's report, which stated that whilst there is still much room for improvement, the state of trade in the industry is somewhat better than at this time last year. Mention was made, as an outstanding effort, of the collective advertising campaign, organised by the National Federation, and the report stated that, though at this stage it was impossible to gauge the usefulness of this scheme, it was greatly hoped and expected that much benefit and increased business might result from it for all concerned. Local efforts had been principally confined to consolidating their position and enlarging the Association's sphere of influence, and under the strong lead given by their president much good work had been accomplished. Reference was made to the year's successful monthly meetings and two joint assemblies with other district associations, and appreciation was expressed of the active interest in the welfare of the Association displayed by the president of the parent body, Mr. A. Langley. Messrs. A. Williamson, W. Whyte, R. B. Simnett and H. B. Naylor were also thanked for assistance rendered. Special reference was made to the work of the sub-committee appointed to deal with the question of church printing within the district, as a result of whose efforts an attractive folder and concise price list accompanying it were circulated to all the local clergy. In this connection it was stated that once again their friend and past president, Mr. J. D. Wise, had placed them under a great debt of gratitude.

On the motion of Mr. Rangecroft, seconded by Mr. Luckins, the report was unanimously approved.

Before proceeding to the election of officers, two new firms were admitted to membership: The Ashvale Press, 2, Ashvale-road, S.W.17; and A. V Huckle and Son, 60, Ramsden-road, Balham, S.W.12.

Mr. Simnett, before vacating the chair, gave a brief résumé of his year of office, and expressed the pleasure it had given him to serve the Association and also his thanks to all the officers and members who had so faithfully supported him, making special mention of the headquarters staff in this connection.

The chair was then temporarily taken by Mr. A. Spring, and the vice-president, Mr. F. E. Tacey, rose to nominate Mr. R. B. Simnett for a further term of office. This was seconded by Mr. McColl Weir, and Mr. E. G. Cole desired to be associated with the nomination. The meeting showed in no uncertain manner its hearty approval by according Mr. Simnett a rousing reception when Mr. Spring invited him to resume his place as chairman. Mr. Simnett responded to the invitation with much feeling.

Mr. A. Spring moved the re-election of Mr. F. E. Tacey as vice-president. This was seconded by Mr. H. A. Chivers, and as in the case of the re-election of the president there was no mistaking the popularity of this nomination.

A letter was read from Mr. R. Kent, who has been connected with the Association since its inception, asking to be relieved, for purely private reasons, from his office as treasurer. Much genuine regret was expressed at this, and the secretary was instructed to write to Mr. Kent a very cordial letter of appreciation for his long and willing service.

On the proposition of Mr. E. G. Cole, and seconded by Mr. Luckins, Mr. A. Spring was elected to succeed Mr. Kent as treasurer.

Mr. Luckins proposed and Mr. McColl Weir seconded that the Committee as a whole be re-appointed and that Mr. R. Kent be added to their number. This was heartily approved by a unanimous vote.

The joint honorary secretaries, Mr. Fred. H. Cole and Mr. Fred. A. Chivers, were, on the nomination of Mr. Spring, seconded by Mr. E. G. Cole, also unanimously re-elected.

The three representatives on the L.M.P.A. Council, viz.: Mr. R. B. Simnett, Mr. F. E. Tacey and Mr. E. G. Cole, were re-appointed for a further period.

This portion of the proceedings was brought to a close by the passing of votes of thanks to the headquarters staff for their willing assistance, and also to the representative of the *British and Colonial Printer and Stationer* for so often attending to record the proceedings of the Association.

Mr. W. Whyte briefly responded on behalf of the headquarters staff.

The president then asked Mr. H. B. Naylor to take charge of the proceedings and make his selection from the specimens exhibited to be forwarded to the headquarters Hanging Committee for final inclusion in the Inter-District Competition.

It was regretted that a more general response from the members had not been forthcoming but Mr. Naylor, with running comment of criticism and appreciation, entertained and instructed the members in his usual able manner.

At the conclusion of Mr. Naylor's remarks, Mr. Simnett expressed the thanks of the meeting to him for his presence and help, and the secretary, Mr. Fred. H. Cole, suggested that with Mr. Naylor's consent they should arrange for a meeting later on in the year which the employees should be invited to attend and have the benefit of listening to Mr. Naylor. Mr. Naylor, in replying, expressed the pleasure it would give him to attend such a function.

The president announced that the next meeting would be held on Tuesday, May 5th, 1925, when Mr. H. D. Keats, late machine instructor of the London School of Printing and St. Bride School, would address the members on "Ink and Ink Troubles."

This brought to a termination a very successful and enjoyable annual meeting and the chairman was thanked for his able conducting of the proceedings.

F. A. C.

Paper Prohibition.

Mr. Mellon, the U.S. Secretary of the Treasury, is sending a communication to Collectors of Customs throughout America prohibiting the importation of news-print paper and wrapping paper from two firms in Sweden because of their "failure to produce records in accordance with Section 510 of the Tariff Act of 1922."

According to the *Paper Trade Journal* N.Y.), the Secretary has prohibited the importation of news-print paper from Holmens Bruks and Fabricks A/B of Norrkoping, Sweden, and wrapping paper from Fiskeby Fabriek A. B. Norrkoping, Sweden.

In both instances, the Secretary states that satisfactory evidence has been presented that these firms "have failed to submit for inspection for the purpose of obtaining information therefrom, as required by Section 510 of the Tariff Act of 1922, certain of their records relative to the value and classification of merchandise manufactured by them and exported to the United States."

In his letter the Secretary says that in view of this refusal the collectors are "instructed to prohibit the importation and refuse delivery of all merchandise manufactured by or for the account of these two firms."

Trade Notes.

An amalgamation has been arranged between the *Bath Herald* and the *Bath and Wilts Daily Chronicle* under the title of the *Bath and Wilts Chronicle and Herald.*

A fire occurred on the 9th inst. at the premises of Messrs. Lloyds, printers and publishers, 51, John Bright street, Birmingham, where considerable damage was done to the contents of the workshop.

The proprietors of the *Yorkshire Evening Post* are making arrangements for the simultaneous printing of that paper at Leeds and Doncaster. Premises have been taken at the latter town, and new machinery is now being installed. The intention of the duplication is to cover the vast South Yorkshire coalfield district with news as late as in the corresponding issues published at the headquarters in Leeds.

New Rating Bill.—In the Commons on Thursday Mr. Neville Chamberlain (Minister of Health) presented the Rating and Valuation Bill (which was read a first time); to simplify the making and collecting of rates, by consolidation and otherwise; to promote uniformity in valuations of property for the purpose of rates and taxes; and to amend the law as to the valuation of machinery and certain other classes of property.

Mr. George Allan, whose death has taken place at Frizinghall, near Bradford, in his 88th year, had been for nearly fifty years associated with the *Yorkshire Observer*. He went to Bradford in 1867 to take up the managership of the jobbing office of the *Yorkshire Observer*, and later became general manager of the concern. In 1906 he was associated with Sir William Byles in patenting what was known as the "cold stereotyping process," which afterwards was generally adopted.

A well-known Durham printer, Ald. George Henderson Procter, twice Mayor of that city, passed away last week after a long illness, aged 75.

The death has occurred at Chorley, at the age of 70, of Mr. John Brewer, the oldest printer in the town, head of the firm of Messrs. J. Brewer and Son.

Mr. T. H. Ferguson, whose death has occurred at Lurgan, near Belfast, was formerly an apprentice in the printing office of the *Lurgan Mail*. Fifteen years ago he commenced business as a master printer, and built up a successful business. In October, 1923, on the retirement of Mr. Louis Richardson, the proprietor of the *Lurgan Mail*, Mr. Fergusan became an active partner in that paper.

Dr. Friedrich Baedeker died at Leipzig on Friday last at the age of 81. He was the younger son of the more famous Karl Baedeker, who in 1839 founded the well-known firm of guide-book publishers.

The late Mr. Harold Malcolm Duncan, Parkside, Wimbledon, and Philadelphia, U.S.A., managing director of the Lanston Monotype Corporation, Ltd., left (property in this country) £16,010.

The *Daily Telegraph* Sports Club held the first golf competition for a challenge cup presented by the proprietors at Fulwell on Thursday. There were over twenty competitors, and the winning score, 91 less 7=84, was returned by Mr. D. Salter.

The *Times* Mid-week Football Team beat Usher-Walker by one goal to none at Dulwich on Friday in the final round of the competition for the Natsopa Shield.

The Home Counties Master Printers' Alliance is to hold its annual general meeting at the Holborn Restaurant, London, W.C., on Monday, April 20th, 1925. All members of the Alliance are requested to be present. The president will take the chair at 11.15 a.m.; at 12.45 an adjournment will be made for the annual luncheon, and after luncheon the meeting will be resumed. Matters of importance will be under consideration, and it is hoped that there will be a large attendance from all parts of the area. Invitations to be present have been accepted by: The chairman of the Federation Labour Committee (Lt.-Col. H. Rivers Fletcher), the president of the London Alliance (Mr. Alfred Langley), the secretary of the Federation (Mr. A. E. Goodwin), the secretary of the Costing Committee (Mr. A. Williamson), and the secretary of the London Alliance (Mr. W. Whyte).

CAPACITY

THE profit earning value of a composing machine depends upon its capacity.

The Intertype operator can have twelve faces at his disposal without leaving his chair.

When it is necessary to change a magazine it can be removed and another one substituted in less than ten seconds.

These are some of the advantages which make the Intertype the most profitable machine of its class, and account for its outstanding success.

We can easily show you how the Intertype can increase YOUR profits.

Trade Union Matters.

T.A. Ballot Result.—The officials of the Typographical Association announce that the recent ballot on the proposed alteration of hours and wages of newspaper workers, as agreed to at a conference of the Labour Committee of the Master Printers' Federation and the Newspaper Society and the Executive Council of the Typographical Association, has been carried by a vote of 6,953 against 4,684. The agreement provides for one night off per fortnight for men on morning newspapers and one half-day per week or one day per fortnight for men on evening newspapers, but without any reduction of hours in each fortnight under the existing agreement. An increase in wageis also made as follows: 4s. per week for Grade 1, 3s. per week for Grade 2, and 2s. per week for Grades 3, 4, 5 and 6. Where a bonus has been agreed to locally in excess of the rates provided in the National Wages Agreement, the increases offered above will be merged in the weekly rate of wages and will carry the overtime rate. The acceptance of these proposals carries with it an undertaking that overtime shall not be withdrawn except after the customary fourteen days' notice.

Miehle Machine Rates.—The Executive Council of the Typographical Association have had under consideration a request by the Manchester branch for instructions on the rates to be charged for the working of vertical Miehle machines. The branch had claimed a rate of 4s. extra for an automatic feeder, in accordance with a former ruling of the Executive Council, but the firm in question had claimed that the machine came under the heading of a platen machine. No agreement had been come to, but the firm were prepared to make any decision arrived at retrospective in its application. The Executive Council directed a letter to be sent to the firm claiming 4s. extra in accordance with rule.

Who's Who
IN THE
PRINTING & ALLIED TRADES.

The New President of the Employers' Federation of Envelope Makers and Manufacturing Stationers.

In its new president, the Employers' Federation of Envelope Makers and Manufacturing Stationers have selected one who has had a wide experience of business and public work. Mr. T. Owen Jacobsen's name is well known in a variety of fields of useful activity.

Photo, J. Russell & Sons, London.

MR. T. OWEN JACOBSEN, J.P.

Dealing first with his business associations, he has, of course, built up a very fine business in conjunction with Mr. Stanley Welch. Before entering into this alliance, however, Mr. Jacobsen had learned the rudiments of trading "on the road." At the age of 20 he came to London to enter the house of Castell Brothers, another firm of wholesale stationers. Subsequently he joined the well-known firm of Edward Lloyd, Ltd., where he got a more thorough insight into the paper business. His association with Mr Welch commenced in 1893, when the business of Jacobsen, Welch and Co. was established. In 1898 the undertaking was formed into a limited company, when the late Alderman E. T. Fowler, J.P., ex-Mayor of Marylebone, became a director, together with Mr. Jacobsen and Mr. Welch. The former partners were the first managing directors, and have remained so up to the present.

Outside of his own particular company, Mr. Jacobsen has done an enormous amount of public work, being exceedingly unselfish both as to his time and labour. He was Member of Parliament for the Hyde Division of Cheshire in 1916-18, member of the L.C.C. for North Lambeth in 1919. He is, further, a Justice of the Peace for the County of London, a Fellow of the Royal Geographical Society, a member of the council of the Labour Co-Partnership Association, on which many well-known people serve, and on the board of the Early Closing Association.

THE Finnish firm of D. Winter and Co., O/Y., Tryckfärgsfabrik, Järnvägsgatan 3, Abo, Finland, has extended its business by buying up the Astroms printing ink factory.

NEW GAELIC DICTIONARY.—A new Pronouncing and Etymological Dictionary of the Gaelic Language (Gaelic - English, English-Gaelic) by Malcolm Maclennan, D.D., has just been published by John Grant, 31, George IV Bridge, Edinburgh.

Exhibition of British Printing.

Excellent Specimens on View at the London School of Printing.

The Exhibition of British Printing at the London School of Printing, Stamford-street, opened on Tuesday of last week by Lord Riddell, presented an effective rejoinder to the statements so frequently heard regarding the supposed decadence of British printing. The main purpose of the Exhibition is to show that a high standard of the printer's art and craft is attainable in Great Britain. Following upon the interesting exhibition of Continental printing held at the School last Christmas, when a comprehensive collection of printing gathered by Mr. J. R. Riddell, the Principal of the School, during his visit to printing centres on the Continent aroused much interest amongst printers, the present Exhibition serves a very useful purpose by demonstrating that British printers can turn out work equal to that produced on the Continent.

Among those present at the opening ceremony were: Lord Riddell, Mr. C. W. Bowerman, M.P.; Mr. W. B. Wykes (president of the Federation of Master Printers), Mr. Alfred Langley (president of the London Master Printers' Association), Mr. John Fry, Mr. J. J. Keliher, Mr. Edward Unwin, Mr. Rupert Kneale, Mr. Wilson Howes, Mr. F. Colebrook, Mr. Wiborg and Mr. Chas. I. Ferguson (Ault and Wiborg), Mr. W. J. Pincombe, J.P. (Education Committee of the London County Council), and Mr. J. R. Riddell.

The exhibition covered a wide variety of different methods of production including colour collotype, photogravure, offset and letterpress processes. Although the exhibits are of a commercial character they are of high artistic merit and embrace all grades of printing: newspapers, periodicals, circulars, catalogues, books, colour printing, posters (including those issued by the Underground and L.M.S. Railways), and box making.

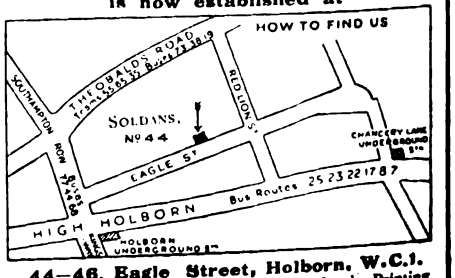
Among the firms contributing to the Exhibition are the following: The London Stereoscopic Co., Ltd., C. and G. Ponton, Hazell, Watson and Viney, Ltd., Newnes and Pearson Printing Co., Suttley and Silverlock, Ltd., The Amalgamated Press, Ltd., Edmund Evans, Ltd., Sanders, Phillips and Co., Ltd., Eyre and Spottiswoode, Ltd., The Curwen Press, Plaistow, Geo. W. Jones, Clarke and Sherwell, Ltd., Blades, East and Blades, Ltd., Waterlow and Sons, Ltd., Bemrose and Sons, Ltd., Rembrandt Intaglio Printing Co., Ltd., Langley and Sons, Ltd., Boots Cash Chemists, Thos. Forman and Sons, Ltd., Hudson and Kearns, Underground Electric Railways, London Midland and Scottish Railway Co., University Press, Glasgow, the *Paper Container*, the *Sketch*, the *Sphere*, *Punch*, *Daily Sketch*, *Illustrated London News*, *Nottingham Guardian*, *Connoisseur*, *Sporting and Dramatic News*, *The Times*, *Daily Telegraph*, *Daily Mirror*, *Evening Standard*, the *Studio*, *Manchester Guardian*, Spottiswoode, Ballantyne and Co., Ltd.

Lord Riddell on British Printing and the Work of the School.

Lord Riddell, in declaring the Exhibition open, observed that as president of the executive of the London Printing School he felt it an honour to be called upon to inaugurate such a remarkable display, indicating as it did the progress of British printing in every department, including the commercial and the artistic. It was customary to talk highly of the work done by printers in the old days, but he doubted whether those old printers produced work like the work before them that afternoon. His Lordship went on to say that the School was performing a very important function, for it was training printers not only for this country but for the British Empire. Young men from different parts of the Empire were going to carry the flag of British printing back to countries from whence they came. The School now had 2,300 students, and he wished to take that opportunity of thanking the Education Department for the cordial interest it had taken in their efforts. That department, the employers and the men, all combined with the object of improving British printing. It was pleasant to observe, also, that the trade unions displayed great interest, and it was in the interests of the men, the masters, and the unions that training should be provided for printers. In the old days that was offered by the apprenticeship system. That, however, had fallen into desuetude, and had been replaced by such instruction as was given by the school. In this connection their thanks were due to the Principal, Mr. J. R. Riddell, and the staff. The institution had been started by joint contributions—a part of the expenditure was borne by the London County Council and there were contributions from the masters and from the trade unions. It was a remarkable achievement, and he thought it was the true way to industrial peace. At the end of last year they had in that room an exhibition of Continental printing at which there were some fine examples of work. However, he could not help but think that the specimens there that afternoon were quite equal to, if not better than, those at the former exhibition. It was a gross slander to say of British manufacturers and workmen that they had lost their skill. At the present time the printing trade was producing better work than it had ever done before.

Mr. C. W. Bowerman, in proposing a vote of thanks to Lord Riddell, paid a tribute to his lordship for the part he had played in the formation of the School.

Mr. W. J. Pincombe, in seconding, spoke of the interest the London County Council took in the progress of the School and in technical education generally.



Mr. W. B. Wykes, who spoke as president of the Master Printers' Federation, said they regarded technical education—whether in London or the provinces—as of great importance. As a craft they had their own little differences, but fortunately they had managed to settle them without the interference of outside bodies, as had so recently and happily been done.

Fines for Lottery Printing.

At Bow-street Police Court, on Wednesday of last week, before Sir Chartres Biron, Ernest Denney, Drury-lane, was summoned for selling chances in a lottery, and Ernest George Poynter, printer, of Enfield; Joseph Deane, Drury lane; and Augustus Lock, Enfield, were summoned for aiding and abetting him. They pleaded guilty. Mr. Melville, for the Commissioner of Police, said that Denny was seen by a police officer to be selling in the street coupons of what were called "Football Doubles." He said that he was selling them on commission for Deane. Poynter was the printer of the coupons, and when seen by the police he said he had been told that the scheme was legal. Lock was fined £10, Poynter, £5, and Deane and Denny 40s. each.

At the Justice Room, Guildhall, on Thursday, Maurice Millem, of Golders Green, and Frank Ranson, of Bowes Park, printers and publishers, carrying on business as Ray Smith at Farringdon-street, were summoned (1) for printing and publishing tickets for "football doubles" upon which the name and address of such printers did not appear; and (2) for publishing a proposal or scheme for the sale of chances in a lottery not authorised by Act of Parliament, viz, "football doubles." Mr. F. J. de Verteuil, who appeared for the defendants, said they would plead guilty. Mr. Percival Clarke, prosecuting on behalf of the City Solicitor, said there was no suggestion of dishonesty, but he thought the omission of the printers' name and address was intentional, with the object of making prosecutions difficult. Mr. de Verteuil said the defendants were not the persons who carried on the lotteries. They had had warning, but it came too late for them to stop the circulars being issued. Mr. Alderman Batho fined the defendants £10 each (£5 for each offence), and also ordered them to pay £16 costs.

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

The April meeting of this Association was held on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C., when Mr. J. Fleming (president) presided over a fairly good attendance of the members. An interesting item on the agenda was an address entitled "The Romance of Journalism" by Mr. J. Esler (the Association's hon. technical representative).

The minutes of the March meeting having been dealt with, correspondence was submitted from, amongst others, Messrs. A. J. Daines, A. J. Flint and G. Knight.

The letter from Mr. Knight gave an account of the excellent work being carried on by the Bookbinders' Cottage Homes, to which institution the Association granted its annual contribution of three guineas.

The visit to the Printing Exhibition on May 16th and the annual outing (to Croxley Mills) on a date yet to be fixed were next considered. With regard to these events the president emphasised the importance of those intending to be present letting the secretary know as quickly as possible.

Mr. W. Elliot (overseer, bookbinding department, Messrs. C. and E. Layton) was next elected to honorary membership.

The Association's Printers' Pension votes—to the number of 21—were next allotted to various candidates. In addition to those held by the Association Mr. Fleming provided ten votes.

Mr. W. F. Cribb, in reporting on the annual dinner account, thanked the members for the support they had given to that function.

On the proposition of Mr. G. J. Hellery, seconded by Mr. J. E. Esler, a cordial vote of thanks was passed to the annual dinner stewards.

The annual dinner for next year was arranged to take place on April 17th at the Holborn Restaurant.

The Lecture.

Mr. Esler, on being called upon for his lecture, commenced by saying that the exploits of many journalists both of the old school and the new were of a more startling character than the average book of fiction. Referring first to Charles Lamb, Mr. Esler said he thought the essays of this writer delightful reading, not the least interesting of which being the one in which the author described the misery entailed in being called upon to be funny day after day. Mr. Esler proceeded to say a good journalist reflected his master. Men in the U.S. like the late Gordon Bennett and men in England like the late Lord Northcliffe, Pearson, Hulton and Lord Riddell were responsible for turning out men just as remarkable as themselves. In passing, the speaker thought the "nose for news" was a big asset to the newspaper man, but he was of the belief that the factor of luck played an equally prominent part. After giving a very interesting account of the exploits in America of Julius Chambers and that journalist's espousal of the cause of Thomas Gately, Mr. Esler went on to deal with the early days of the career of Sir Phillip Gibbs, mentioning particularly that well-known journalist's exposure through the columns of the *Daily Chronicle* of the notorious Dr. Cook. A reference to a few of the incidents in the careers of Mr. W. H. Nevinson and Mr. Bernard Shaw, including some of the latter's characteristic utterances, concluded a very fascinating lecture.

A vote of thanks, proposed by the chairman in complimentary terms, was passed to Mr. Esler for his address.

Blinded Soldiers as Telephone Operators.—It may not be generally known that one of the most successful occupations taught to the blinded soldiers at St. Dunstan's is telephone operating. A large number of these men have found employment with important business firms and organisations in London and the provinces, and not a few employers state that their board has never been so well and efficiently managed as by their blinded soldier operator. St. Dunstan's has several fully trained men ready for work, and the authorities at St. Dunstan's Headquarters, Inner Circle, Regent's Park, London, N.W.1, will gladly supply full particulars.

A Mauritius 1948 2d. blue stamp was sold at Glendining's for £26.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

South Africa and British Goods.

THE Budget speech of the South African Minister of Finance (Mr. Havenga) gives poor consolation to British manufacturers whose goods have found favour in the Union. He pointed out that his Government proposes to place the existing British preferential tariff rates given unconditionally in favour of produce or manufactures of the United Kingdom and reciprocally to other parts of the Empire as far as possible on a *quid pro quo* basis. He further added that the rebate would be withdrawn entirely on articles in which Great Britain predominantly holds the market, or where a proprietary name or trade mark is the determining factor in the sale of the article. Paper and printing exporters in this country will be particularly interested in the announcement that printed matter is included among the articles on which duties are to be increased. This is, no doubt, an answer to the very strong agitation which has been proceeding in the Union in favour of protection for the local printing industry, which, it is claimed, has been suffering very severely from overseas competition. The object of the proposals is to protect South African industries and to admit raw materials. So it is possible that while printed matter is handicapped the paper which the printer uses may retain some advantage. On the general principle, of course, it is much to be regretted that the special advantages which British manufacturers and exporters enjoyed in South Africa are to be minimised. A disturbing feature is that the policy of Imperial preference appears to be steadily losing ground through want of proper nourishment. The Federation of British Industries is evidently fully alive to the serious consequences which will fall upon British industry, and they have already made strong representations to the South African authorities. The Federation have earnestly pressed that no drastic change in the policy of the South African Government should be made, since they fear the results that such a change would inevitably have upon the whole question of trade and financial relations between Great Britain and the Union. The restoration of penny postage in South Africa is another indication that the Colonies intend to look after themselves.

Publicity and Paper.

WHAT is the status of the advertising specialist in relation to the buying of paper supplies? In view of the rapid development in direct advertising and the increasing volume of printing that is being handled by advertising agents, it is becoming necessary to have a clear ruling on the subject. Clearly the selection of a great amount of paper is in the control of the specialists and is decided by them. Sometimes they supply the paper and sometimes they instruct the printer what to use and where to buy it from. Papermakers and merchants court favour with these houses and must naturally continue to see that their product is not overlooked. But actual direct supplying is another matter, for the printer can rightly argue that he is losing a main part of his trade and a large portion of his profit. In fact, this argument has been put forward in the negotiations between the representative organisations of printers and paper merchants. Back in February, 1923, it was agreed that advertising agents should be excluded from the definition of "the trade." Despite the tacit official understanding, it cannot be claimed that there is any clear understanding on the subject, any more than there is on the general problem of direct trading. Committees have met, resolutions have been framed and printers have been circularised repeatedly for some years past, but no definite arrangement has been made. Granted there are considerable difficulties in the way of arriving at a set policy of trading, it still remains that there will have to be a policy, and the sooner the better for all concerned. Much more difficult trade problems have been solved in much less time; but in these cases it has been mainly, of course, the result of disinterested effort.

Paper Imports.

THE extent to which the British user relies upon foreign products is shown in the official returns. Sweden occupies her customary place as the largest supplier of packings and wrappings during Feb., with 150,464 cwts., a figure which marks an increase of 47,235 cwts. over February last year. The important place recently secured by Germany in this section of imports was again assumed by that country in February, although there is to be noticed a decline of 4,467 cwts. from those of twelve months ago. Packings and wrappings from both Norway (77,577 cwts.) and Finland (27,615 cwts.) show an increase, the former country by as much as 24,902 cwts. and the latter by 1,765 cwts. In printings the contributions of Norway (63,510 cwts.) and Sweden (62,376 cwts.) were on a larger scale, both countries increasing their supplies by about the same margin, namely, 17,000 and 15,000 cwts. respectively. Printings from Finland (53,903 cwts.) were very much lower than usual, and show a falling-off of 50,410 cwts.

Colonial Markets.

CONSIGNMENTS of printings to Australia during February reached the abnormally high figure of 228,491 cwts., which indicates an increase of 123,220 cwts. over the shipments of twelve months ago, and an advance of 150,861 cwts. over the monthly average for the year. British India (15,286 cwts.) and New Zealand (15,005 cwts.) both took smaller quantities of British printing paper, whilst British South Africa (10,838 cwts.) and Ceylon (5,141 cwts.) increased their custom. The United States bought more liberally of British printings during the month, whilst purchases on the part of France were smaller.

Development of Photogravure.

Sir,—I have read with much interest the article entitled "Photogravure from the Printer's Standpoint," by Mr. R. B. Fishenden, being the report of his paper given before the Central London Master Printers at Stationers' Hall recently. I note Mr. Fishenden refers to myself in connection with photogravure. His article is a very excellent one, and covers the ground very thoroughly, and I, like many others, appreciate it very much; but I think there are a few points which might have a little further explanation or perhaps enlargement, and beg briefly to state as follows:—

The first printers of machine gravure in any country were the Rembrandt Intaglio Printing Co. They started in 1896, and no one else did anything worth talking about so far as I can understand until six years after, when a concern in Philadelphia, U.S.A., did begin to produce work from a cylinder—a certain amount of rotary photogravure work. It was after this that a Mr. Saalburg started a company in New York, and it is interesting to note that they produced a few interesting samples of photogravure in colour in 1909.

I had done some experimental work myself several years earlier, but it was not until 1908 that I produced a photogravure machine and process satisfactory to myself, then at any rate. As Mr. Fishenden mentions the *Illustrated London News* and the personalities connected therewith, it might be interesting to know that I approached that journal in 1909, had interviews with the then Mr. Charles Ingram, Mr. Bruce Ingram and the late Mr. Lascelles. (Mr. Rudd came on the scene a little later.) I did my best to enthuse them in photogravure, and very well remember the last day I went there, when they practically turned me and my process down, the governing reason being that certain German patents had been taken out which were claimed to be master patents for the reproduction of intaglio letterpress and pictures together. Consequently my association with the *Illustrated London News* fell to the ground, and I could not persuade them then that the patents were absurd. This everyone knows now, for these patents, after a fight at the Law Courts, were thrown out of the British Patent Office.

I made a public demonstration of my own photogravure machine in 1909 and 1910 at Thanet House, Strand, where various members of the trade were invited to see the machine in operation, and which was fully referred to by Mr. Snowden Ward, and described in various papers, particularly in the June, 1910, issue of the *Process Engravers' Monthly*.

I sold a right to use my process to Mr. Edward Hunter, of the Sun Engraving Co., who formed the Mezzogravure Co., which company sold its plant and process to Messrs. Waterlows, the printers of the present Treasury Notes.

I was in the United States from 1910 to 1912, and when I returned I found a great deal of interest had been evoked in intaglio and photogravure. My process, in the hands of competent American and other printers, has been developed to a very great extent in connection with the production of fast newspaper printing, and now something over 30 papers are printed each week by the process in the various cities of America.

Mr. Fishenden has said I have had a good deal to do with periodical printing, and it is very kind of him to say this, but really I have been more interested in fine work; for when I took my process to America I had developed it to a point which could not be beaten for fine quality—so I think, at any rate. My friends in America, however, have gone in for bulk. I say this in no spirit of disparagement, for they have to produce long runs very quickly, and have not had the necessary time to put in on the negatives and positives and the preparatory work which is necessary to produce the finest quality.

Colour photogravure is no new thing—I mean the dream of colour photogravure is no new thing. As long ago as 1912 I note a reference is made to the fact that "newspapers will shortly be printed in colour photogravure." We have not got to that yet, but the first colour photogravure in England was done by the Rembrandt Intaglio Printing Co. as far back as 1908. At that time I was art editor to the Fine Art Publishing Co., then in Charing-cross-road, and I believe these very excellent subjects in colour photogravure then produced are still selling. Certain it is that the quality produced by the Rembrandt Intaglio Printing Co. in these very beautiful illustrations has never been exceeded. A German printing house, however, produced a type of colour photogravure as far back as 1909, 14 years ago.

Yours faithfully,
Frederic T. Corkett.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Egypt.

The office of the Commercial Secretary at Cairo reports that the Survey of Egypt, Ministry of Finance, desire to receive tenders for the supply of 100 reams of machine-made ledger paper size 30½ in. by 40½ in. and 400 reams of similar paper, size 22½ in. by 36½ in. Tenders on the proper form are to be presented in Egypt by noon on June 16th, 1925.

Argentine.

The Commercial Secretary at Buenos Aires (Mr. H. O. Chalkley, C.B.E.) reports that the Argentine Mint are inviting tenders to be presented by July 2nd, 1925, for the supply of paper for printing postage stamps, fiscal and inland revenue values, etc.

United Kingdom firms desirous of obtaining further information should apply to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1.

New Zealand.

His Majesty's Trade Commissioner in New Zealand (Mr. N. Elmslie) reports that the New Zealand Post and Telegraph Department is inviting tenders for the supply and delivery of envelopes. Tenders must reach the Stores Manager, Post and Telegraph Department, Wellington, New Zealand, by 4 p.m. on May 18th.

Paper Standardisation.

Printers Report Progress.

Efforts continue to be made towards reaching an agreement in the different sections of the trade on some scheme of standardised methods of dealing in paper, says the Master Printers' *Circular*. Several consultations have been held with the National Association of Wholesale Stationers and the Papermakers' Association, and it is hoped shortly to arrange a conference with the Papermakers' Association in order to agree finally the sizes and conditions.

It may seem to the enthusiasts who are anxious to obtain the benefits of the thousand sheets or mille for buying and selling paper and the other advantages of standardisation, that the negotiations are taking a long time, but it is most desirable, when a change of this character is contemplated, to obtain the approval and co-operation of all the trade interests concerned.

The list of members of the Federation of Master Printers who have already signed a statement that they are strongly in favour of the proposed standardisation and are prepared to place their orders with firms who standardise is growing to very large proportions. These signatures represent offices in all parts of the country and include large as well as small firms. The subject will be further discussed at the annual meeting of the Federation at Buxton.

Another step in the direction of Standardisation of Paper has been made by the recent action of H.M. Stationery Office. The Controller has been considering the question for some time, and as a result of his investigations has come to the conclusion that considerable advantage will be derived by standard sizes, packages, qualities, etc., in the vast quantity of paper that is used by the Stationery Office. The Controller has decided to abandon the 480 sheets or any other number of sheets to the ream, and recently issued a large schedule for tenders of paper with the new methods of standardisation. These include a 500-sheet ream, which gives a basis for 1,000 sheets for calculations. The sizes are standardised, and, owing to the grouping of colours and weights under standard conditions, he has been able to reduce the immense varieties of paper used by the Stationery Office to reasonable proportions. The fact that the Controller of the Stationery Office, on independent investigation, has decided on the thousand basis will be of very considerable help to the general printing trade in obtaining the standardisation for which they have been agitating.

The late Mr. William Yeats McDonald, J.P., D.L., Aberdeen, a director of Messrs. Alexander Pirie and Sons, Ltd., left £66,682.

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE.—Accounts for the year ended March 31st, 1925, show a balance amounting to £34,728, and the board recommended the payment of a balance dividend of 3½ per cent, which will make 6 per cent. for the year, against 5½ per cent. in the previous year, leaving a sum of £3,074 to be carried forward. On its holding in the Mergenthaler Linotype Co of New York, the company received a distribution of 11¼ per cent., which compared with 10 per cent. in the preceding year.

CHAPMAN AND HALL.—Net profit for 1924 £1,500, plus £443 forward. Dividend 4 per cent. on cumulative preference shares, £343 carried forward. Full preference dividend is 7 per cent. Last distribution on ordinary shares 2½ per cent. for 1920.

NEW COMPANIES.

"CHRISTIAN WORLD," LTD.—Capital, £6,500, in £1 shares (5,000 10 per cent, non-cumulative preference and 1,500 ordinary); to acquire the *Christian World* newspaper and the *Christian World Pulpit*, the property of the executors of the late Herbert Clarke, and to carry on the business of newspaper proprietors, printers, engravers, etc. Private company. Directors: B. P. J. Clarke, A Porritt and F. Lewis. Registered office: 13-14, Fleet-street, E.C.4.

CURTIS BROS, LTD.—Capital £5,000, in £1 shares; to acquire the plant, stock and other chattel assets of the business of a printer carried on by R. C. Curtis at Watford. Private company. First directors: R. C. Curtis, F. W. Curtis and G. A. R. Chatfield. Registered office: 8, King-street, Watford.

R. AND W. WATSON, LTD.—Capital £90,000, in £1 shares; paper and pulp manufacturers, merchants, printers, publishers, proprietors of journals, magazines, etc. Private company. Directors: Wm. Watson, R. Watson, junr., R. Watson and J. H. Watson. Registered office: Linwood, Renfrewshire.

REGENT ENGRAVING CO., LTD.—Capital £250, in 10s. shares; process engravers, general printers, block manufacturers, lithographers, stationers, bookbinders, etc. Private company. Directors: C. E. Watts and Evelyn S. Dowling. Registered office: 4-8, Haunch of Venison-yard, Brook-street, W.1.

MIDLAND AND WELSH ADVERTISING CO., LTD.—Capital £5,000, in £1 shares (3,500 7½ per cent. non-cumulatve preference and 1,500 ordinary); to acquire the billposting businesses carried on by the Herefordshire Press and Printing Co., Ltd., and Jakeman and Co. (Printers), Ltd., at Hereford, and any or all interests attaching to the copyright and goodwill of the *Hereford Journal* and *Mercury* and to adopt an agreement with Captain M. B. Pugh. Private company. Directors: Major R. Jackson, B.A., Captain M. B. Pugh and G. W. Russell. Registered office: Midland Bank-chambers, Hereford.

STAPLE PRESS, LTD.—Capital £2,500, in 2,300 10 per cent. participating preference shares of £1 each and 4,000 ordinary shares of 1s. each; to acquire the business of a publisher of the paper called *Office Equipment* and of an advertising agent now carried on by W. H. Warman as "J. Gilbert Smith," at Bank-chambers, 329, High Holborn, W.C. Private company. First directors: W. H. Warman and W. H. Greene. Registered office: Bank-chambers, 329, High Holborn, W.C.1.

UTILITY JOURNALS, LTD.—Capital £4,000, in £1 shares (2,000 8 per cent. non-cumulative preference and 2,000 ordinary); to acquire the business of the *Smallholders' Gazette* and other publications, and to carry on the business of proprietors and publishers of newspapers, journals and other literary works and undertakings, etc. Private company. Directors: F. H. Marshall, H. Marshall and J. R. Hex.

ALLIED PUBLICATIONS MUTUAL ASSURANCE.—The Allied Publications Mutual Assurance Association, Ltd., a company limited by guarantee, not having a capital divided into shares, to indemnify on the mutual principle the members of the Association, being employers of labour, against employer's liability risks, etc. Subscribers: H. Langley Jones, C. Edenborough, W. T. Slatcher, A. B. Ervine, W. N. Flower, K. Nicolson, W. H. Eyre, W. Will and W. L. Newcombe. Registered office: 2, Arundel-street, W.C.2.

A. AND E. JEFFREY, LTD.—Capital £2,000 in £1 shares; to acquire the business of a map maker, general printer and stationer carried on by A. Jeffrey at 3A, Market-place Chambers, Derby, as "Cartographia." Private company. Directors: A. Jeffrey and H. Jenner. Registered office: 3A, Market-place Chambers, Derby.

HENDERSON AND BIRKETT, LTD.—Capital £2,000 in £1 shares; to acquire the business carried on by W. Howe and F. Molteni as "Henderson and Birkett" at 4 and 5, Hills-street, Gateshead, and to carry on the business of stationers, printers, publishers, etc. Private company. First directors: W. Howe and F. Molteni. Registered office: 4 and 5, Hills-street, Gateshead.

THOMAS LEACH, LTD.—Capital £1,500 in £1 shares; to acquire the undertaking, stock in trade and assets (excluding any leasehold or freehold premises, goodwill, plant, machinery, equipment and tools) of the business of general stationery and printing carried on at 24, Bath-street, Abingdon, as "Thomas Leach." Private company. Directors: T. Leach, F. H. Leach, and V. J. Leach. Registered office: 2, Bath-street, Abingdon.

BARCLAYS ADVERTISING LTD.—Capital £100 in £1 shares; advertising agents, consultants and contractors, distributing agents, news-agents, proprietors and publishers of books, journals, magazines, newspapers and other literary work, etc. Private company. Directors: J. Scott-Taggart, F.Inst.P., A.M.I.E.E., and Dorothy Scott-Taggart. Registered office: Bush House, Kingsway, W.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

LABOUR PUBLISHING CO., LTD. (London).—Satisfaction to the extent of £3,525 on October 20th, to the extent of £100 on November 17th, and to the extent of £250 of December 20th, 1924, of debentures dated January 7th, 1921, securing £20,000.

SAMUEL JONES AND CO., LTD. (gummed papermakers, etc. Office, London).—Four mortgages, all dated March 20th, 1925, to secure £550 each, charged on 39, 41, 43 and 51, Sandringham-road, Watford. Holders: The Borough of Watford.

JAMES BRUCE AND CO., LTD. (waste paper and rag merchants, etc., London).—Debenture dated March 18th, 1925. to secure £300, charged on the company's undertaking and property, present and future, including uncalled capital, if any. Holders: C. Davidson and Sons, Ltd., Mugie Moss Works, Bucksburn, Aberdeenshire.

SUTCLIFFE AND CO. (PRINTERS), LTD. (Brighouse).—Debenture dated March 17th, 1925, to secure £350, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: J. T. Armitage, Seed Hill, Huddersfield.

NORTON AND GREGORY, LTD. (drawing office material manufacturers, etc., London).—Satisfaction in full on March 6th, 1925 (a), of mortgage dated April 16th, 1915, and (b) of mortgage or charge dated April 27th, 1922, securing all moneys due or to become due respectively.

"AEROPLANE" AND GENERAL PUBLISHING CO., LTD. (London).—Satisfaction in full on March 17th, 1925, of debentures dated June 14th, 1913, securing £1,000.

EDE AND TOWNSEND, LTD. (printers, etc., London).—Satisfaction in full on September 24th, 1923, of debentures dated March 5th, 1904, securing £400. (Notice filed March 24th, 1925.)

"DAILY NEWS," LTD.—Particulars filed of £100,000 second debentures authorised March 12th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £50,500.

ALLISON AND BOWEN, LTD. (newspaper proprietors, etc., Stafford).—Mortgage dated March 26th, 1925, to secure £3,500 charged on 19, Greengate-street, Stafford. Holder: C. S. Allison, 96, Wolverhampton-road, Stafford.

J. M. OUSELEY AND SON, LTD. (publishers, etc., London).—Debenture dated March 25th, 1925, to secure £250, charged on the company's undertaking and property, present and future, including uncalled capital, subject to £850 debentures. Holder: E. T. Hodgson, 7, Great Queen-street, W.C.2.

HENDON PAPER WORKS CO, LTD.—Deed of further charge dated March 19th, 1925, and collateral deed of even date (supplemental to debenture date April 20th, 1913), to secure all moneys due or to become due from the company to the Bank of Liverpool and Martins, Ltd., not exceeding £130,000 inclusive of £100,000 secured by mortgage dated April 20th, 1923. Property charged: Hereditaments at and near Sunderland, and the company's undertaking and property, present and future, including uncalled capital.

RECEIVER APPOINTED OR RELEASED

S. AND P. MUSIC ROLL CO., LTD.—E. Portlock, of 186, Bishopsgate, E.C.2, was appointed receiver and manager on March 24th, 1925. under powers contained in deed of security dated April 2nd, 1924.

ATTRACTIVE PUBLICITY, LTD.—T. J. McManis, of 2, Foster-lane, Cheapside, E.C.2, was appointed on March 24th, 1925, under powers contained in debentures dated August 26th, 1924.

Hugh Stevenson and Sons, Ltd.

After a number of adjournments, Mr. Justice Romer, in the Companies Winding-up Court last week, dismissed the petition of the Attorney-General for the compulsory liquidation of Hugh Stevenson and Sons, Ltd.

Mr. Spens, K.C., who appeared for the Crown, made the application for dismissal, saying that an agreement had been come to with the new company which was satisfactory to the Income Tax Commissioners.

Mr. Sims, for the respondent company, said an arrangement had been made.

Printers' Managers & Overseers (PARENT) ASSOCIATION.

United States and Canada Visited.

"Impressions of a Visit to the United States and Canada—In and Out of Print" was the subject of an entertaining address by Mr. A. J. England (superintendent of the machine department of the Cornwall Press), which formed the principal feature of the April meeting of this association held at the "Old Bell," Holborn, on Tuesday of last week. The president, Mr. R. H. Berry, was in the chair and there was a very fair attendance of members.

A warm welcome was given to a provincial visitor and to a member transferred to London, namely, Mr. W. H. Crowther, a trustee of the Yorkshire Centre, and Mr. S. H. Walton, late of the Birmingham and District Centre.

The preliminary business included the election of two candidates for membership, viz., Mr. F. S. Ferris (Amalgamated Press, Ltd., Sumner-street, S.E., overseer lithographic dept.); Mr. C. O. Hollingsworth (Messrs. Fell and Briant, Croydon, overseer lithographic dept.). These were both present and were personally welcomed by the president and the meeting.

The next business being the election of an auditor, there were three nominations: Messrs. C. W. Brown, F. W. Hume and R. Simpson. Mr. Simpson was elected by a large majority.

The general secretary gave the meeting particulars of the arrangements so far made in connection with the Association's United Gathering to be held at the Printing Exhibition next month. He said the Association had arranged to have a stand at the Exhibition which would serve as a rendezvous, and there would always be members in attendance to meet inquirers or visitors. The Association would pay an official visit to the Exhibition during the morning of Saturday, May 23rd, and the social events for the day would include luncheon in the Barford Saloon of the Agricultural Hall and high tea and bohemian concert in the Berners Hall, whilst on the Sunday there would be a motor drive through the Epping Forest district, with luncheon at the King's Oak Hotel, High Beech. Mr. Whittle added an intimation that the arrangements made for members' comfort would be a great improvement upon those of the 1911 Exhibition.

The president afterwards assured the meeting that both accommodation and catering would be very satisfactory, and those present expressed *nem. con.* their approval of the arrangements made.

Mr. England's Story.

After a few other matters of business had been dealt with, Mr. England was called upon for his address, which proved to be something quite off the lines of the customary set lecture. In homely colloquial fashion—as it recounting his experiences to a mere handful of friends—Mr. England told his story in such a manner as to hold his hearers interested and amused from start to finish. He told of a 12,000 miles tour made last year to the United States and Canada, the directors of the Cornwall Press having decided to send certain of their executive across the Atlantic to investigate improvements in printing methods and machinery. Those making the tour were Messrs. J. Griffiths (works manager), T. C. Bell (composing-room), H. Howe (stereo dept.), D. Wilson (binding department), and Mr. England.

Mr. England's narrative, full of amusing and interesting details, told briefly of the voyage across and the first impressions of New York, and then proceeded to Philadelphia, the home of the famous Curtis Publishing Co. To inspect this establishment was one of the principal objects of the tour, and in devoting a day and a-half to this firm the visitors were not disappointed with the large number of instructive and interesting points noted in regard to organisation, plant and methods. A matter that was very noticeable in the composing department was the extraordinary thoroughness of the work, time being taken to square up the formes to a high degree of accuracy, everything being made just right to within about $\frac{5}{1000}$ths of an inch. This accuracy, whilst it meant that the American compositor turned out only about 60 pages where his English colleague would have to produce 200, meant an immense gain in the ease and speed of production in the wonderful Curtis machine-room, with its 170 or so rotaries of various kinds. Machine minders' earnings, by the way, were found to be between $80 and $100 a week, and it was a common thing to see even the assistants rolling up in their motor cars.

At Buffalo, the Niagara Lithographic Co. was inspected, and opportunity taken to see the Falls, which were in partly frozen condition, and greatly impressed the tourists. Toronto, Canada, was the next place of call, where the Canadian-American Machinery Co. was the first establishment visited, of which company Mr. Weaver (late of Messrs. Hazell, Watson and Viney) was the means of enabling the visitors to inspect all the printing plants of note in Toronto.

At Detroit, Michigan, the *Detroit News* establishment was found very impressive, both in respect of its wonderful equipment and its luxurious and spick-and-span appearance. Special facilities were here obtained to visit the Ford motor works, which struck the visitors as perhaps the most wonderful thing seen in America.

Some extremely fine plants were visited in Chicago, including Donnelly's, the Hall Co. and the Goss Co., the last named being found engaged on the largest photogravure machine in the world, a machine to the order of the *Chicago Tribune*, taking twenty-one copper cylinders, for four-colour periodical printing. Mr. England was able to show some remarkable specimens of colour printing brought from Chicago, these having been produced at surprisingly high speeds.

After Chicago, New York printing did not seem to call for much comment, but some very fine printeries were visited, including the *New York Times*, the *Pictorial Review*, the *New York American*, the Linotype Co., Messrs. Hoe's and several others.

Typical of the breezy style of the lecture throughout was the entertaining account, with which it ended, of the ascent (by courtesy of the vice-president of the Miehle Co., of New York) of the Woolworth Building, which is something like 1,000 ft. high.

On resuming his seat Mr. England received a very hearty ovation.

After the president had commented upon the close attention with which the address had been followed, and had expressed his personal appreciation, a short time was spent in questions and discussion. In answer to one question Mr. England said he thought the skill of the English machine minder was on the whole far greater than that of the American, for the reason that the former had so many more difficulties to contend with. In regard to interleaving, this was not done at all in the colour work he had seen; in this connection he mentioned a process of wax spraying just introduced by the Curtis Co. to eliminate slip-sheeting in colour work.

A cordial vote of thanks to Mr. England was proposed by Mr. A. E. Jarvis, who referred to his own American experiences, and was seconded by Mr. F. E. Baker, another member who was able to speak of the United States from personal knowledge. It was carried with enthusiasm and Mr England briefly responded.

In closing the meeting, the president alluded to the illness of Mr. Arthur W. Paul—to whom, he said, they were indebted for suggesting that Mr. England should address them that evening. He was able to give good news of Mr. Paul's progress towards recovery.

Recently elected members of the Federation of British Industries include: W. G. Briggs and Co., Ltd.—process printing block makers, artists, photographers, electrotypers and art printers—Tudor House, Chichesterrents, Chancery-lane, W.C.2; H. W. Hart and Co., Ltd.—manufacturers of fine colours for the paint, linoleum, wall-paper, printing ink and allied trades—Crown Works, Darwen; Moore's Modern Methods, Ltd.—loose leaf ledger manufacturers—12, St. Bride-street, London, E.C.4; (works) New-court, Farringdon street, London, E C.

Bankruptcies.

Re ALFRED TAMMAGE, bookbinder, 232, Queen's-road, Dalston, late of 332, Goswell-road, and 2, Mitchell-street, Central-street, St. Luke's, E.C.—An application was made on April 7th, to Mr. Registrar Mellor at the London Bankruptcy Court, for an order of discharge on behalf of this bankrupt, who failed in 1908. The official receiver reported that the liabilities amounted to £752, and the estate had realised £20 15s. The applicant commenced business in 1887, and had traded both alone and in partnership. He paid a composition of 7s. 6d. in the £ on debts of £1,000 in May, 1901, and he attributed the 1908 failure to want of capital and heavy interest on borrowed money. The official receiver reported four statutory offences. His Honour upheld the official receiver's report, and taking into consideration the date of the failure, granted a discharge subject to judgment for £5, to be satisfied by an immediate cash payment.

C. W. BRADLEY AND CO, printers and publishers, 12. 13 and 14, Fetter-lane, E.C.—This firm, which consisted of Arthur Edward, Walter Sidney and Charles W. Bradley, failed in February, 1915, and on April 8th the bankrupt, Walter Sidney Bradley, applied at the London Bankruptcy Court for an order of discharge. Mr. Waterer, official receiver, reported that the firm's liabilities amounted to £5,451, but the proofs actually admitted amounted to £8,117; the assets, valued at £578, had realised £1,899; a dividend of 1s. 6d. in the £ had been paid, and a further 8d. in the £ was anticipated. The business was established by the applicants' father in 1865, and on his death in 1899 was continued by the three sons and another person for the benefit of the family; it consisted chiefly of printing for outside proprietors two or three newspapers or journals, and of printing and publishing on their own account three other journals. For ten years prior to the receiving order the business had been gradually decreasing, more especially since the War began in 1914, causing a considerable reduction in the size of the journals and the loss of all the advertisement revenue of their own three journals. The applicant attributed his firm's insolvency to decline in its business, especially since the war, in consequence of which it lost all its advertising revenue. His Honour granted a discharge, subject to a suspension of three months.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

L. S. Blower and H. E. Blower, printers and stationers, Bourne Hall-road, Bushey, Herts, under the style of the Bournehall Press.

United Newspapers (1918), Ltd.

At the second annual dinner of the Federated House Chapel of United Newspapers (1918), Ltd.—(the *Daily Chronicle* and the *Sunday News*)—which took place on Thursday night at the Hotel Cecil, Brigadier-General E. B. Cuthbertson, in supporting the toast of "The Firm," announced his impending resignation of his positions as managing director and a director of the company.

Mr. C. A. McCurdy, K.C., chairman of the company, in responding, laid stress on the services rendered by General Cuthbertson, and expressed to him the regret that all members of the board felt at his retirement.

Mr. McCurdy will in future, as chairman and managing director, be responsible for the direction of the newspaper properties of United Newspapers (1918), Ltd.

Personal.

THE new chief overseer of the *Newcastle Chronicle* is Mr. Robt. Watt, a Glaswegian, who served his apprenticeship on the *Glasgow Evening News* He has lately been in the service of the *Newcastle Journal* and *North Star*.

THE Companionship of that journal gathered "around the stone" on Monday morning to bid farewell to Mr. Watt, regret and congratulations being expressed.

MR. B. EMBLETON, organiser of the Printing Machine Managers' Trade Society, has been elected to the London County Council; and Mr. P. Astins, of the same society, has been elected to the Essex County Council.

MR. A. L. HITCHIN (a director of Messrs. Philipson and Son, Ltd., photo engravers, Oxford-street, Newcastle-on-Tyne) has received the honour of re-election as president of the Newcastle and Tyneside Photographic Society.

MR. J. CUMMINGS, the well-known Newcastle-on-Tyne compositor, retained his seat as a member of the Guardians by a substantial majority on Monday.

MR. PHILIP MILLWOOD, for several years secretary to the *Daily Herald* Co, who has also done much valuable publicity work for the paper, has, to the regret of all his colleagues, resigned his position. He takes with him the best wishes of all who have been associated with him.

CAPTAIN R. KING SMITH, of the Golden Valley Paper Mills, is to give a lecture on papermaking to the members of the West of England Centre of the Printers' Managers and Overseers' Association, in Bristol, on April 21st.

MR. J. R. FIRTH, of P. J. Firth, Ltd., Sydney, Australia, has now arrived in this country, where he will spend the next three months. His headquarters will be chiefly in London, but he will also sojourn at Manchester and Glasgow.

MR. FIRTH will be on the look out for new lines of box-making materials and for anything new in box making machinery, also in a lesser degree for printing machines.

THE Australian visitor has already had an opportunity of inspecting a number of German machines, and he hopes to investigate American products on his way back to Sydney by way of New York, Chicago and Vancouver.

MR. A. J. WILLGOSS, a director of Gordon and Gotch (Australasia), Ltd., is on his way to this country for a holiday. Before leaving Sydney he was entertained by his colleagues at lunch. Mr. Willgross was to leave by the "Maloja" on March 10th.

MR. JOHN C. VAN DER VEER, London editor of the *Telegraaf*, Amsterdam, has been re-elected president, and Mr. J. Massip, London editor of the *Petit Parisien*, Paris, and Mr. Harold Neill, London editor of *La Prensa*, Buenos Aires, vice-presidents of the Foreign Press Association in London.

THE office bearers elected at the recent annual meeting of the National Association of Wholesale Stationers and Paper Merchants were: President, Mr. H. Bradly; vice presidents, Mr. W. E. Adlard, J.P., and Mr. A. K. Ramsbottom; hon. treasurer, Mr. F. M. Carson.

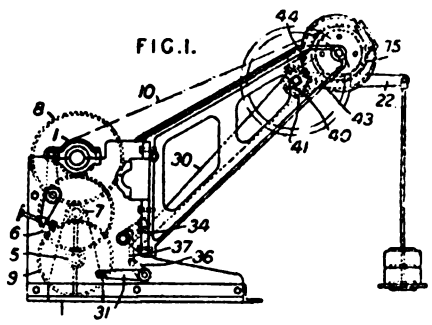
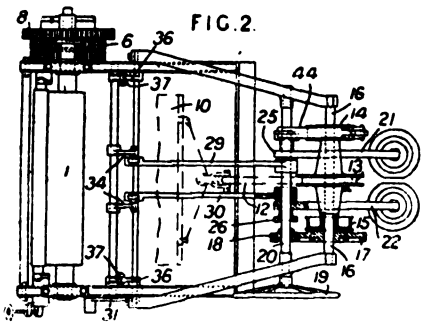
New Inventions

Straining Printing Surfaces.

Messrs. Penrose and Co., Ltd., and Mr. M. Owen have patented an invention that relates to tension mechanism for applying flexible printing and like sheets to cylinders, particularly of the type referred to in specification 188,148, for subsequent transfer to a cylinder on the printing machine proper comprises gravity operated friction drums for subjecting the sheet to tension as it is wound on the cylinder and manual mechanism whereby a preliminary tension may be applied independently of the friction mechanism. The cylinder 1 is rotated from a pulley 9 through reducing gearing 5, 6, 7, 8, and the sheet 10 is attached, at its end remote from the cylinder, to a cable 12 passing over a pulley

FIG.1.





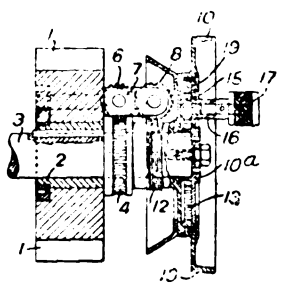


FIG.2.

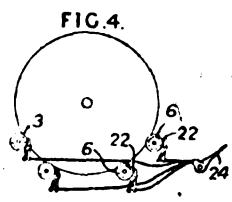
13, which is connected to friction drums 14, 15 loose on a shaft 16. Friction straps 43, 44 are normally held closed on the drums 14, 15 by toggle linkage 40, 41 connecting the straps to weighted levers 21, 22. The levers 21, 22 are formed with sleeves 25, 26 mounted on a shaft 20, and to these sleeves are keyed levers 29, 30 connected by linkage 34, 36, 37 to a treadle 31 whereby the levers 21, 22 may be raised to release the drums 14, 15 from friction. When so released the pulley 13 can be rotated, to put preliminary tension on the sheet 10, by a spur wheel 17 and pinion 18, and a hand wheel 19 on the shaft 20.

Tripping Arrangements, etc.

Printing machines of the kind in which a plurality of printing rollers are driven at equal speed are the subject of a patent by Mr. W. Pickup, and are constructed with means for setting the printing rollers relatively to their driving shafts while the machine is in motion. Each roller is separately adjustable by a knob or its equivalent provided on a rotating part, to which it is connected by gearing, and the

arrangement is such that an angular displacement of the knob on the rotating part causes an adjustment of the printing roller in one direction. The rotating part is preferably a hand wheel 10, adapted to adjust the printing roller in the other direction in known manner when the wheel 10 is retarded. In the form shown gear wheels 1 for rotating the mandrels 3 of printing rollers are driven from a crown wheel, and each wheel 1 is freely mounted on a sleeve 2 fixed to the mandrel 3, and the parts 1, 3, rotate together owing to the engagement of a worm wheel 4 on sleeve 2, with a worm 6 mounted in brackets 7 fixed to wheel 1. To adjust the wheel 1 on its mandrel 3, when the machine is in motion, the hand wheel 10 is formed with a worm 12 engaging a worm wheel 8 geared to the shaft of worm 6, so that, when the wheel 10 is retarded by hand it causes the worm 12 to operate the worm 6, and so causes relative movement between the wheel 1 and mandrel 3 in a known manner. The wheel 10 is formed with internal teeth 13 geared by a pinion to a pinion 15 mounted in a plate 10^a freely mounted on the mandrel 3, and held by an annular member 19 against axial movement. The shaft of pinion 15 is mounted in the plate 10^a, and terminates in a knob 17, which normally rotates with the wheel 10 without rotation about its own axis. If however, the knob 17 is gripped by hand while the wheel 10 rotates, the knob 17 is caused to rotate, and the gear 15 operates the gear 13, and causes the wheel 10 to advance, and the worm gearing 12, 8, 6, causes a displacement between the wheel 1 and mandrel 3. A guard prevents injury to the operator by the worm gearing. Mr. Pickup has also patented a multicolour printing machine in which multicolour designs are printed by a plurality of rollers driven at equal speed constructed with means whereby the rollers can be set relatively to their shafts while the machine is running. The setting mechanism for each roller comprises a pair of brake drums, hand wheels, or the like, which when retarded causes relative motion between the

FIG.4.



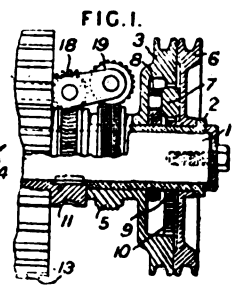


FIG.1.

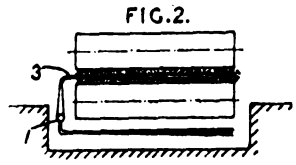

roller and its driving shaft, the retarding of the one drum causing movement in one direction, and the other in the reverse direction. As shown, the mandrel 1 of each printing roller is driven by a spur wheel 13 engaging a crown wheel, motion being transferred from the wheel to the mandrel by the engagement of a worm 18 fixed to the wheel 13 with a worm wheel 11 on the mandrel. A pair of brake drums 3, 6 are freely mounted on a sleeve 2 fixed to the mandrel 1, and are geared together by a wheel 7 on a bracket 8 fixed to the sleeve 2, which engages internal teeth 10 on the drum 3 and external teeth 9 on the drum 6. The drum 3 is integral with a worm 5 engaging a worm wheel 19 geared to the shaft of worm 18. When the drum 3 is braked by a band or by a brake block the wheel 5 moves relatively to shaft or mandrel 1, and the wheel 19 is driven, and causes the worm 18 to displace the wheel 13 relatively to its mandrel, the printing roller being moved backwards on its shaft. Braking of drum 6 causes a forward displacement. To enable a number of rollers to be operated from a common distant position, the brake drums 3, 6, Fig. 4, are operated by levers 24 assembled near together and connected by Bowden wires to brake blocks 22, which act on the drums.

Drying Paper.

To facilitate drying in paper, cardboard, pulp, and like machines, Mr. F. Grewin

FIG.2.

suggests that currents of air, which may be heated, be blown with great velocity through the confined spaces formed by the different parts of the machine together with the paper web or the like and the drier felts. Compressed air piping 1 is laid along both sides of the machine and successive nozzles 3 are alternated on both sides of the machine, thus setting up currents in opposite directions.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

WITH the advent of the Easter vacation there has come the termination of the first period of trading, the phase devoted to winter and spring traffic. Normally this should constitute as good a business session as any in the year. From now onwards there will be the counter attractions of holidays, the inevitable summer slackness, and a less keen inclination to strive after openings for trade. History usually repeats itself in the paper trade, and custom dictates a lowered demand for paper between May and August. There is, unfortunately, no great amount of satisfaction with the progress of trade so far this year. While the news-print section has increased its output and registered a record in Colonial export, there is still the loud complaint that prices are unprofitable. Foreign quotations are lower in the English market than our own mill prices. In other words, our cost of production is too high. There is no better test of mill costs than a full order book; and if under conditions of maximum output there is still a difficulty in meeting Continental competition, the true fact of the whole matter can only be that we are at a disadvantage in prime costs and the purchase of material. In less well-equipped sections of the industry than the news-print, it might be argued that modern machinery and a keener organisation would favourably influence costs per ton; but the fact is that some of our news-print mills who find it difficult to realise reasonable profit margins are models of efficiency.

* * *

THERE is room for rumination over the fact that English supremacy in papermaking was challenged by the introduction of wood pulp as a supplementary material to rags. With textiles as the basic raw stuff, there was a natural restriction on the output of paper. For one thing supplies of rags were limited, and for another prices were necessarily high. Conjointly there was a fine standard of quality, and little opportunity to widen the field of paper usage. The introduction of wood pulp as a commercial proposition well on in the last century definitely placed the papermaking lead in the hands of those countries naturally endowed with the new papermaking material. We may still hold pride of place in fine papermaking, but for bulk production we are definitely confined to a place in the rear, or at least until such time as we discover new types of domestic material, or, alternatively, adopt national measures of trade preservation.

Union Labour in the Paper Mills.

Further steps have been taken with a view to eliminating non-unionists in the paper trade. Following the tendering of notices on the question at Messrs. A. E. Reed's Riverside Paper Mills, Dartford, by the members of the N.U.P.B.M.R. and P.W., a conference was held between Mr. Ralph Reed, representatives of the Employers' Federation, Mr. Wm. Ross and Mr. A. Large for the National Union.

The outcome of that conference was the posting up of the following notice at the six paper mills belonging to Messrs. A. E. Reed and Co., namely, Riverside, Horton Kirby, Bridge, Tovil, Aylesford, and Farncombe:—

> The directors have come to the conclusion that in the interests of the firm, the employees, and the industry as a whole, the time has come to require all employees, other than craftsmen, to join one of the two unions with which all agreements with the Employers' Federation have been made. All workers who are not already members of a trade union are therefore required to take up cards of membership forthwith in either the National Union of Printing, Bookbinding, Machine Ruling, and Paper Workers, or the Amalgamated Society of Papermakers.
>
> In the case of craftsmen, etc., these will be free to join the Union of their craft.

Similar negotiations, which had been proceeding for some time between representatives of the National Union and Messrs. Lloyds, of Sittingbourne and Kemsley Mills, were also brought to a head, at the same time, by that firm also agreeing with those representatives to post up similar notices in their mills.

The result has been a very large increase in the membership of the unions concerned and the securing of the 100 per cent. organisation aimed at in all those mills.

LITHUANIAN CARDBOARD-BOX INDUSTRY.—In the course of a recent address at the London Chamber of Commerce, Mr. K. Gineitis, the Lithuanian Consul in Great Britain, stated that after the war the cardboard and cardboard-box industry developed in Lithuania, and that to-day there were in that country twelve establishments devoted to this branch of manufacture. Thirty per cent. of the cardboard output, he said, was exported to Great Britain.

Exhibitions

The Seventh International Printing, Stationery and Allied Trades' Exhibition

is one of the outstanding topics of conversation in the trade at the moment, and most of us are now occupied in making arrangements necessary in order that our show shall be as attractive as possible.

Has it struck you, however, that as there are wheels within wheels so there are exhibitions within exhibitions? The Special Exhibition Number of "The British and Colonial Printer and Stationer," on May 7th next, will be an exhibition which will excite a wider interest even than the Exhibition itself in that it will reach our subscribers in the remote corners of the earth who are at too great a distance to actually visit the Royal Agricultural Hall.

Then again it will serve the purpose of informing the trade as to the exhibits which they should see, and will in fact be in every respect a guide for discriminating visitors to the greatest event in Printerdom.

It is essential that your announcement should be prominently displayed in this issue.

Space is now rapidly being booked.

One of our representatives is at your disposal.

"Procrastination is the thief of time."—Let us know to-day when he shall call upon you.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 98. NUMBER 17. [REGISTERED AS A NEWSPAPER.] LONDON: APRIL 23, 1925. EVERY THURSDAY. PRICE TWOPENCE.

The Printer and His Paper.

Mr. J. R. Riddell, Principal of the London School of Printing, Explains to Papermakers some Points of Practical Difficulty.

It is not my intention to enter into the question of standardisation of sizes, substances, or the number of sheets to a ream, though I believe this matter to be much overdue, and, if adopted, would prove a great boon not only to the printer but also to the paper-maker. Innovations, however, cannot be introduced until the time is ripe for them; in fact, I question very much if these suggestions would be readily adopted by the general body of users of paper. I have a good deal of sympathy with the ordinary person in making changes.

To be frank, if the printer is unsuccessful in producing a good piece of work, he will usually blame the paper-maker and sometimes the ink manufacturer, although it may be that he, himself, is at fault for its shortcomings owing to lack of knowledge of the difficulties and conditions associated with the making of paper.

Again, the papermaker often takes the attitude that his laboratory test is all that is required, but I submit that the true test of paper is that it be suitable for the purpose for which it is to be used, and that many of the difficulties met with could be overcome by a closer collaboration between all who take part in the production of printed matter.

News.

Probably there is no section in the whole of the papermaker's business where there are more insistent demands for care than in the production of "news." This is quite understandable when one considers that a "break" may mean a loss of output of over 20,000 copies due to the time taken in starting up again. As the successful newspaper is the one which is on the streets a few seconds before its rivals, one can appreciate how essential it is that there should be the closest co-operation between the papermaker and the newspaper printer in order to prevent the waste of time and material which such breaks entail, and to assist in reducing to a minimum the cost of production which, on account of the enormous capital outlay and expensive organisation entailed, is essential.

After referring to difficulties arising from faulty reeling, mill joints, and "scorch spots" (brown spots, pinholes, etc.), Mr. Riddell came to "conditions."

There are certain conditions which give a deal of anxiety to the printer: brittleness and the trouble caused by static electricity, which is probably more prevalent in America than in this country. It is quite the usual thing in the States to have an electric neutralizer on the machines to overcome this difficulty. This condition prevents the sheet from running with even tension, and makes the paper hang or cling to certain parts of the machine. The usual practice on this side of the "herring pond" is to smear glycerine on what are called the "pipe rollers," but my own view is that the electric neutralizer is a much more effective means of overcoming the difficulty when this arises. It is a general practice for the pressman to sponge the ends of the reels with water and thus "manufacture" a little humidity.

These flaws and conditions are probably the most frequent causes of breaks and imperfect printing. I feel that something could be done by papermakers to reduce, if not eliminate, the causes which entail loss of temper, delays and serious waste of time, energy and money.

In summarising the requirements of paper for newspaper purposes, all that one can say is that a paper of suitable substance and finish should be used, free from the defects mentioned, and, of course, suited to the particular character of the newspaper. The same class of paper would not be required for purely letterpress work as is necessary for the reproduction of illustrations, and in this section there is great scope for co-operation between the papermaker and the printer to appreciate much more fully the difficulties of the other fellow.

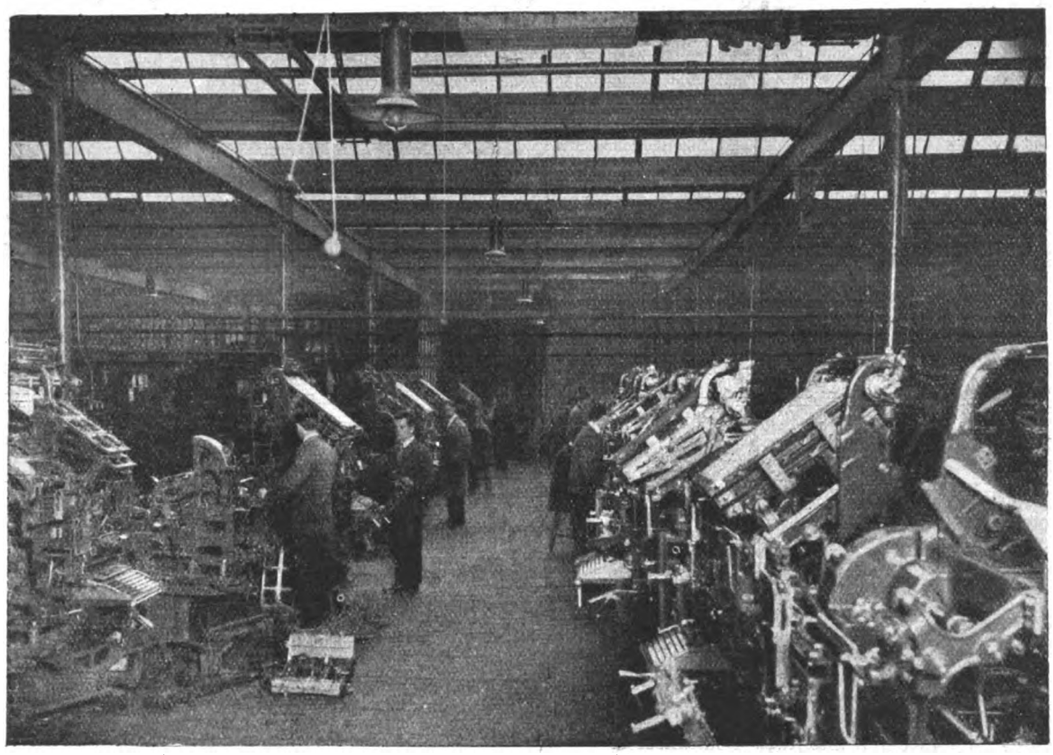
Printings.

Under this heading reference will be made to some of the more general difficulties met with in a section which probably consumes more paper than any other branch of the printing industry. These are of such a varied character that it is quite impossible to do other than touch on a few of the qualities mainly used in producing commercial printing.

Super-Calendered. — The most frequent troubles encountered by the printer in using ordinary super-calendered printing paper both in bookwork and for commercial requirements are irregular finish, pinholes, specks, curling of the edges of the paper, and the annoyances arising through static electricity, which gives rise to "set-off" and limits output, not only through the difficulty of feeding the sheet into the machine, but also in its delivery.

The question of sizing is one that should receive special consideration in relation to the particular class of work the paper is intended to be used for. Unfortunately, however, I fear printers and publishers are more concerned about the price than they are with the suitability of the paper for the job. My own experience proves that it is frequently more profitable to pay a little extra for the paper and make it up on the increased output. The paper salesman can be of great service in this direction. He ought to know something of the possibilities and limitations of the paper he is selling, but I fear many are totally ignorant of anything but making sales, forgetting that service is the main thing.

Antiques.—Owing to the demand of publishers to have a bulky book, cheap feather-weight papers are the printer's bug-bear, due to "fluff," which is a serious hindrance to output. It is not an unusual thing for a printing machine to be stopped, washed up, and the forme cleaned out two or three times during the day. I have known it necessary to wash up after every ream. The average printing machine cannot be washed up and the forme cleaned out under twenty minutes, therefore it does not require me to emphasise the need for attention to be given to this matter by the papermakers. A flatbed printing machine may cost twelve shillings an hour to run. One can appreciate the loss which is entailed through "stops," and every means should be taken to reduce these to a minimum. No doubt the reply will be that it can easily be overcome if the price is paid.



Imitation Art.—Similar difficulties are experienced in this make of paper as with super-calendered. Possibly a greater variation of finish is obtained in this make than in any other. I submit this is a question entirely for papermakers, therefore I leave it with them.

Coated Papers.—It is not an infrequent occurrence that the surface of a coated paper will be full of small holes, as if a number of little air bubbles had burst, leaving the surface of the paper irregular, and sometimes there is a streaky appearance in the coating. Both these make it impossible to get a regular result when printing half-tones and it is quite impossible for a printer to get consistent colour values when this occurs. Why certain sheets in the same making, or at least in the same delivery of paper, should give markedly different results is difficult for the printer to understand. Many of the alleged shortcomings of what is known as the three-colour process are due to imperfect paper. There is no process more capable of giving a true rendering of the colour value of an original painting when well-etched blocks and suitable paper are used.

Every attention should be given to the coating of the paper. The coating the printer looks for is one that will take the ink properly from the forme and does not

Paper read at the recent General Conference of the Technical Section of the Papermakers' Association.

This photograph, taken a few weeks ago, shows a portion of the Linotype Erecting Department at Altrincham, Cheshire

The average monthly sales of Linotype machines during the past two years have been much larger than at any other period of this Company's activities. The Model 4 with Side Magazines alone has heavily taxed the resources of the Works at Altrincham, and there is now no doubt that jobbing printers in this country, the Continent, and the Colonies have determined for themselves that the modern Linotype gives them the facilities they need for the rapid composition of display work and general jobbing.

"pluck." This fills up the printing plates, causing defective prints, and consequent reduction of output from expensive plant. The printer can and does sometimes get over the difficulty by reducing the "tack" of the ink he is using, but when he does this he immediately begins to degrade the tone of the illustration.

Is there any necessity for me to suggest that lumps of esparto and other foreign substances in a sheet of paper are very serious things for the printer? There is a decided difference between pre-war paper and that now supplied. Is the difference due to a change of the material used for coating or to the introduction of new ingredients in the coating mixture? If there is a change, should not the printers be told and not left to find out that there are new conditions which might call for experiment and possibly change of methods to ensure satisfactory results?

A common quality required in all printing paper is that it should be "receptive" to pressure, sufficiently absorbent of ink, even in tone, and possess regular finish on both sides so far as that is possible. This especially applies when the sheet has to be printed on both sides. It should also be free from acids and alkalies, squarely cut, and free from particles arising through the cutting by rotary knives, and last but not least, carefully sorted.

Mr. Riddell proceeded to ask a few questions regarding a few things printers would like to know.

Lithographic Papers.

In considering papers for lithographic printing, he proceeded, there is not a great deal of difference between them and those used for good letterpress printing, except probably in the comparatively new process of offset, where a much harder sized paper can be used, and from which really excellent results are obtained in such work as share certificates, business letter headings, and similar classes of work, without damping the paper. A soft-sized paper is not suitable for offset printing, as the rubber blanket on which the impression is taken from the printing plate, and which comes in contact with the sheet of paper, "plucks" the surface of the paper, leaving the particles on the blanket. A paper of the character of "cartridge" makes quite a good stock for offset printing. I predict a new life for hand-made paper for artistic and high-class prints when produced by this process.

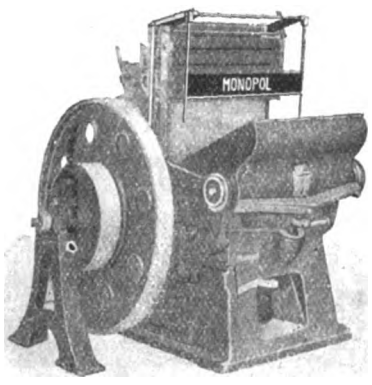
Necessary Conditions in Printing Papers.

Stretching of Paper.—One of the greatest handicaps to the colour printer is the altering of the size and shape of the sheet between printings. When it is known that the paper is required for close register work, it ought to be cut in one direction from the web. This is not always done; suggestions have been made that the short way of the paper to be printed should be the same as the machine direction, i.e., that the sheet should go round the printing machine in the same way that it is made on the paper machine. From tests made, I have found better results were obtained in so far as stretch is concerned, by printing across the fibre or opposite to the machine direction. In my opinion a sheet cut in this way gives a greater resistance to "the pull" of the printing machine and the ink used.

When on the question of paper for colour work I strongly advocate that paper should be kept in a regular temperature. If the printer gave more attention to his stock room, kept it at the same degree as his machine-room (about 65 degrees) taking care to protect the sheets from the atmosphere during the various printings, he would have less trouble with register than is usually experienced.

Another printer's "bugbear" is represented by the edges of the paper, which are frequently wavy and not cut square. When this condition exists it is impossible to get register on a colour job, and a great deal of time is taken in "seasoning" the paper, of which there are different methods, the most frequent being the hanging up of the sheets in the printing room. The Willsea curing machine, made in America, is well spoken of.

It is essential that the paper be kept absolutely flat and that it run squarely into the machine during the operation of printing. These last two points apply to all papers, and if papermakers can eliminate or reduce these faults to a greater extent, they will be assisting the printer to produce better work.



I would submit another suggestion in relation to packing. I do not intend to raise a "hornet's nest" about my ears by suggesting that the wrapper and string ought not to be included in the weight of paper charged for, but certainly greater care should be taken in the packing of paper, and in every case tape should be used in place of string. I am very much in favour of the plan sometimes adopted in the United States, whereby good printing papers are boxed, and one mill prints on the top sheet in each box an impression indicating that that particular make of paper is suitable for the class of work which the impression depicts.

There is another point I would like to suggest, and that is that when the stock is cut it would be helpful if the papermaker used a suction cleaner and removed all the loose particles of paper or fluff which may be adhering to the four sides. This would be a boon to the printer who takes a brush and sweeps it off into the air, with the result that it settles on the machines and plates.

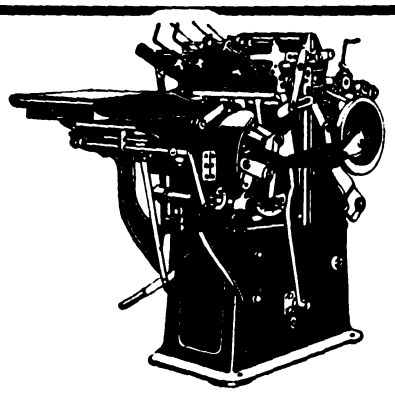
Before I finish let me say that, in my opinion, most of the work produced by not a few of the many well-known printing firms which have a world reputation, is not always due to their particular skill or genius, but to their foresight in choosing the right paper on which to print the job.

Your Association, through its technical section, is doing a valuable work, but I think more could be done by forging a still closer link with the printing technical schools which could with advantage co-operate with you by submitting your products to the tests which matter. Finally, let me put forward a plea, for a closer co-operation between all who are associated in the production of what might be termed good commercial printing.

There are nine paper mills in Greece, four of which are of some importance, producing board and packing paper. Sweden, Austria and Finland compete keenly in the Greek markets to supply the necessary cardboard for cigarette boxes.

BUILT IN 3 SIZES

"Monopol" Art Platen



¶ **Specially built to produce the very best Heavy Tint and Register Colour Work at a High Speed.**

¶ The Roller Carriage has a special spurwheel drive, which ensures a perfectly smooth and noiseless motion. This important improvement does away with the cam action in the main gearwheel, which is subject to great wear and necessitates frequent costly repairs.

¶ Throw-off of Inking and Distributing Rollers from each other and from the Inking Cylinder by a single lever movement.

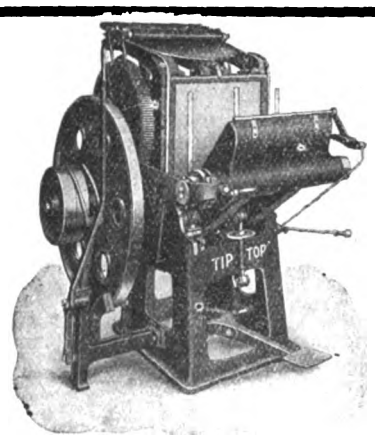
¶ Separate Drive for Inking Rollers, permitting inking-up without running machine, or enabling the platen to be worked for embossing, etc., without the inking rollers moving.

¶ **Automatic Hand Safety Guard** which can also be used as a throw-off. Only a gentle touch of the guard is required to stop the machine.

BUILT IN 3 SIZES.

"Monopol" Safety Platen

will successfully tackle 95 per cent. of your platen work, including the finest Register Colour Work, affording a handsome profit on everything it does.



Speed Range: 2,000 to 3,500 impressions per hour.

The impression is automatically thrown off in case of a misfeed.

The sheets are fed by hand to front gauges on a sloping feed board, in a similar way as on a cylinder machine.

PRINTED SIDE UP DELIVERY, each sheet being in full view of the operator.

The delivery device can be raised out of position in a few seconds to allow for easy access to the platen.

BUILT IN 4 SIZES.

"Tip-Top" Jobbing Platen

Improved inking apparatus of the latest disc type. Platen is cast in one piece and works from positive fixed centre (no cams).

Camless drive of roller carriage.

Base and vertical bed cast in one piece.

Rigid, parallel impression.

Very handy and simple impression regulator.

On the main pinion a steel section is let into the gears at the point most subject to wear during the actual impression.

Throw-off of inking rollers by simple lever action, whilst machine remains in motion.

Adjustable runners.

High speed and light and noiseless running.

Particulars can be obtained from, and a demonstration arranged by the Sole Agents:

Who's Who

IN THE

PRINTING & ALLIED TRADES.

Mr. J. R. Riddell.

Mr. John Robertson Riddell, through whose instrumentality the exhibition of British printing was arranged at the London Printing School, was born fifty-one years ago. He received his early education at Rosemount School, Aberdeen, and experienced his first connection with print as an apprentice in the granite city to Messrs. Taylor and Henderson.

Mr. J. R. Riddell.

After spending a considerable number of years in various capacities, during which his knowledge of the different branches of the industry was further broadened, he became associated with the St. Bride Technical School. Under his direction as Principal the School became highly successful, and two years ago it was transferred, as the London School of Printing, to its present location in Stamford-street under the triple control of the London County Council, the employers and the trade unions of the printing industry. Besides holding the position of Principal of the present institution Mr. Riddell is Technical Adviser on the Printing and Kindred Trades to the Ministry of Labour Training Section. Amongst his other associations it may be mentioned that he is hon. secretary of the Livery Committee of the Stationers' Company as well as hon. secretary of the Stationers' Company and Printing Industry Technical Board. He is also a Governor of the Stationers' School, Hornsey, a Governor of St. Bride Foundation, a Freeman of the City of London, whilst as a member of the Printers' Managers and Overseers Association he has on several occasions addressed that organisation with much approval. Mr. Riddell is keenly interested in the printing methods and practices of other countries, and is particularly familiar with the modern printing plants of America. Towards the close of last year he made a tour of the Continent extending over 2,000 miles, visiting the more important European printing centres, and on his return home arranged a comprehensive exhibit of foreign printing specimens. Recently Mr. Riddell was given the opportunity of bringing the paper difficulties of the printer before the Technical Section of the Papermakers' Association in an important address entitled "The Printer and His Paper," which appears in this issue.

The *Riga Times*, which has just been published, is the only English newspaper in Latvia.

The Seventh World Number of *Papier Zeitung* is again an impressive production both on account of its striking advertisements and the publication of informative articles in English, German and French.

Trade Notes.

Multigraphing Machines and the Factory Acts.—At the council meeting of the London Chamber of Commerce on April 9th it was unanimously resolved to put forward amendments to the proposed Factories Bill in order to secure exemption for multigraphing machines used in business offices. Recently, it may be remembered, a ruling was given by the Secretary of State for Home Affairs to the effect that processes for multigraphing, by use of machines set with type, were forms of letterpress printing, and that any premises in which those processes were carried out regularly and to a substantial extent, came within the definition of letterpress works, and were subject to the Factory Act.

The *Morning Post* will appear in a new form on Monday next, April 27th. The page size will be reduced, with an increase in number from 16 to 24. New and extensive printing machinery has been introduced to cope with the alteration.

The *Yorkshire Evening News*, in addition to the *Yorkshire Evening Post*, whose proposed simultaneous printing at Leeds and Doncaster was reported in last week's issue, are also making arrangements for similar duplicate publication in the same towns.

Printers' Pension Election.—The 103rd election of printer pensioners was held on Saturday at the Connaught Rooms, Great Queen street, W.C. For the 149 benefits offered (127 pensions and 22 grants) 295 candidates competed. The voting was heavy, 128 applicants polling more than 1,000 each. The official result will be announced at the annual meeting of the Printers' Pension Corporation at St. Bride Institute next Saturday. £32,000 a year is distributed in pensions and benefits.

Aberdeen Master Printers.—Members of the Aberdeen Master Printers' Guild met for their annual dinner in the Palace Hotel on Friday night. Mr. James Blair (chairman) presided over a goodly company. Mr. J. A. C. Coutts proposed "The Scottish Alliance," Mr. Theodore Watt responding; and Mr. Edward W. Watt gave "Our Guild," the chairman making the reply.

Monday next, April 27th, is the date of the annual dinner of the London Master Printers' Association, and those wishing to attend but who have not yet secured tickets should lose no time in making application to 7-10, Old Bailey, E.C.

Alderman Robert Martin, J.P., of West Hartlepool, passed away last week at the age of 70, after 35 years of public service. Alderman Martin served his apprenticeship on the first newspaper printed in West Hartlepool, and was subsequently employed on newspapers in Darlington, Newcastle and Hull. In 1880 he set up in business as a printer, and at his death was head of Robert Martin, Ltd., one of the leading printing firms in the town. He secured a seat on the Town Council in 1890 as the nominee of the local branch of the Typographical Society, of which he was a member for nearly 50 years. In 1911 he was elected Mayor of the borough, and was re-elected the following year.

The death has occurred of Mr. Roland Goodwin, for many years chief reporter of the *City Press* and later bailiff of the City of London Court.

The death is announced of Mr. Charles T. Thompson, superintendent of Foreign Service of the Associated Press, and a journalist of international repute.

The late Mr. Joseph Cecil Clay, Wellington, Salop, at one time a banker and afterwards in business as a paper manufacturer, who died in September, aged 77 years, left estate of the gross value of £43,351, with net personalty £36,542.

The late Mr. John Reburn, of Sutton, Surrey, for many years commercial manager of the National Press Agency, and managing director and secretary of the Western Printing and Publishing Co., owners of the *Western Chronicle*, left £21,942 (net personalty £17,404).

"Our Empire" is the title of a new monthly, the first number of which has just been issued by the British Empire Service League.

Costing for Printers. — An intensive summer-term class for the study of Costing will be held at the London School of Printing on Wednesday evenings during May and June. It is essential that early application be made for enrolment by all who desire to take up this course, which is specially arranged for those holding executive positions. An examination will be held at Stationers' Hall on Monday, April 27th, at 6.30 p.m., for those attending the current classes.

Institute of Cost and Works Accountants.—The fourth annual costing conference of the Institute will be held at the Hotel Great Central, Marylebone-road, London, N.W., on Friday, May 1st. The Right Hon. the Viscount Leverhulme, president of the Institute, will open the proceedings. At a morning session, 10.30 a.m. (chair to be taken by Sir Edgar Sanders), the subject of "Cost accounting in relation to industrial policy, especially having regard to the trend towards price control," will be dealt with by S. L. Gill, F.C.W.A., A.C.A., and D. L. Moran, F.C.W.A., and at an afternoon session, 2.30 p.m. (chair to be taken by Sir Herbert Austin, K.B.E.), the subject will be "Budgetary Control," by Perry Keene, F.C.W.A., and F. T. Quennell, F.C.W.A. The afternoon session will be followed by a social gathering.

The Department of Overseas Trade is informed that the Union of South Africa Department of Posts and Telegraphs is inviting tenders for the supply of postal stores. Tenders to reach the chairman of the Union Tender Board by May 27th, 1925. The stores required cover a wide range and include paper.

There was one case of lead poisoning in the printing trade during March and three fatal accidents in the paper, printing, etc., group of trades.

A report from Norway describes the paper market as very firm, with prices in some lines better than they were some weeks ago.

Trade Union Matters.

T.A. and the Federation Council.—The following members of the Typographical Association have been nominated as delegates to the Administrative Council Meeting of the Printing and Kindred Trades Federation to be held at Bristol on May 13th, 14th and 15th next: Northern Division—Messrs T. S. Chalmers (Sheffield), W Hunt (Manchester) and G Nelson (Liverpool); Southern Division—Messrs. J. J. Atkins (Birmingham), P. G. McLees (Leicester), J. C. Nice (Gloucester), F. O. Roberts (Northampton), W. G. Stone (Bristol), F. Summerfield (Watford), F. H. Tarr (Exeter), E. Warton (London), and E. G. Yates (Watford). Two delegates are to be elected from each division.

The secretary of the Shrewsbury branch of the Typographical Association has informed the Executive Council that on the invitation of the Wellington (Salop) branch he had visited that branch in consequence of an expressed desire to make Wellington a section of the Shrewsbury branch. The members at Wellington were unanimously in favour of the proposal, and as both committees were agreeable to the amalgamation, the Executive Council gave consent to the recommendation.

Apprentice Point.—The secretary of the Conway branch of the T.A. has asked the Executive Council whether two years put in at the County School by an apprentice should count as two years' apprenticeship at the trade as it affects the question of his being allowed to work the linotype or monotype keyboards. The reply of the Council is that apprentices must serve three years at case before being allowed to work the machines.

Newspaper Workers and the Recent Ballot.—Protests are being made by the newspaper worker members of the Typographical Association against the acceptance of the agreement on wages and hours of newspaper workers, which, as stated last week, has been carried by 6,593 to 4,684.

N.U.J.—Mr. T. S. Dickson, of Glasgow, has been elected president of the National Union of Journalists, in succession to Mr. T. K. Sledge, of Leeds. Mr. A. J. Rhodes, of Plymouth, has been elected vice-president, and will in turn succeed to the presidency next year. Contributions of members last year reached the record total of £10,171, and the membership has increased by 209. Since 1907 the Union has paid out in benefits over £36,800. The annual meeting will be held next year at Edinburgh.

The "Douglagraph" Reproduction Process

The Inventor Explains his Methods and Gives the Latest Formulae for Working.

Amongst the various methods for the facsimile reproduction of typographic matter, black and white drawings, etc., one worthy of more attention that has yet been given to it is the "Douglagraph" process. This process, which has novel and attractive features is the one that Mr. George Douglas, M.B.E., F.R.P.S., the Superintendent of the Photo-process Office of the Survey of Egypt, invented and introduced to the Survey early in 1918, to meet a demand for a quick and reliable method. It has proved

George Douglas, M.B.E., F.R.P.S.

most successful and is now in daily use, producing over 2,000 printing plates annually. A description of this process was issued in a pamphlet Mr. Douglas published in 1920, but the present article deals more fully with the subject and contains the latest formulæ.

Facsimile reproduction of maps, plans, typescript or any drawing or document in black ink, on white translucent paper, may be made direct on a planographic printing

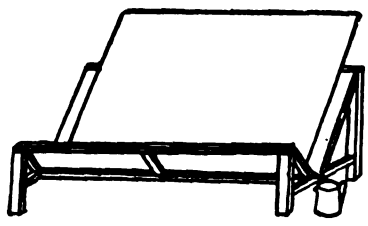

Fig. 1.—Coating Stand for Douglagraph Plates.

plate without the aid of a camera by this very simple process.

A grained aluminium or zinc plate is sensitised with a bichromated colloid and exposed to the light in contact with the original to be reproduced; the light penetrates the translucent portions of the drawing and insolubilises the sensitive coating, while the portion behind the opaque lines remains unaltered. A developer is applied which removes the soluble portions of the coating and produces a negative or stencil of the original, which shows as clear silver-grey lines on a chestnut-brown background. The plate is then covered with a special ink which adheres to the metal where the clear lines exist; the stencil is afterwards destroyed by water or weak acid, resulting in a facsimile ink image of the original, perfect in every detail. The plate can now be printed from lithographically.

The best originals for this process are those in black ink on white or blue tracing paper or cloth; therefore when originals are drawn specially for reproduction by this process, such mediums should certainly be used in preference to others. Any original, however, which is drawn or printed in a fairly opaque ink on white translucent paper, may be reproduced successfully by this method. Although some originals may

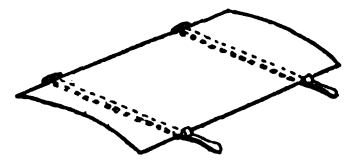

Fig. 2.—Sensitised Photographic Plate in Position for Drying.

appear quite suitable by reflected light, the fact that they are to be reproduced by transmitted light should be considered, and the original judged accordingly.

Typescript when typed with a black ribbon on thin white paper of even texture may also be reproduced by this process. When typing copies for this purpose, a sheet of black carbon paper should be placed with its surface in contact with the back of the paper. A reinforced impression is thus obtained which facilitates its reproduction. A number of pages can be printed down on a single plate making it possible to produce quickly

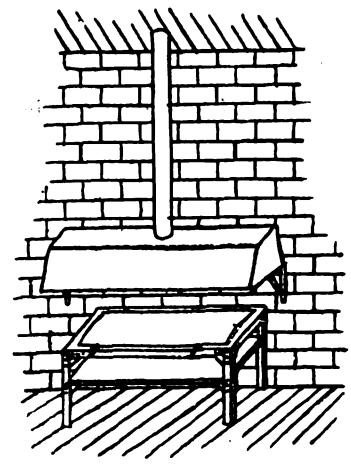

Fig. 3.—Hot Plate for Drying Douglagraph Plates.

and cheaply copies of reports, etc., in a permanent ink when the cost of setting the matter up in type and printing it would be prohibitive, while the results are better than those obtained by velocigraphing or similar methods.

Printed copies for reproduction by this process should also be on thin white paper of even texture, and the ink should be a dense black; dusting with fine bronze powder before the ink is dry will ensure opacity.

Thick paper may be made more translucent by treatment with a mixture of one part of castor oil and five parts of alcohol.

When originals are in several pieces, as when new detail has to be added or corrections have to be made, the additional work should be drawn on the same kind of paper and fitted to the original by cutting out an opening the exact size of the patch. There must be no overlap near the work, and erasures should be avoided as they alter the thickness of the paper and give trouble in exposure.

Originals on paper yellowish in hue require long exposures.

In addition to black ink the following colours when used in full strength can be successfully reproduced.—

Water-proof Inks:—Vermilion, brown, yellow, indigo.

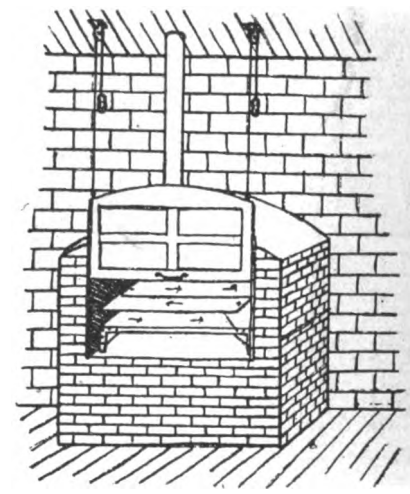

Fig. 4.—Oven for Drying Douglagraph Plates.

Cake Water-colours (rubbed down to the consistency of ink):—Indian red, scarlet, vermilion, burnt sienna.

Suitable originals having been described, the details for producing a planographic printing plate from them by the "Douglagraph" process is now given.

A clean finely-grained aluminium or zinc plate is washed well and wiped with a clean sponge; it is then coated with a sensitising solution made up as follows:

Solution No. I:—

Gum Arabic, white	600 grms.
Water	8 lits.
Liquid Ammonia	24 ccs.

Solution No. II:—

Ammonium Bichromate Pure	200 grms.
Water	1 lit.
Liquid Ammonia	8 ccs.

Take three parts of No. 1 Solution and add to it one part of No. II. The mixed solution works best when fresh so only enough should be mixed for the day's requirements. This solution is filtered and flowed over the plate from one side, after draining it is re coated from the opposite side and again drained. The stand shown in Fig. 1 will be found a convenient method of coating the plate; the excess solution drains into a measure, and when filtered can be used

again. The plate is now laid on two wooden bars fitted with projecting pieces, placed at a distance apart which is a little less than the width of the plate, see Fig. 2. This arrangement gives the plate a slight bend which ensures an even coating.

The plate thus fixed on the wooden bars is placed either on a hot plate or in a drying oven, see Figs. 3 and 4.

The temperature should not exceed 50 degrees Cent., as too high a temperature tends to insolubilise the coating, thus making the development difficult.

A number of plates can be prepared at the same time for convenience of working, and if kept in the dark will remain in good condition until the following day.

The original to be reproduced is placed in a vacuum printing frame, such as that illustrated herewith, and the sensitised plate laid on it, the face of the original in contact with the sensitised surface. The frame is now closed and pressure obtained by ex-

Vacuum Printing Frame (Pictorial Machinery Ltd.)

hausting the air. All these operations take place in a room illuminated by an orange coloured light.

The frame is now exposed either to sunlight or to electric arc or mercury vapour lamps. The exposure will vary between wide limits according to the whiteness and translucency of the original as well as the intensity of the light.

Originals on tracing cloth in strong sunlight require about 1½ to 2 minutes exposure, while those on ordinary white drawing paper require about 12 minutes. The exposure required with an enclosed arc lamp of 15 amperes at about 30cms. from the frame is from 3 to 4 minutes for originals on tracing cloth; when using mercury vapour lamps, about 6 minutes are required.

When exposure is completed the plate is taken out of the frame in non-actinic light. The image should show distinctly before development as yellow lines on a chestnut brown background.

A very small quantity of developer composed of:—

Glycerine	500 ccs.
Sulphuric Acid	25 ,,

is now poured on the plate and worked over with a sponge; in a few minutes the yellowness of the lines will disappear and the image will show up clear and distinct as silvery grey lines on a chestnut brown background.

It is most essential that the lines be developed quite clear, as otherwise the ink will be prevented from adhering to the metal; in other words, there will be a certain amount of colloidal matter between the ink and the metal, which in the after operations will wash away, taking the ink with it.

When the lines do not develop clear, a less concentrated developer will often be found effective. A useful strength is:—

Glycerine	200 ccs.
Water	100 ,,
Sulphuric Acid	15 ,,

When using this weakened developer care should be taken that it is not kept too long on the plate as it will destroy the stencil.

The plate is now cleaned with methylated spirit to get rid of the developer; this is best accomplished by pouring on the spirit in small quantities and wiping off with clean white rags, repeating the operation three or four times, and finally rubbing the plate dry.

It is now inked over with a special ink composed of:—

Asphaltum 15% solution in turps	4 parts
Photo Transfer Ink 15% sol. in turps	2 ,,
Shellac 10% solution in alcohol ...	3 ,,

The bottle is well shaken, and a small quantity of the ink poured on the plate and then quickly distributed by means of a piece of rag; it dries quickly and is then placed in water or under the tap and the stencil washed away.

This part of the process is usually assisted by rubbing with a sponge or a piece of cotton wool until the stencil has been completely removed. If difficulty is experienced at this stage, a sponge soaked in:—

Sulphuric Acid	10 ccs.
Water	1 lit.

and wiped over the plate will soon clean off the stencil.

The plate is washed well, dried off quickly and wiped over with a weak solution of gum arabic and dried. It is now passed on to the lithographer who treats it in the ordinary manner of a planographic plate, it will then be ready for printing any number of copies.

Newspaper Federation.

At the annual meeting of the Lancashire, Cheshire and Derbyshire Federation of Newspapers held at the Midland Hotel, Manchester, Mr. W. H. Andrew, principal of the firm of Messrs. J. Andrew and Co., the *Reporter*, Ashton, was re elected president for the third year in succession, and Mr. T. L. Whitehead (*Bury Times*) was re elected vice-president. The members of the Federation were the guests of the president at lunch, at which a presentation was made by the president to Mr. William Astle (*Stockport Advertiser*) of an album lettered in gold and colours containing the signatures of the members, in recognition of Mr. Astle's services as president of the Federation from 1918 to 1922. Mr. Astle is the president of the Newspaper Society. A gold wristlet watch was presented to Mrs. Astle.

Mr. F. Ch. Miller, paper agent, has removed from Paternoster-row to 57, Carter-lane, E.C.4.

SALE BY AUCTION.

By Order of the Sheriff—Without Reserve.

17, Tudor Street, London, E.C.4.

HIGHLY IMPORTANT SALE of the VALUABLE MAGAZINE PRINTING PLANT AND MACHINERY, including:—

FOUR ROTARY WEB MAGAZINE PERFECTING PRESSES by

R. HOE & CO., LTD.,

FOUR 35-H.P. WITTON-JAMES AUTOMATIC ELECTRIC DRIVING SETS FOR THE ABOVE PRESSES each with 7-H.P. Pilot Motor, Quantity of Spare Parts for the Rotary Web Presses.

TWO ROTARY ROUTING MACHINES, A No. 5 SIZE METAL FURNACE, TWO 21in. ELECTRIC BORING MACHINES, DOUBLE HEADED STEREO PRESS, FOUR ROTARY CASTING BOXES, A No. 5 SIZE METAL PLANER, FOUR 18in. and 19in. DRESSING SADDLES, all by R. HOE & CO., LTD., A 7ft. 6in. x 2ft. IRON DRYING CHAMBER, A 9ft x 2ft STEAM CHAMBER, A 42in. "HARRILD" SELF-CLAMP GUILLOTINE.

10, ½ to 4-H.P. 220 and 420-volt electric Motors by Witton-James, spare armatures for same, 126 Foundry chases, American case rack, 11 cases 6 to 48-point Sans Condensed No. 14, Oak Border Cabinet of 18 trays and contents, Letter Matrices, Electrotypers tapping tables, Plong tables, g.w etching baths, nearly new Plaster Sifting Machine,

23 BATES 4-TIER WORK TRUCKS.

Quantity of Stores including Chemicals, French Glue, Black and Coloured Letterpress ink, Emery cloth new buffers and other effects which will be sold by auction by, Messrs.

H. W. SMITH & MOON,

at the premises as above on Thursday, April 30th, at Twelve o'clock precisely. On view the day prior.

Catalogues from the Auction and Estate Offices, 6, Great James Street, Bedford Row, London, W.C.1.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines 6d.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6

The Printing Exhibition.

TIME moves on apace, and now only three weeks remain before the opening of the seventh international Printing Exhibition, which is to be held at the Royal Agricultural Hall, Islington, from May 16th to May 30th. Arrangements are being rapidly completed in respect of the many interesting functions that will lend additional attraction to the Exhibition. Amongst the numerous trade associations and other bodies which will be paying official visits, holding conferences, social gatherings, and so on, will be (in order of date): The Printing, Bookbinding and Kindred Trades Overseers' Association; the Worshipful Company of Stationers; the British Photographic Manufacturers' Association; the Periodical Trade Press; the Joint Industrial Council of the Printing and Allied Trades; the Federation of Master Process Engravers; the Master Bookbinders' Association; the Federation of Master Printers; the Newspaper Proprietors' Association; the United Kingdom Paper Bag Association; the Printers' Managers and Overseers Association; the Kent Newspaper Proprietors' Association; the Electrotypers' and Stereotypers Managers and Overseers Association; the Caxton Convalescent Home; the Stationers' Association of the United Kingdom; the United Bill Posters' Association; the London Master Printers' Association; the Printers' Pension Corporation; the Publicity Club, and the Jobbing Guild. As our readers will already be aware, a special Exhibition Number of the *British and Colonial Printer and Stationer* will be published on May 7th. In that issue we shall be including, in addition to special articles, general news, etc., much information as to the exhibits of individual firms, and other particulars that will help to guide visitors to features of special interest. That the printing and allied trades are awakening to the present-day necessity for publicity (for which, of course, this issue will be an opportunity) will be evidenced by the large number of firms that will be making their own announcements in this Exhibition Number.

Increased Paper Imports.

THE returns relating to the overseas trade in paper and cardboard—in both imports and exports—last month and for the first quarter of the year indicate further growth. Dealing first with imports—which last month amounted to 1,196,217 cwts.—there was an increase in quantity of 346,698 cwts. (40·8 per cent.) compared with twelve months ago whilst the value of the month's imports—£1,205,437—represents an advance of £312,219 (34·9 per cent.) contrasted with March last year. During the first three months of the year and the corresponding periods of the two preceding years, the quantity and value of the imports were as follows:—

1925 ...	3,468,481 cwts.	...	£3,545,871
1924 ...	2,656,063 ,,	...	2,922,741
1923 ...	2,676,230 ,,	...	2,844,293

As will be seen from the above figures, the imports during January to March reveal advances in quantity of respectively 812,418 cwts. (30·5 per cent.) and 792,251 cwts. (29·2 per cent.) contrasted with the similar periods of last year and the year before. In value the imports for the first quarter of the year exceeded those of the same period last year by £623,130 (21·3 per cent.) and those of January to March, 1923, by £701,578 (24·6 per cent.).

G. E. Bannister and J. H. Johnson, law writers and stationers, 15, Bridge-street, Stockport, under the style of Bannister and Johnson.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

E. W. Horobin, residing at Ernocroft Hall, Ludworth, Marple Bridge, Derby, and carrying on business at 10, South-parade, Parsonage, Manchester, Lancaster, under the style of the Alpha Publishing Co., publisher.

Sir Theodore A. Cook, 54, Oakley-street, Chelsea, London, author, journalist and magazine editor.

G. Weightman, residing and trading at 60, Glentworth-road, Radford, Nottingham, paper merchant and paper bag manufacturer.

East Anglian Printers' Readers.

A meeting of the Provincial Guild of Printers' Readers, East Anglian District, was held at Curat House, Norwich, on Saturday, with Mr. A. W. Daynes in the chair. There was a representative attendance of members from Bungay, Norwich and Beccles printing houses.

The chairman, in a short address, spoke of the progress of the Guild and mentioned the steps taken to benefit provincial printers' readers.

The secretary (Mr. W. E. Cooper) reviewed the past quarter's activities, and Mr. A. A. Oliver presented the financial report which showed a balance in hand.

It was agreed that the chairman and Mr. H. Edwards (Beccles) should visit Colchester at an early date to put the claims of the Guild before the readers of that town at a special meeting to be arranged by the secretary.

Mr. W. E. Cooper (Norwich) was appointed as district representative at the National Council Meeting to be held in London on Saturday, April 25th.

Visitors were subsequently entertained at tea by the Norwich members, and Messrs. H. Edwards and F. T. Peachey heartily thanked their hosts for their hospitality.

On the motion of Mr. C. A. Johns (Norwich), seconded by Mr. H. Edwards (Beccles), it was agreed the next meeting should take place at Great Yarmouth in July.

Home Counties Master Printers.

Prominent Speakers attend the Annual Gatherings of the Alliance in London.

The Home Counties Master Printers' Alliance successfully held its annual meeting on Monday, when representatives from throughout the area attended in good numbers at the Holborn Restaurant. At two business sessions, with a luncheon between, prominent printers took part, and many matters of trade interest were discussed.

The Annual Meeting.

At the morning session, held in the Queen's Room, the retiring president, Mr. A. le Pine Strange, occupied the chair, and was supported by Mr. Oscar Viney and the secretary, Mr. Percy D. Michael.

In opening the meeting the chairman conveyed apologies for absence on the part of Mr. W. G. Wykes (president of the Federation), who was prevented from attending by important civic business, Lieut.-Colonel W. H. Barrell, O.B.E., Mr. David Greenhill, Mr. Alfred Bennett, and others.

The meeting approved the sending of a telegram conveying greetings and good wishes to the South-Western Alliance, meeting at Bristol.

The Year's Work.

The sixth annual report (read by the secretary) contained a record of very useful and necessary work undertaken on behalf of the membership. Statement was made that the condition of trade appeared to be steadily improving, and that this was accounted for by members to the extension of the period of wage stabilisation. Reference was made to the estimating campaign, carried through by the ex-president, Mr. S. F. Oxley, which had made such an impression on the Federation as to cause its extension to the whole of the other Alliance areas, and members were reminded that this was the topic that filled the largest part of the Federation Cost Congress held in May at Norwich. An important feature of the year's work was that Mr. Strange's period of office was marked by the holding of meetings in different parts of the area; in certain cases group meetings; in others special meetings of the larger associations, the meetings being in three instances preceded by calls on the printers in the districts by the secretary of the Alliance and Mr. L. J. Cumner (Federation organising official). Mention was also made of the fact that the very interesting conference held on April 28th, 1924, between the Council of the Home Counties and South-Eastern Group of the T.A. and the Executive Committee of the Alliance, and it was now possible to report the formation of several District Committees. Amongst other points mentioned were efforts made on behalf of technical education in the area; growing appreciation of the advantages afforded by the arrangement made with the Midland Employers' Mutual Assurance, Ltd., for insuring at a very low rate against Workmens' Compensation and Employers' Liability risks; the assistance of the Alliance in connection with the Federation Collective Advertising Scheme; and the good service of individual members during the year, especially Mr. Hudson, Mr. Potts, and the president, Mr. A. le Pine Strange. The report was adopted *nem. con.*

In the absence of the treasurer, Mr. Greenhill, the financial statement was presented by the chairman, who also read a letter from Mr. Greenhill discussing points of financial interest, and incidentally paying a high tribute to the services of Mr. Michael as secretary. The account and balance sheet showed a healthy state of affairs, and, after a little discussion, were approved.

On the motion of Mr. Jenkins, a hearty vote of thanks was passed to the officers and members of the Alliance who had served in various capacities during the year.

The president, in returning thanks, spoke of the good work done by many representatives of the Alliance, and particularly that of the secretary, to whom he referred as "a tower of strength."

New Officers Elected.

It had been hoped that Lieut.-Col. W. H. Barrell, of Portsmouth, would have succeeded to the presidential chair, but he, acting under medical instructions, had had to decline the office. A resolution was passed expressing the hope that his health would soon be thoroughly re established.

As officers for the ensuing year, the following were elected:—President, Mr. H. H. Potts; senior vice-president, Mr. Oscar V. Viney; junior vice-president, Mr. L. B. Mackay; treasurer, Mr. David Greenhill; auditors, Messrs. A. C. Roberts, Wright and Co.

Mr. Strange vacated the chair to Mr. Potts on the latter's election to the presidency.

It was agreed that the subscription remain as last year, and that twenty guineas be paid to the Printers' Pension Corporation.

At this point the chairman read, with an expression of satisfaction, a telegram just received conveying "fraternal greetings" from the Home Counties Group of the Typographical Association.

Before closing the morning session, the chairman made some suggestions for arranging, during his year of office, for the holding of an educative congress for the benefit of sons of master printers. A short discussion followed, the meeting showing hearty approval of the general principle of the suggestion.

The Luncheon.

Luncheon followed in the Phœnix Room, presided over by the retiring president, Mr. A. le Pine Strange, amongst others present being Lieut.-Col. H. Rivers Fletcher, O.B.E. (past president of the Federation and chairman of the Federation Labour Committee), Mr. Alfred Langley (president, L.M.P.A.), Mr. R. A. Austen-Leigh (past president of the Federation), Mr. A. E. Goodwin (secretary of the Federation), Mr. Wm. Whyte (secretary, L.M.P.A.), Mr. H. H. Potts, Mr. Oscar V. Viney, Mr. S. F. Oxley, Col. Roy Truscott, Mr. J. Dent and Mr. F. Dangerfield.

The toast of "The Federation of Master Printers" was proposed by Mr. Potts, who spoke with admiration of the unselfishness shown by many of those who devoted much time, and travelled long distances, to serve the Federation, the work of which was essential to the well-being of the printing trade, which had so many difficulties peculiar to itself.

Mr. Goodwin, in responding, said that no Alliance in the country had supported the Federation with more loyalty than had the Home Counties Alliance. The question had been asked: "What does the Federation do for the small printer"? He (Mr. Goodwin) could give a very illuminating address on the subject of "What the small printer does for the Federation." Of this they had an outstanding example in Mr. Potts. Mr. Goodwin proceeded to refer to the good relationships existing with labour, to the successful starting of the Collective Advertising Campaign—which, he said, had drawn forth many expressions of appreciation; and to the development of the Costing movement, which owed something to the initiative of this Alliance in respect of its campaign for more accurate estimating. Encouraged by support such as that given by the Home Counties Alliance, those in responsible posts in the Federation could go forward with confidence to face the problems which awaited them in the near future.

Mr. Alfred Langley, in proposing "The Home Counties Master Printers' Alliance," made some very amusing references to the competition between London and provincial printers, and proceeded to thank the Home Counties Alliance on behalf of the L.M.P.A. for the support accorded in the recent crisis. He emphasised the necessity that members should think nationally, so that the Federation might be able to legislate for the complete control of the industry, right from production to consumption.

Response was made by Mr. Strange, who intimated that the Alliance was carrying forward its work in connection with operational times, and he referred to a volume about to be issued which would tabulate a large number of actual times taken by printers, and should be very useful as a work of reference.

The toast of "The Guests" was proposed by Mr. Austen-Leigh in a speech which well sustained his reputation as a wit, his humorous references to Col. Fletcher and Mr. Whyte, who were to reply to this toast, being greatly enjoyed.

Col. Fletcher, in response, had very appreciative references to make to past happy associations with Mr. Austen-Leigh in the work of the Federation. In emphasising the need for the support of all the Alliances, he spoke highly of the assistance rendered by the representatives of the Home Counties Alliance.

Mr. Whyte's speech was another that aroused repeated laughter by humorous story and allusion. He took the opportunity to refer very appreciatively to Mr. Austen-Leigh's work during his term of office as president of the L.M.P.A., and also spoke in cordial terms of the hospitality shown by the Home Counties Alliance.

The toast of "The Chairman" was proposed by Mr. Dangerfield, and a brief response from Mr. Strange brought the luncheon to an end.

Technical Education and the J.I.C.

The new president, Mr. Potts, occupied the chair on the resumption of business in the Queen's Room, when the subjects for consideration were technical education and J.I.C. District Committees in the area of the Alliance, followed by a review and forecast of the labour position.

Mr. Oxley was the first to be called upon, and spoke in regard to the southern area of the Bucks and East Berks Association. He told how successful efforts had been made to arrange for the formation of a District Committee for this part of their area, and said that a meeting of the executive would be held next week.

Mr. Jenkins, speaking in regard to the Hertfordshire District Committee, said they intended to form four Sub-Committees, of which two were at present active—at Watford and St. Albans. He had been impressed at their meetings by the fact that they gained increased respect for the other side when they met thus to discuss matters affecting the trade.

Mr. Hewitt told of the starting of a District Committee at Portsmouth, and spoke very highly of the assistance rendered there by Councillor Walter Ward. They had already formed four or five Sub-Committees, and had also made very considerable strides in regard to technical education. The speaker indicated the great potentialities of the J.I.C. movement in furthering technical education in the various areas.

Councillor G. J. Winn (Portsmouth) also dealt with the subject of technical education, and indicated how the J.I.C. Committee, working in conjunction with the local Education Committee, was endeavouring to provide improved opportunities for the training of candidates for the printing trade.

Mr. Viney, representing Aylesbury, spoke in regard to the central area of the Bucks and East Berks Association, and indicated that proceedings had advanced to the point of arranging for a preliminary meeting to be held the following day, when it was hoped to form a J.I.C. District Committee.

Messrs. P. Fisher (Brighton) and F. A. Clements (Chatham) reported upon preliminary efforts made in their respective districts.

Mr. Goodwin was then called upon to speak, and ably summarised the subject of J.I.C. development. He laid stress on the value of the District Committees, all of which, he said, were doing really useful work. The J.I.C. had created a volume of good will and knowledge of one another that was extremely helpful. He told also of considerable success it had achieved in the advancement of technical education. He said there would be another J.I.C. Convention in connection with the Printing Exhibition, on May 20th, when there would be addresses by the chairmen of the various J.I.C. Committees, explaining what had been accomplished and indicating the problems for the future. The Convention would be open to all members of the trade, and he urged all his hearers to endeavour to be present.

The last item on the agenda concerned the labour position, and this was introduced by Col. Fletcher, who, after briefly referring to the past, dealt in very informative fashion with the various problems with which the trade is at present faced or is likely to be faced in the near future.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

G. T. FOULIS, LTD. (publishers, etc. London).—Particulars filed of £1,500 debentures authorised March 28th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £1,000.

FLEETWAY PRESS, LTD.—Satisfaction in full on October 31st, of charge dated March 20th, 1924, securing £5,000. (Notice filed April 9th, 1925).

FLEETWAY PRESS, LTD.—Debenture (to rank as a third charge), dated April 3rd, to secure £10,000, charged on benefit of an agreement dated March 19th, 1925, and the company's other property, present and future, including uncalled capital (if any). Holder: W. Harrison, Tusmore Lodge, Alexander-road, Watford.

JAMES HUNT, LTD. (printers, wholesale stationers, etc.).—Deposit on March 26th, 1925, of deeds of leasehold property, 47, Atlanta-street, and 1, Branksea-street, and works adjoining in Fulham, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

BANKRUPTCIES, etc.

Re EXPRESS MACHINES, LTD., Carlton House, Regent-street, W.—The statement of affairs lodged under the liquidation of this company showed liabilities £966, assets valued at £999, and a total deficiency of £1,966 as regards contributories. Mr. G. D. Pepys, official receiver, reports that the company was promoted in September, 1923, with a nominal capital of £2,000, in £1 shares, and was formed to carry on the business of manufacturers or suppliers of office printing machinery, typewriters, electrical goods and appliances. The principal object of the formation was to exploit certain printing machines manufactured by Dr. Stein and Co. The failure and insolvency of the company are attributed to the falling through of arrangements for the amalgamation with another company registered as Orga, Ltd. The official receiver remains in charge of the liquidation.

Re F. G. GREEN AND CO., LTD.—The report of Mr. J. B. Thompson, official receiver and liquidator, upon the affairs and liquidation of this company, which carried on business at 16, Southwark-street, S.E., has been issued to the creditors and shareholders. The accounts filed under the liquidation show unsecured debts £2,127, and debenture claims £1,283; assets valued at £187, and a deficiency of £3,925 with regard to contributories, the issued capital being 702 ordinary shares of £1 each. The company was registered as a

Digitized by Google

private company on October 23rd, 1922, with a nominal capital of £1,000, divided into shares of £1 each, its objects being to acquire and take over as a going concern the business carried on by F. G. Green as paper merchant, under the style of F. G. Green and Co. It was in October, 1924, that proceedings were commenced by creditors against the company, and in view thereof A. Green, who held a debenture, appointed F. G. Green receiver on his behalf on November 29th, 1924. The statement of affairs, which is made up as at the date of the receiver's appointment, shows unsecured liabilities £2,127 8s. 3d., which are mainly in respect of goods supplied; in addition there are loans on debentures £1,283 6s. 6d., making the total liabilities £3,410 14s. 9d. The assets are estimated to produce £187 3s. 10d., which will be insufficient to meet the claim of the debenture holder. There is no prospect of funds becoming available in the liquidation for distribution amongst the unsecured creditors. The failure of the company is attributed by F. G. Green to insufficient capital and depression in the paper trade. In the opinion of the official receiver the failure is due to mismanagement.

Re Samson (London), Ltd.—Under the compulsory liquidation of this company, which carried on business at 120, Cheapside, E.C., accounts have been lodged showing unsecured creditors £1,733, and debenture holders' claims £600; assets valued at £581, and a deficiency of £1,755, with regard to contributories, the issued capital being 23 ordinary shares of £1 per share. Mr. G. Digby Pepys, official receiver and liquidator, reports that the winding up order was made on December 17th, 1924, upon the petition of a creditor presented to the Court on November 20th, 1924. The company was incorporated as a private company on March 5th, 1924, with a nominal capital of £3,000, divided into 3,000 shares of £1 each. Its objects were to carry on a business of stationers. The first and only directors were Frederick Percy Owens and Cyril Elliott Stewart. They were the signatories to the company's memorandum and articles and were appointed directors by the articles. Ernest Alterskye has acted throughout as secretary of the company. The company was promoted by the directors and Alterskye. Owens states that in January, 1924, he became associated with Stewart and Alterskye by joining the board of the National Mutual Credit Association, Ltd. ("N.M.C.A., Ltd), a debt collecting agency, which had also carried on a stationery business at 120, Cheapside, E.C.2. In March, 1924, N.M.C.A., Ltd., went into liquidation. Owens and Alterskye then jointly purchased the lease of 120, Cheapside, from the liquidator of N.M.C.A., Ltd., and promoted a company to acquire the stock and carry on the stationery business of that concern. At a board meeting on August 2nd, 1924, it was agreed that the company was unable to carry on business or to meet pressing liabilities, and Owens resigned as managing director. It appears that Owens then acted for some weeks as a receiver and manager for a debenture holder, but his appointment is not registered. On August 20th, 1924, as the result of proceedings commenced by the debenture holder in the Chancery Division of the High Court, Mr. G. W. Bending, of 120, Cheapside, was appointed receiver. Mr. Bending, the receiver, has realised the remainder of the company's effects and collected a certain number of book debts. The realisation, after payment of arrears of rent and cost of a distress levied on the company's goods at the shop premises at 25, Walbrook, amounts to £321, and there is no prospect of the debenture charge being paid in full. The receiver has complained of certain irregularities, and has called attention to the fact that certain of the books and records of the company are missing. These matters are being investigated by the official receiver. The failure and insolvency of the company is, in the official receiver's opinion, due to mismanagement and to the fact that it had no proper working capital at the inception of its business.

RECEIVER APPOINTED OR RELEASED.

Johnson Meakin, Ltd. (printers and stationers, etc., Bristol and Plymouth).—F. West, of 2, Courtenay-street, Plymouth, ceased to act as receiver or manager on April 7th, 1925.

General Publishing Syndicate, Ltd.—P. J. Moore, of 29, Claude-road, Barry, was appointed receiver on March 11th, 1925, under powers contained in debentures dated December 17th, 1920.

Personal.

Mr. H. W. Searle was elected president of the Association of Master Printers of West and North-West London at the annual meeting of the Association on Tuesday at the Gwalia Hotel, Upper Woburn-place, W.C.1.

Mr. Alfred Webster, of Messrs. Hepworth and Webster, printers, Church, has been elected president of the Accrington and District Master Printers' Association.

Mr. D. Goodman, of the Leader Press, Kettering, has been elected president of the Northampton Master Printers' Association.

Mr. Peter S. M'Blain, who for over 30 years has been the manager of the case room of Messrs. R. and R. Clark, printers, of Edinburgh, has retired owing to ill-health after 46 years' service. Mr. M'Blain is president of the Edinburgh Printers' Managers and Overseers' Association.

Mr. H. A. Lawrance has been appointed head reader of the *Yorkshire Post* in succession to Mr. A. Smith, who is retiring after nearly 40 years' service.

Mr. J. R. Senior, foreman compositor at the *Huddersfield Examiner* office, completed 70 years' service with that journal on Thursday. Although in his 85th year, Mr. Senior is still engaged at his calling daily. Mr. Senior has been foreman of the composing department at the *Examiner* office for 42 years.

Mr. R. R. Flint, of the foundry department of the *News of the World*, has been presented with a gold watch and a cheque, with a silver cake dish for Mrs. Flint, on resigning the position of assistant superintendent of the Working Men's College at Camden Town, which he has held for nearly 20 years.

Sir Frank Newnes presided at a general meeting of the National Advertising Benevolent Society at Anderton's Hotel, Fleet-street, on Monday night.

The following were elected vice-presidents: Lord Astor, Lord Burnham, Lord Hambleden, Lord Leverhulme, Lord Rothermere, Lord Dewar, Lord Riddell, Sir Eric Geddes, Sir Edward Hulton, Sir William Berry, Sir Herbert Morgan, Sir Frank Newnes, Sir Charles Starmer, Major Astor, M.P., Mr. T. P. O'Connor, M.P., Mr. W. Haddon, Mr. Jeans, and Mr. L. O. Johnson.

Sir Charles Higham, addressing the London Publicity Club on Monday night, urged the value of advertising as a means towards achieving world peace.

Sir William Veno has been chosen as leader of the British delegates to the International Advertising Convention, to be held at Houstan, Texas, next month, and will sail from Liverpool on Saturday next.

The South African delegates to the Imperial Press Conference, which opens at Sydney on September 2nd, will be Mr. B. K. Long (editor of the *Cape Times*), Mr. D. M. Ollemans (managing director of the *Friend* newspapers, Bloemfontein), Mr. U. Sargent (editor of the *Natal Mercury*), and Mr. G. A. L. Green (editor of the *Cape Argus*).

Mr. W. H. Manning who has just retired from the managership of Messrs. W. H. Smith and Son's wholesale house in Newcastle-on-Tyne, was the recipient of a presentation at a complimentary dinner held in that city last week. Mr. Manning, who has served the firm over 40 years, 24 of which has been spent in Newcastle, was accorded a most cordial ovation, and received a notable "send off."

Mr. P. B. Marshall, of the staff of the *Manchester Guardian*, and formerly of the *Aberdeen Journal*, has been appointed managing editor of the *Ceylon Advertiser*.

Dr. Una Garvin, the second daughter of Mr. J. L. Garvin, the editor of the *Observer*, was married at St. Mark's Church, North Audley-street, London, to Dr. John Ledingham, of Chippenham, Wilts.

Mr. J. Leonard Spicer was entertained to dinner on Thursday evening at Odinino's by his fellow members on the council of the Employers' Federation of Envelope Makers and Manufacturing Stationers. This tribute was a recognition of Mr. Spicer's devoted work for two years as president of the Federation.

The engagement is announced between Mr. Gerald Evan Spicer, of Fifield House, St. Albans, Herts, younger son of Sir Evan and Lady Spicer, of Belair, Dulwich, and Miss Mary Cecilia (Molly), only daughter of Lieutenant General Sir Edward and Lady Bethune, of 41, Collingham place, S.W.

Mr. Kent Cooper has been appointed general manager of the Associated Press of America, in succession to Mr. Frederick Roy Martin, who has resigned.

Lamson Paragon Supply.—In giving the reason for the fact that the profits of the Lamson Paragon Supply Co. were the lowest for some years, the chairman (Mr. Alan McLean, M.P.,) stated that they had not been able to reduce the costs to a point commensurate with the lower prices which they were charging. During the past five years they had reduced prices on the average by 50 per cent., and while to day the output of the company's products is considerably in excess of what it was in 1921, the value of the turnover is 40 per cent. less. The profits and turnover for the past six months were more satisfactory than for the preceding period, and a more cheerful view was taken as to the current period.

Northcliffe's Will.—Mr. Justice Tomlin in the Chancery Division on Tuesday, granted leave to the executors under the late Lord Northcliffe's will to pay out certain amounts which in exercise of a very wide discretion given them by the will they had decided were payable. Claims amounting to £378,085 in cases where the auditors felt there could be no doubt had already been paid, and the present application was in regard to further legacies amounting to £140,406, as to which there was small doubt. It was stated that the executors had decided to pay £24,850 to employees who were away during the three years preceding the death of Lord Northcliffe. The order made on Tuesday was subject to certain named charities benefiting under the will being added as parties to the summons, with liberty to be heard if they raised any objection.

Exhibitions of Printing.—A correspondent writes: "It has frequently been said that the printing trade owes a great deal to the principal of the London School of Printing in all that he has done in not only teaching the future craftsmen, but enabling those of riper years to have an opportunity of discussing matters which affect the trade by means of lectures and exhibitions, such as those held at Stationers' Hall and the London School of Printing. It is to be hoped that in the near future the Council of the School will provide facilities for that part of the scheme whereby it was suggested that space would be available for more or less permanent exhibitions of work and machines required by printers to keep themselves abreast of the latest developments which are ever present in the great printing craft. Every printer with a love of his craft should back up these efforts to place British printing right in the forefront."

Lithography without Damping Rollers is now a fact.

Offset Litho is now Cheaper than the Old Process.

Let me quote you.

Sizes up to D/Demy Rotary.
Strictly trade.

NORTH London Master Printers' Association

Helps for the Small Printer.

The topic for the April meeting of this Association was originally arranged for Mr. F. J. Collins of the *Hendon and Finchley Times*, "Some Difficulties of the Small Printer," but as he was unable to attend, Mr. W. R. Cummins, the hon. treasurer of the branch, gave a talk on "Some Suggestions for the Small Printer, or Things I have found Helpful." At the outset of a very interesting address, Mr. Cummins said he hoped the members would not think his talk savoured too much of egotism, for after all the best school was the school of experience and it was entirely lessons he had learned that he wanted to impart to them.

He first paid a high tribute to the value of membership of the Master Printers' Federation; the question had often been asked, he said, was the Printers' Federation of any use to the small printer? To this he replied that, after all, the largest of those members gathered together that evening were small, very small, compared to some of the larger houses who were always willing to pass on their technical knowledge to headquarters, and this in turn was passed on to the smaller houses. At each of the conferences he had attended during the past few years he had come away with some valuable hints that he had put into operation in his own printing works. The same remark applied to the local meetings of the Association. He gave striking instances of this, and quoted a fine address by Mr. Howard Hazell on the need for valuation for purposes of insurance.

He deplored the expression "cheap and quick printing," and said that men who professed to do this worked far into the night, had no time for meeting together, and very little to themselves. If cheap prices would get all the business, why was it that printers who asked cheap prices did not have the largest plants and put all others out of business? The majority of cut-price printers, he ventured to say, had the poorest kind of print shops there were, while those who asked fair prices were constantly adding to their plant and building up their business. The matter of giving estimates was dealt with, and it was pointed out how important it was that when a complex job was quoted, only an approximate price should be given that could be adjusted when charged. Estimates too, it was emphasised, should always be checked by a second person.

Mr. Cummins went on to say that they were often told to "specialise," but his view of that was that it might be all right for firms with big capital who could throw out machines and put others it at will, but with printers like those of the North London Association there was an attachment between them and their customers that there could never be in respect of the head office of a firm. His advice to them was to take any job on which a profit could be made, and make use of the "specialist." Several instances were given of such jobs that had actually been done.

Mr. Cummins also dealt at length with the matter of advertising, and referred with approval to a recent address by Mr. J. D. Wise of S.W. London. He remarked, too, that amongst the most important factors in the business were the employees; he advised that they should be studied. He particularly urged employers not to find fault with any employee in front of other men, but to call him to one side and have a personal talk with him. He advocated profit sharing, his experience being that it made for a staff of happy men. He concluded by saying there was no surer way of building goodwill than with good work, fair prices and reliable delivery. These terms were often quoted at random by many printers, but if they were strictly meant when they were said, and their fulfilment was certain, business would grow, business of the best kind, bound by links of service that could only tend to lasting good.

The address was followed by a helpful discussion, in which Messrs. Mizen, Hunt, Brockman and others took part.

IMPORTS of paper and printed matter into Esthonia during January represented a value of 28,612,000 E. marks. Exports under the same heading were of the value of 47,017,000 E. marks.

Solicitors' Law Stationery Society.

Profit Sharing Results.

A bright and happy throng, the staff of the Solicitors' Law Stationery Society, Ltd., filled the Library at the Memorial Hall on Tuesday evening, the 7th inst., the occasion being the thirteenth annual meeting. It was presided over by Mr. H. Basil Cahusac, the managing director.

The chairman, in opening the meeting, said that though this meeting was the thirteenth, he saw no reason to believe there was anything unlucky about it. He then proceeded to tell his hearers of the events in the life of the Society during the past year, the chief event being the opening of a branch at Glasgow by the purchase of the old-established stationery business of David Robertson and Co., Ltd., a law side which was being steadily developed. This branch, he said, although open for nine months only of the year, had already, in spite of heavy preliminary expenses, made its contribution to the profits of the Society. The story he next unfolded was one of continued success at all branches—with but one exception, and that for no fault of its own. In giving the figures of the general results, he said the turnover for the year had increased by nearly £32,000, and the net profit by nearly £4,000. The dividend had been increased from 17 per cent. to 18 per cent., and that meant that each one of his hearers who had completed the year's service with the Society would receive a bonus of 12 per cent. upon their total remuneration for the year, or about six weeks' money. Warrants for each one's share would be handed to them next day, the total amount so distributed being some £11,000. He concluded his address by giving some details of a pension scheme that was being worked out, and reminded his hearers that it depended upon the whole of the present staff accepting the scheme to bring it into being.

Some questions upon points in the scheme were asked and replied to.

Mr. Ben Clark, chairman of the House Committee, then gave some details of the activities of the Sports Club, and asked for a bigger attendance at the football and cricket matches as an encouragement to the players.

Mr. C. S. Clark, in humorous style, proposed a vote of thanks to the chairman, which was carried with musical honours.

Mr. Cahusac, in reply, thanked them for the reception given to Mr. Clark's vote and assured his hearers of his continued interest in the prosperity of the Society and of the welfare of the staff.

A short musical programme followed and a pleasant evening was concluded by the singing of Auld Lang Syne and the National Anthem.

Straker Bros.' 125th Anniversary.

To commemorate the 125th anniversary of the establishment of the business and the 100th anniversary of its removal from the country to London, Messrs. Straker Bros., Ltd., printers, entertained about 310 of their employees to dinner on Friday night at the Abercorn Rooms, Great Eastern Hotel. Mr. Edgar C. Straker, chairman of the company, presided.

Mr. Charles Barnett, the head of the composing department, proposed the toast of the company.

The chairman, in responding, said that it was 62 years since he first came to his father's office in Billiter-street. The late Frederick Straker was then, in 1863, the sole proprietor of the business. In 1867 his father died. In 1898 he registered the business as a private limited liability company. They rarely had more than two or three days' work in hand, and yet they had never been at a standstill during the whole 62 years.

Mr. T. E. Naylor, M.P., secretary of the London Society of Compositors, responded to the toast of "The Visitors." In the course of his remarks he said the Joint Industrial Council was really a pattern to the rest of the world, for it was at the meetings of that council that they thrashed difficulties out across the table.

AN Advertisement is always working.

"THE PRICE BOOK 1925 FOR THE PRINTING AND ALLIED TRADES," by F. G. Shepard. London: King and Jarrett, Ltd., Holland-street, Blackfriars, S.E.1.

This is the fourth edition of this valuable handbook for the printing and allied trades, and the information it contains has been thoroughly revised and brought up to date, making it a really indispensable volume for the printing office, whether large or small. In fact its 550 pages, or so, are so crowded with information of a practical value that one has to admire the painstaking and the genius of the author in the compiling of such a variety of matter and presenting it to his readers in such a handy manner. The book deals with management and costing, estimating, in its relation to the composing, machine, stereotyping, and other departments, and also with half-tone and colour work, and much useful incidental information is given to help the printer in giving prices for his work. Book work is dealt with at length, and the extra charges for foreign languages, notes, etc., are given in a detailed manner, together with specimens of different styles of setting matter that will be found most useful in casting up copy. In this connection the charges proper to be made for work done on the Linotype, the Monotype, the Ludlow and other composing machines are given in a serviceable and easily understood way. In the section dealing with plant and material the cost of nearly everything required in the printing office is given. Chases, frames, galleys, type, furniture and other working plant are minutely catalogued and priced, and so also is the plant required in the machine-room, the details of the various makers' prices for platens, cylinders, rotaries, offsets and photogravure being given. Process plant, electrotyping and stereotyping outfits are described, and the notes given on the various details are of a most useful character. The book goes on to deal with the work of the warehouse, the bookbinding department, the lithographic shop and the envelope-making section, to all of which Mr. Shepard has given much painstaking attention and supplied information that is of an invaluable character and that will enable the printer to run his works on modern and economical lines. A complete list of watermarks and trade names for papers is given, and this is one of the sections of the book that will be appreciated when a particular customer insists on a certain quality and make, as it may be found at once in the list and stock ordered from the manufacturers. There is also a list of abbreviated trade terms that will be useful. As we have said, Mr. Shepard's book is indispensable to the printer, whether he be master, manager or costing clerk, and it is remarkable value for the five shillings that is charged for it. We can confidently recommend the book to our readers.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

HUNGARY.

A firm in Budapest desires to represent, on a commission basis, British manufacturers of stationery sundries, etc. (Reference No. 425.)

THE NETHERLANDS.

An agent established at Amsterdam is desirous of obtaining the representation in the Netherlands of British manufacturers of stationery, note pads, loose leaf ledgers, etc. (Reference No. 427.)

ARGENTINA.

The Commercial Secretary at Buenos Aires reports that the Argentine Mint are inviting tenders for the supply of paper for printing postage stamps, fiscal and inland revenue values, etc. British firms desiring of quoting for British-made papers of the kind specified can obtain full particulars upon application at the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1. (Reference No. B X. 1709).

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

ACCORDING to a recent question raised in the Commons, it is computed officially that by the time the new mills in Canada and elsewhere have been erected and the extensions to existing plants completed there will be a surplus output of news-print amounting to over 1,000 tons per day.

* * *

OF all the news-print producing countries in the world, Canada is the one in which extensive developments are being made. At present the greatest producer and the largest consumer is the U.S.A ; but pride of place in output will ere long pass over to Canada, whose timber and natural resources present her with an incomparable advantage over her neighbour. Passing over the problem of depletion of source of supply which will ultimately exercise a serious influence on output, the fact remains that U.S.A. pulp mills have long since jeopardised their very existence by ruthless exploitation of timber tracts and have left their erstwhile customers largely dependent upon Canadian producers for news print.

* * *

CANADA is developing her news-print output to meet the ever-increasing U.S.A. demand. In this connection, it is to be noted that the U.S.A. consumption of news print per capita rose from 4 lbs. in 1860 to 50 lbs. in 1924. There are 21,000 newspapers in the States and every succeeding year adds both to the number and the circulation. U.S.A. consumption of news-print advances in much faster ratio than the possible increase in home output. Hence the widening necessity for Canadian pulp and news-print. At present Canada supplies 80 per cent. of the news-print imported into the States and it also so happens that news print constitutes 80 per cent. of Canada's paper output.

* * *

CONSIDER the following figures, which principally relate to statistics for 1923, reliable totals for 1924 not yet being available. The world's output of news print approximated to 4,720,000 tons, of which 1,506,000 tons were produced in U.S.A. and 1,251,541 tons in Canada. Great Britain followed with something in the region of 580,000 tons (of which about 80,000 tons went to Australia). Scandinavian output accounted for 440,000 tons and the remainder belongs to Germany, France and other Continental countries, with Japan producing some 150,000 tons for her home consumption. U.S.A. consumption accounted for 2,800,000 tons, an excess of 1,300,000 over production. Of this import tonnage, Canada contributed over 1,000,000 tons.

* * *

EVERYTHING points to one fact, namely, that Canadian news print and pulp mill extension policy is dictated by U S A extension of demand. A falling off in the States consumption of news-print implies one of two things: either idle Canadian plant or the exploitation of fresh markets.

THE address of Mr. J. A. Maxwell, paper merchant, Manchester, is now 4, St. Mary's Parsonage, Manchester.

Folding Endurance of Papers.

An investigation of the effect of temperature and relative humidity on the folding endurance of papers was recently conducted by Mr. E. O. Reed, chief of tests, Government Printing Office, Washington, and the conclusions to which he came are set forth in the following summary :—

From the results in the tabulations given it is shown that the folding endurance of paper is materially affected by atmospheric changes and such tests must be made under standard uniform conditions maintained within rather narrow limits.

The folding endurance of paper is materially affected in the machine and across machine directions by changes in relative humidity, the effect on the results in the across machine direction not being as great as in the machine direction.

The folding endurance in the across machine direction of most papers is only slightly affected by temperature, while the folding endurance in the machine direction is materially affected by variations in temperature of 10 degs. F. or more, at a relative humidity of 65 per cent. This necessitates the control of temperature within limits of approximately 10 degs. F.

It is also conclusively shown that the atmospheric effect, either of temperature or relative humidity, on paper is not the same on all kinds of paper or even on papers of the same general type. Hence, it is impossible to secure any factor for calculating folding endurance results at one condition to equivalents at another or to a standard condition.

Owing to the wide difference in the effect of atmospheric conditions on folding endurance, the comparative test values of papers cannot be the same at different humidities and temperatures. Therefore, it is paramount that in the selection and adoption of a standard testing condition, this condition must be in harmony with the use and service demanded of paper.

The folding endurance in the machine direction of all papers tested is higher at 65 per cent. relative humidity than that of the across machine direction. The difference between the folding endurance results in the machine and the across machine directions is much greater with all papers at 70 degs. F. and 65 per cent. relative humidity than it is at 70 degs. F. and 45 to 50 per cent. relative humidity. The folding endurance results in the across machine direction at 70 degs. F. and 45 to 50 per cent. relative humidity is greater with some papers than those in the machine direction.

The results obtained in the investigation most strikingly show the necessity of testing paper under a correct and logical atmospheric condition, and contribute further evidence supporting the adoption of 70 to 75 degs. F. and 50 per cent. relative humidity, which condition has been selected by the Government Printing Office Testing Section as in harmony with average indoor atmospheric conditions under which the paper is used.

Furthermore, it is known that many papers in actual service are brittle and crack when folded across the fibres, while the fold parallel to the fibres will be smooth and even. This indicates that at average indoor conditions the machine direction fold (fold across the fibres) is the most important. Yet in the past at 65 per cent. relative humidity the machine direction fold has been practically disregarded, the custom being to specify or test the folding endurance on the across machine direction only, which is always, excepting rare instances, the weaker at 65 per cent. relative humidity. The error of this practice has already been recognised by the Government Printing Office which now specifies minimum average double folds in both the machine and across machine direction at 50 per cent. relative humidity.

Another advantage of the lower humidity for standard testing conditions, especially in connection with folding endurance, is the time required for making the tests. This cannot be considered a logical reason for the adoption of 50 per cent., but together with the other advantages of testing at 50 per cent. should not be overlooked. The length of time required for the making of tests with the folding endurance tester has been considered by some as a disadvantage of the test, however, the time required for making tests at 65 per cent. is more than double the time required at 50 per cent. relative humidity.

Waxed Paper Wrappers.

According to an invention by Mr. C. A. R. Smith and Baker Perkins, Ltd., a wrapper for bread comprises a sheet of paper dry waxed or impregnated throughout with waterproofing material and provided with marginal bands or portions fully waxed or coated with sealing material. Moisture escapes through the dry waxed part of the wrapper. Specification 17597/15 is referred to.

Australian Notes.

Company Dividends — Commonwealth Board Mills Report — Severe Strawboard Competition — Paper Milling Award—Pulp from Australian Timbers —Reported Successful Experiments— Newspaper Developments — Newspaper Office Burnt Out.

(From Our Sydney Correspondent.)

A NUMBER of dividends of paper and stationery firms are announced. The Australasian Paper and Pulp Co., Ltd., have declared a half yearly dividend at the rate of 8 per cent. per annum on all classes of shares. Messrs F. T. Wimble and Co., Ltd., paid an interim dividend in February at the rate of 8 per cent. per annum on the preference shares for the half-year ended December 31st.

THE report of the Commonwealth Board Mills, Ltd., covering the year August 31st, shows a gross profit on the profit and loss account of £8,036, but the writing down of stock reduces this sum to £1,515. The increment taken into account on plant and machinery is £15,389, and that on land and buildings is £6,980. In addition the whole of the reserve is transferred to the credit of profit and loss.

AT a sitting of the Arbitration Court, before Mr. Justice Edmunds, an application was made by the Australian Workers' Union for variations of the paper milling award regarding preference, wages and the settlement of disputes. Mr. Alfred Carter, secretary of the Factory Department of the Union, appeared for that body, while the Cumberland Paper Board Mills and the Australasian Paper and Pulp Co. were also represented.

THE Union asked for a uniform increase in wages of 7s. 6d. a week. The variation regarding wages was ordered to stand over. The parties agreed on the variation in the settlement of disputes and the question of preference was referred to the Registrar, with the parties in attendance. Failing an agreement, the matter is to be dealt with by the Court.

NEWS comes from Grafton concerning experiments made with Australian timbers with a view to specifying their value as raw materal for the papermaker. It is pointed out that many of the eucalypts are too short in fibre, and the result is that when they are used a longer fibred timber is necessary for strengthening the product.

IN 1918 Dr. Earle Page sent to the Technological Museum in Sydney a number of specimens of "scrub" timbers from the extensive Upper Clarence forests, and the laboratory experiments carried out indicated that many of them were suitable for the manufacture of paper pulp.

RECENTLY Mr. W. J. Mulligan, of O.B.X. Creek, Clarence River, forwarded some five tons of timber to the Australian Paper and Pulp Co., Ltd., at Botany, to be subjected to a practical test. The shipment included sassafras (*Doryphora sassafras*) and coachwood (*Ceratopetalum apetalum*). Specimens of the paper manufactured from the timber forwarded to the mills by Mr. Mulligan have been placed at the disposal of the Clarence River County Council. They consist of samples of both white and brown papers of varying weights and textures. The white paper contained 80 per cent. of imported pulp, and the brown paper 20 per cent. of imported pulp, which fact, it is claimed, does not detract from the value of the experiment, inasmuch a it indicates that the timbers of the Upper Clarence are suitable for the purpose of mixing with other pulps to produce an article of high commercial value It is computed that there are 80,000 acres of timberland within a mile of the Upper Clarence watercourses.

THE forty-first annual report of the *Daily Telegraph* Newspaper Co., Ltd., of Sydney, shows a profit for the year ending December 31st, of £18,589, which is reduced to £15,329 after allowing £3,260 for depreciation; the sum of £5,642 is brought forward, but an interim dividend absorbed £10,667. From the £10,304 available, a dividend of 4 per cent. per annum accounted for £7,111 (making 5 per cent. for the year), the balance of £3,191 being carried forward.

IN moving the adoption of the report, the president of the company (Sir John Sulman) spoke of the exceptional difficulties which had to be faced during the year owing to the increasing expenditure and decreasing revenue. Revenue from advertising had decreased by about 10 per cent.

WITH the object of establishing an up to-date printing business and to produce an official Labour weekly newspaper, devoted to the advancement of the interests of trade unionism and the Australian Labour party, a company has been formed in Melbourne to take over the new *Labour Call*. It is intended to erect a new building and to instal additional machinery, also to allot the shares to trade unions or the organisations interested. The new management will be known as the National Progress Newspaper Society, Ltd.

THE Australian *Bystander*, which has been in existence for ten years, has been transferred to the ownership of Messrs. E. T. Kibblewhite and Co., Ltd, printers and publishers, Sydney. While it is not proposed to make immediate radical changes in the journal, a reconstruction of the sections is foreshadowed with special regard to the interests of women.

THE office and plant of the *Byron Bay Record*, a weekly newspaper, have been destroyed by fire. This was the only printing plant in the town and had been established for over 15 years.

Exhibitions

The Seventh International Printing, Stationery and Allied Trades' Exhibition

is one of the outstanding topics of conversation in the trade at the moment, and most of us are now occupied in making arrangements necessary in order that our show shall be as attractive as possible.

Has it struck you, however, that as there are wheels within wheels so there are exhibitions within exhibitions? The Special Exhibition Number of "The British and Colonial Printer and Stationer," on May 7th next, will be an exhibition which will excite a wider interest even than the Exhibition itself in that it will reach our subscribers in the remote corners of the earth who are at too great a distance to actually visit the Royal Agricultural Hall.

Then again it will serve the purpose of informing the trade as to the exhibits which they should see, and will in fact be in every respect a guide for discriminating visitors to the greatest event in Printerdom.

It is essential that your announcement should be prominently displayed in this issue.

Space is now rapidly being booked.

One of our representatives is at your disposal.

"Procrastination is the thief of time."—Let us know to-day when he shall call upon you.

Australian Printers and Tariffs.

Prominent Australian Visitor's Views. Interview with Mr. J. R. Firth, of Sydney.

Mr. J. R. Firth, of P. J. Firth, Ltd., box makers, printers and carton makers, and paper and twine merchants, of Sydney, Australia, who is at present in this country, has strong convictions regarding the tariff policy of the Commonwealth. In the course of an interview with a representative of this journal, Mr. Firth had some interesting observations to make on this subject.

Before proceeding to this matter, it may be useful to recall that Mr. J. R. Firth is the son of Mr. P. J. Firth, the founder of the business, which was established in 1893. The progress of the company has been conspicuous for its enterprise, and branch factories and warehouses have been established at Melbourne, Adelaide, Newcastle and Brisbane. The turnover of the business represents something like a quarter of a million sterling, and the number of people employed runs to nearly 300. Some idea of the extent of the business may be gathered from the fact that the paper boxes manufactured by the concern represent an annual output of £100,000, while 100 million paper bags are sold through the agency of the company throughout Australia every year.

Encouraging Industry.

Mr. Firth mentions the far-seeing policy adopted by the State of New South Wales in the matter of rating. In order to encourage industrial development, there are no taxes on buildings or machinery, while the holding of idle land as a speculation is discouraged by placing a heavy burden of local taxation thereon.

Coming to the subject of the tariff, Mr. Firth mentioned the serious handicap under which box manufacturers have to labour. He regards the people of the Commonwealth as being "stark mad on the subject of protection," no tariff being looked upon as too high. Consequently, box makers have to pay a very heavy duty on their raw material, which, of course, increases the price. Strawboards and chipboards both have to bear prohibitive duties. It is interesting to note in this connection that the raw material used by Mr. Firth's company is 95 per cent. Australian. In some cases so heavy is the tax on the raw material that it is almost impossible to compete with imported goods. A case in point is that of jewel boxes. While the duty on imported jewel boxes is 55 per cent., the duties which the box manufacturer has to pay on his raw material works out at something like 60 per cent.

Another factor which handicaps the Australian manufacturer is the high cost of production, due to the low value of the sovereign, which at the present moment is worth something like 6s. 8d. as compared with the time, preceding the formation of the Commonwealth, when Sydney had no tariff at all. The natural result, of course, is the necessity for paying higher wages, which again contribute to the high cost of production.

A natural consequence of the burden cast upon the manufacturer by the tariff is that he is unable to encourage the use of paper boxes as he would otherwise be able to do. Thus, instead of using these useful cartons, resort is had to paper bags.

At the present moment the basis price of plain unlined strawboard in Australia, 8 to 18 oz., is £17 a ton.

British printing paper is held in high esteem in Australia, Mr. Firth informs us. Practically the whole of the printing paper is supplied from this country, while a fair amount of the writing paper is imported from elsewhere. The price of M.F. or super-calendered printings is now round about 3½d.

The British Preference.

Mr. Firth holds strong views on the question of the preference granted to British goods. Generally he declares the preference to be something of a farce, and is adopted largely for the purpose of increasing the tariff on goods imported from foreign countries. In support of his argument, he points out that the duty on English wrapping paper is 8s. per cwt. and on foreign 10s., although there is not an ounce of English wrapping paper imported into the Commonwealth.

Another example which Mr. Firth produced in support of his argument related to vegetable parchment, of which there is none imported from this country. Yet there is a 10 per cent. duty on the foreign product. Strawboard, again, from England should bear a duty of 2s. per cwt., but none is received from Great Britain, while foreign strawboard is subject to a duty of 3s. 6d. Caps and greaseproof paper also stand in the same category.

With regard to the free admission of newsprint paper and other printing paper from this country, Mr. Firth suggested that this was the only item in the preference list, of which he knew, which was really effective.

Tariff Board Criticised.

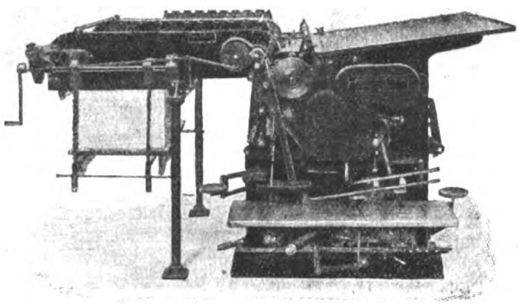
According to Mr. Firth, the operations of the Tariff Board are regarded with considerable suspicion in Australia, and attention has been called in the Australian Senate to certain alleged anomalies. Particular mention was made of toilet paper in rolls being allowed to enter Australia free of duty for one day only, whereas on other days than the one exception, a duty of £10 per ton was charged, or equivalent to 40 per cent. *ad valorem*. The suggestion was made in this connection that the effective dates on which the privileged importation would be permitted were made known to one special importer. This discrimination in favour of one importer was described in the Senate by one of the speakers as unparalleled in the history of British administration.

The same speaker went on to give an example of the extraordinary nature of the decisions of the Tariff Board. Last year, he mentioned, before the Prime Minister (Mr. Bruce) left for Great Britain, the Tariff Board resolved that Canadian kraft wrapping paper should pay a duty of £18 per ton in Queensland and £10 per ton in Sydney. Apparently, according to the same authority, the Prime Minister cancelled the Board's instructions. The Senator further explained that a month or so afterwards the Board decreed that kraft brown wrapping paper should pay a duty of £12 a ton in Brisbane, £10 in Sydney, £11 10s. in Melbourne, £12 10s. in Adelaide and £15 in Perth. This ridiculous decision, it was stated, provoked such unanimous disapproval, that after a month or so it was withdrawn. The Tariff Board, however, a little later decided that any kraft wrapping paper landed in Australia at below £35 a ton c.i.f. and duty paid, should pay a dumping duty of about £2 10s. a ton, bringing the total duty up to £12 10s. a ton. This dumping duty was payable if the paper cost 1s. a ton below the minimum price, but if it cost 1s. a ton above the minimum price, no dumping duty was paid. The result was that importers who were not keen buyers paid no dumping duty, and landed their goods in Sydney or other ports at a very much lower price than they would have paid if they had been keen buyers.

Further other criticisms were made of the Tariff Board, to whose methods of procedure considerable objection was taken.

Printing Organisation.

Mr. Firth mentions an interesting method of printing trade organisation in Brisbane. Here there apparently exists an arrangement between the Association of Master Printers and the Union of the workpeople with a view to securing what are described as equitable prices. The effect of the arrangement is that if a master printer quotes a price lower than what the Association have decided is a fair one, the employees of the defaulting printer are called out on strike!



An action was recently heard in the Courts of Brisbane in which the Master Printers' Association and the Printers' Union were called upon to show cause why their award should not be cancelled, and it was incidentally mentioned by the vice-president of the Master Printers' Association that the Unionists who were on strike at Ipswich were

L&M

OFFSET LITHO ROTARY

WITH PILE DELIVERY.

FEED SIDE OF THE L&M OFFSET LITHO ROTARY WITH PILE DELIVERY.

This is a two-revolution press—a very desirable feature in a machine for colour printing in dead register. The printed sheets are delivered face up on the pile clear of the machine at a convenient height for examination. The plate cylinder is of large diameter, which facilitates perfect inking, damping, and manipulation of the plate. The damping mechanism is placed below the plate cylinder, so that splashing of water does not affect any other part of the machine. The ink distribution is highly efficient. A combination mechanism automatically trips the impression cylinder, inking rollers, ink-ductor, and water-ductor rollers. The machine attendant can fully control the press without leaving his seat.

It is built with Pile Delivery, but can be supplied with an ordinary delivery board if desired.

This Offset Press is built in three sizes:—

Machine No.	Size of Sheet. in. in.	Size of Design. in. in.
No 1	37½ x 52	37 x 52
No. 2	33½ x 45½	33 x 45½
No. 4	25 x 37	24¼ x 37

LINOTYPE & MACHINERY LTD.

9 KINGSWAY, LONDON, W.C.2

paid £1,000 by the Master Printers' Association out of annual subscriptions. It was further admitted that while there was no definite agreement, there was an implication that unionists should not work for printers other than members of the Master Printers' Association.

While there is no result to hand of this particular case, it is on record that Chief Justice McCawlay observed during the hearing: "The wages and conditions stipulated in the agreement may be right, but the arrangement is wrong. Any arrangement which provides for direct action to compel a man to join an employers' association cannot be right."

It is quite obvious, as Mr. Firth observes, that there is here being forged a weapon which may prove somewhat dangerous in the hands of those who use it.

Business Activity.

Business in Australia is exceptionally good this year, thanks to record wheat and wool crops in 1924. From the prosperity arising from these basic industries, other trades in the country are benefiting. The printing and paper industries had a pretty bad time last year, but they are now enjoying better conditions. Competition, however, is very keen.

A distinguishing feature of Australian business men is that they, like the Americans, are not afraid to scrap machinery in order to put in appliances which are more up to date, and which give speedier and more perfect production. The view is that it is better to pay more at the outset and get a fast-running machine than to economise in the first cost, and install machinery which is not quite up to date.

British printing machines are held in favour by Australian printers, and a considerable proportion of those in operation are the products of this country. There are also, of course, a good sprinkling of German and American machines.

During his recent visit to Germany, by the way, Mr. Firth was very much struck by safeguards which had recently been invented for preventing accidents with platen printing machines.

Mr. Firth has a high opinion of the printing skill of the New Zealand craftsmen, and he pointed out that the higher branches of the art were developed in that country before they were developed in Australia.

Our readers are already aware that Mr. Firth is making a tour of Europe with his family, which consists of his wife and four children. They have already been some time in Italy, Switzerland and Germany, and are at present located at Surrey. Their intention is to explore the rural districts of England by motor car, and they have already been delighted by what they have seen. The very fine motor roads in this country have made a deep impression upon the Australian visitors.

Mr. Firth, by the way, has held many prominent positions in the allied trades of Sydney. He was a member of the Paper Control Board during the war. He is chairman of the Cardboard Box Manufacturers' Association in Sydney, and for some years he occupied a position on the executive of the Master Printers' Association. As we have already indicated, the main object of his visit to Europe and America is to investigate the latest developments in box-making machinery, with a view to bringing the factories of his company still further up to date.

Association of Master Printers

OF

WEST AND NORTH-WEST LONDON.

Annual General Meeting.

The twelfth annual general meeting of the above Association was held on Tuesday of last week, at the Gwalia Hotel, Upper Woburn Place, W.C.1, under the chairmanship of Mr. R. F. Hunger (president). There was a good attendance, and the speeches delivered during the evening and the general atmosphere of the gathering indicated complete satisfaction, both with the past year's work and the prospects for the future. Amongst those present were: Mr. Alfred Langley (President, L.M.P.A.), Mr. W. J. Mizen (Secretary, North L.M.P.A.), Mr. A. E. Goodwin (Secretary, Federation of Master Printers), Mr. W. **Whyte** (Secretary, L.M.P.A.). The business part of the proceedings was preceded by a supper, at which the social element was strongly accentuated.

Mr. J. R. Burt (Joint Secretary) read apologies for absence from Messrs. F. Scarsbrook (Treasurer) and N. E. Davis.

Following the reading of the minutes of the eleventh annual general meeting, Mr. Burt, in submitting the Committee's report for 1924-25, mentioned the good that had resulted from the meeting together of members of other district associations with their own. The number of members now stood at 149, against 152 in the previous year; seven new firms had joined during the year and ten had allowed their membership to lapse. The exhibition and specimen exchange had been one of the outstanding events of the year, and their thanks were due to the following gentlemen, amongst others, for contributions in the way of lectures, etc.: Mr. Percy W. Ryde, Mr. G. Poulton, Mr. C. E. Allen, Mr. W. J. Pollock, Mr. F. A. Perry, Mr. H. W. Searle, Mr. P. Crannis, Mr. H. B. Naylor, Mr. J. R. Riddell, and Mr. Howard Hazell. Appreciative reference was also made to the services rendered by the *British and Colonial Printer and Stationer* to the Association during the year, and to Mr. and Mrs. J. E. Emlyn Jones.

Mr. R. F. Hunger, in moving the adoption of the annual report, said that, although the year had not been marked by any great step forward they could look back on it with a considerable amount of satisfaction.

The report was seconded by Mr. S. H. Walton, and unanimously carried.

In the absence of Mr. Scarsbrook, the financial statement for the year was presented by Mr. Goss, who also moved its adoption. In doing so, he placed before the meeting figures that showed the satisfactory state of the Association's funds.

The financial report was then seconded by Mr. Sidders and carried *nem con.*

ELECTION OF OFFICERS.

On the proposition of Mr. Hunger, Mr. H. W. Searle was elected to the presidency for the coming year.

Mr. W. H. Leveridge was re-elected Vice-President.

Mr. F. Scarsbrook was re-elected Treasurer, and Messrs. J. R. Burt and P. G. Crannis Honorary Secretaries.

The representatives of the Association elected to serve on the Council of the L.M.P.A. were Messrs. J. R. Burt, R. F. Hunger and F. A. Perry.

The following were appointed members of the Committee: Messrs. H. W. Barnard, N. E. Davis, S. Goss, S. Heron, J. S. King, H. E. Manfield, A. T. Philp, W. L. Sidders, J. C. Trill and S. H. Walton, with the Past Presidents—Messrs. J. R. Burt, F. Scarsbrook, A. Langley, F. A. Perry, W. J. Pollock, E. W. Wormald, S. Sidders, and R. F. Hunger.

Mr. Goodwin, in moving a vote of thanks to the officers who had served during the present year, said that the report he had just listened to had been one of the most interesting he had heard for some time. Their Association occupied a very warm place in his heart, because he could claim some credit for the starting of it. At the time the Association was started, twelve years ago, he received from the members cordial support on the question of costing. At that time costing was regarded as a revolutionary idea, but no one to-day desired to go back to the old days. Mr. Goodwin referred to the fine work done by Mr. Burt, and said that the Association had been served by a remarkable line of Presidents. Useful work had also been done by other members of the Association. Mr. Goodwin then went on to review the work of the Federation during the past year and, in concluding, referred to the close watch that is being kept on matters likely to affect printers, amongst these being the postal question and the rating of machinery.

Mr. Whyte next addressed the meeting in a witty and breezy speech, in which he paid a tribute to Mr. Langley and others for their work during the past year.

Mr. Burt, in replying, referred to the assistance he had received from Mr. Crannis (Joint Secretary), and then spoke of the necessity of the printer seeking higher craft ideals. This had been one of the Association's aims, and in this direction he thought it had met with a considerable amount of success.

Mr. Hunger also suitably replied.

Mr. Langley appealed for the unqualified support of master printers to their own district Associations.

A vote of thanks to Mr. Hunger for his duties in the chair, moved by Mr. W. J. Pollock, was very cordially adopted.

Wrapping of Bread.

A reference recently to the Public Control Committee of the London County Council was "to consider and report what steps, if any, should be taken to require bread, when sold or delivered to the public, to be wrapped in suitable paper."

After inquiry, the committee say: "We have given the matter the fullest consideration in all its bearings, and while we fully appreciate the cogency of the various reasons urged in favour of the proposal to secure the wrapping of bread, we do not see our way at the present time, in view of all the circumstances, to recommend that the Council should take action in the direction suggested in the reference."

Trade Notes.

Sir Ernest Benn (Benn Brothers, Ltd.) has acquired from the Hon. Ralph Shirley the controlling interest in Wm. Rider and Son, Ltd., publishers of the *Timber Trades Journal* and numerous subsidiary publications.

Damage amounting to £400 is reported to have been caused by a fire which occurred last week in the Govan Printing Works, 851, Govan-road, Glasgow. The outbreak was confined to the machine and case-room.

Under the Bankruptcy Act, 1914, a receiving order has been made in respect of H. Stark, residing at 15, Berkeley road, Coventry, Warwick, and carrying on business under the name or style of H. Robinson and Co., at Type Works, Bangor-street, Coventry, type manufacturer.

Bookbinding Estimates.—An extraordinary disparity between the offers of Aberdeen bookbinders and that of a Huddersfield firm for the obliteration and re-lettering in gold of class numbers of library books was commented upon at a recent meeting of the Aberdeen Library Committee. The tender of Messrs. Riley and Co., Huddersfield, was accepted.

After hurrying to catch a train, Mr. Oliver Smith (48), of Cecil-road, Harlesden, employed in the printing works of Messrs. J. Lyons and Co., died on the platform at Willesden Junction on Monday.

The death took place at his residence, Bo'ness, on Saturday, of Mr. W. W. Broome, printer and publisher of the *Bo'ness Journal*.

Stereotypers' Overseers Monthly Meeting.—The April meeting of the Electrotypers and Stereotypers Managers and Overseers Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C., Mr. A. Chadwell occupying the chair. Except for one or two matters concerning the members and their connection with the trade, little business was down for discussion The secretary (Mr. Bullett) reminded those present of the official visit the Association is making to the Printing Exhibition on May 25th, and appealed to the members for their co-operation in making the event as successful as possible.

At the annual meeting of the Industrial Council of North Wales Printing Trades, held last week, Mr. A. G. Moy, *Advertiser* office, Llandudno, was re-elected as chairman as was Mr. E. Evans, Colwyn Bay, the vice-chairman, and the whole of the committee and other officials.

Newcastle Master Printers.—The annual meeting of the Newcastle Master Printers' Association was held at Newcastle last week. The president, Mr. C. Allan, and Mr. C. F. Bowes gave reports on the work of the Association and of the National Federation, and the following officers were elected: President, Mr. Walter Doig; vice-presidents, Mr. M. F. Reid and Mr. E. B. Ward; hon. secretary, Mr. J. Thornton; hon. treasurer, Mr. C. F. Bowes; and hon. auditor, Mr. T. Dobson.

East Anglian Printers. — The East Anglian Alliance of the Federation of Master Printers held its annual meeting at Norwich last week, when a business meeting was held at the Alliance Offices, Victoria-chambers, followed by luncheon at the Haymarket Restaurant. At the business session Mr. Deyns Page was elected to the presidency of the Alliance in succession to Mr. R. A. Austen-Leigh, who was elected an additional vice-president. The other officers were all re-elected. Col. H. Rivers Fletcher addressed the meeting on labour topics. At the luncheon, at which Mr. R. A. Austen-Leigh was chairman and host, speakers included the Lord Mayor (Dr. Pope), Col. Fletcher, Mr. A. E. Goodwin and Mr. W. T. F. Jarrold.

At the May meeting of the South-West London Master Printers' Association, to be held on Tuesday, May 5th, 6.30 p.m., at Messrs. Arding and Hobbs' Restaurant, Clapham Junction, S.W.11, the principal feature will be an address by Mr. H. D. Keats, of Messrs. Mander Bros., and late of the London School of Printing, who will deal with printers' difficulties in relation to ink.

The Association of Master Printers of East and North-East London is holding a whist drive and bohemian concert at the Church Institute, 27, Romford-road, Stratford, E.15, on Tuesday next, May 5th. Proceedings commence at 7 p.m.

The L.M.P.A. Annual Dinner.

A Distinguished Gathering and Some Excellent Speeches.

As is usual on such occasions, the twenty-third annual dinner of the London Master Printers' Association, held at the Connaught Rooms, on Monday, was a brilliant function, attended by many famous printers, their ladies and friends. Mr. Alfred Langley (president, L.M.P.A.), who was accompanied by Mrs. Langley, presided, and there were about 200 persons in all, amongst those present or accepting invitations being: The Right Hon. Lord Riddell, Sir Ernest Wild, K.C. (Recorder of London), Mr. W. B. Wykes (president, Federation of Master Printers), Brig. Gen. W. Wright Bemrose (vice-chairman, Joint Industrial Council), Mr. and Mrs. R. A. Austen-Leigh, Mr. and Mrs. W. A. Clowes, Major M. Clowes, M.C. and Mrs. Clowes, Mr. and Mrs. E. C. Austen-Leigh, Mr. J. J. Kelther, Lieut. Col. and Mrs. R. F. Truscott, Mr. H. Basil Cahusac, Mr. H. H. Potts (president, Home Counties Alliance), Mr. A. le Pine Strange, Mr. J. D. Wise, Lieut.-Col. B. L. Hooper, Mr. G. Harrison, Mr. H. Harrison, Sir Arthur Roberts, K.B.E. and Lady Roberts, Mr. C. Crabtree, Mr. F. T. Corkett, Major W. I. Burch, Mr. and Mrs. H. C. Bolton, Mr. and Mrs. J. Fry, Mr. and Mrs. C. T. Jacobi, Mr. J. R. Riddell (principal, London School of Printing), Mr. J. Crowlesmith, J.P., Mr. R. B. Simnett (president, South-West Association) and Mrs. Simnett, Mr. G. F. Tomkin (president, East and North-East Association) and Mrs. Tomkin, Mr. H. W. Searle (president, West and North-West Association), Mr. and Mrs. W. J. Mizen, Mr. A. E. Goodwin (secretary, Federation of Master Printers) and Mrs. Goodwin, and Mr. W. Whyte (secretary, London Master Printers' Association).

All the arrangements were made with excellent taste, and the whole of the proceedings were carried through with complete success.

The souvenir menu was delightfully designed and printed, a unique feature being an offset reproduction of a drawing, by Joseph Pike, of St. Paul's Cathedral as seen from the L.M.P.A. headquarters. The printers were Messrs. Waterlow and Sons, Ltd.

The toast of "Literature," which was to have been proposed by Mr. R. A. Austen-Leigh and responded to by Sir Sydney Lee, LL.D., had to be omitted owing to the unavoidable absence through illness of Sir Sidney Lee, and the loyal toasts were followed by that of "The London Master Printers' Association," which was proposed by Mr. W. B. Wykes.

"The London Master Printers' Association."

Mr. Wykes referred to the fact that London had, in recent years, given to the Federation and to the printing craft a number of well known gentlemen eminent not only in the trade but also in the civic life of their great city. He went on to say that the volume of printing turned out from London still enabled them to claim to be the largest printing centre in the world, and, moreover, the quality of the bulk of their work was such that they were able to maintain their position, not only so far as provincial competition was concerned, but in respect of foreign competition also. As evidence of this, he referred to the recent exhibition of British printing held at the London School of Printing, and incidentally he queried why they should stick to the title of the London School of Printing, when it was time that London had a "College" of printing as some provincial technical institutions were termed. After referring to the continued difficulty of keeping their printing works fully occupied, Mr. Wykes spoke of the importance of London to the Federation and acknowledged much assistance received by the Federation from London, also mentioning the fact that London was providing the Federation with its next president, Mr. Howard Hazell. He went on to say that probably Mr. Langley and himself were two of the youngest and, certainly, two of the smallest printers who had ever held their respective offices. They had both determined in entering upon office to do their best to promote good relationship and closer working between the Federation and London. Amongst factors that had tended in that direction he mentioned the closer juxtaposition of the London and Federation staffs in the new offices at Old Bailey; the Collective Advertising Scheme, in which London and the Federation were co-operating; also the recent labour trouble, which had had a beneficial effect in uniting London and the provinces in the endeavour to maintain law and order in their industry. In this connection he paid a tribute to the good work of London members of the Labour Committee, particularly Major Clowes, and also mentioned very appreciatively the assistance rendered by Mr. George Isaacs, Mr. A. E. Holmes and others of their trade union friends. In coupling Mr. Langley's name with the toast, he said he had formed a very high opinion of Mr. Langley's ability and sincerity, and had been struck particularly by the very kind and friendly way in which he always met representatives of the Federation. He would be exceedingly surprised if, in the very near future, London did not nominate Mr. Langley for the office which he (Mr. Wykes) now held. (Applause.)

The chairman, responding, acknowledged that Mr. Wykes had always shown deep appreciation of the way London had endeavoured during the past year to be a source of strength to the Federation. On behalf of the London Alliance, he proceeded to thank Mr. Wykes, also Mr. Howard Hazell (vice-president of the Federation) and the secretary of the Federation, as well as all the various Alliances, for the support they had given to London. Proceeding to refer to the recent dispute in the binding section of the industry, he said they had been able to demonstrate to the whole industrial world that the printing trade could settle its disputes within the four walls of the industry by the combined wisdom of those who sat on both sides of the table. That was an achievement of which the printing trade could well be proud. (Applause.) Their thanks as an Alliance were due to the other Alliances which gave them that demonstration of support. In this connection London had particularly to thank Colonel Fletcher, both panels of the Joint Industrial Council, General Bemrose, Mr. Wykes, Major Maurice Clowes, as well as the members of their own Alliance, notably the periodical houses. It was a demonstration that was so striking that it drew, even from the labour side of the conference, congratulations and appreciation of the wonderful stand London had made. (Applause.)

"The Visitors."

The next toast, that of "The Visitors," was proposed in a typically entertaining speech by Lord Riddell. In coupling with the toast the name of Sir Ernest Wild, he took the opportunity to trace very humorously some supposed connections between the Recorder's presence with them that evening and the fact that the Association had recently taken offices next to the Central Criminal Court, where Sir Ernest Wild exercised his functions with such distinction.

Sir Ernest Wild, replying, said that with regard to the recent controversy that had taken place as to publicity in the Press, he was all on the side of publicity. He believed that with all its dangers—and there were many—the one thing that was essential for the administration of justice was that the Press should be at liberty to report their proceedings. He had always been struck by the tremendous power that they, master printers, possessed. It might be said that a man's library was the index of his soul, and so a nation's reading was the index of its character; and they were the masters of that. It was greatly to the credit of those who had to do with the printing press that they used it for worthy and not for ignoble ends. He was certain that, except as regarded the law of libel, it would not do for the Legislature to attempt to tamper with the printing press. The only way in which it could be regulated, subject to the law of libel, was by means of its own inherent good sense. It must be its own *censor morum*, acting and re-acting with public opinion. (Applause.)

"The Chairman."

The last toast, that of "The Chairman," was proposed by Lieut.-Col. R. F. Truscott, who said that their president had had an eventful and important year of office. He proceeded to refer to the large amount of time Mr. Langley had devoted to the affairs of the Association and the amazing discretion he had shown. He mentioned particularly Mr. Langley's work in connection with the recent labour negotiations, it being largely due to Mr. Langley's activity that the solidarity of London was maintained. He thanked Mr. Langley for the unfailing industry he had shown in connection with the affairs of the Association, and took the opportunity also to mention with appreciation the work of Mr. Whyte and his staff, to whom, he said, they owed a great deal. The toast was received with musical honours, with an extra cheer for Mrs. Langley.

Mr. Langley, in responding, referred to the many kindnesses received during his year of office, which had been made an extremely pleasant one by the loyalty of members of the Alliance, large and small printers. In this connection he thanked the officers of the District Associations, Mr. Whyte and others at headquarters, Major Clowes, the members of the Council, and Mr. J. H. Williams, the treasurer of the L.M.P.A.

Hearty expressions of appreciation were evoked by musical items rendered under the direction of Mr. William Parkyn. These included songs by Miss Doris Vane, by Miss Carrie Herwin and by Mr. Ceredig Walters, together with humorous musical impressions at the piano by Mr. William Parkyn.

Printing Exhibition Challenge Trophy.

The cup presented by the L.M.P.A. for competition between the London District Associations graced the chairman's table throughout the proceedings.

The Typographical Association.

North-Western Group Coming of Age.

This group of the Typographical Association held its 21st annual conference at Caxton Hall, Salford, on Saturday, when there were over 70 delegates and friends present to receive a civic welcome from the Deputy Lord Mayor of Salford (Alderman J. D. McDougall, J.P.) and Alderman W. T. Jackson, J.P., Deputy Lord Mayor of Manchester. There were also present as fraternal delegates Mr. H. Skinner (general secretary) and Mr. A. Bottomley (assistant secretary), Mr. J. W. Lowe (insurance manager of the T.A. Approved Society), and Councillor W. Mellor, J.P. (secretary of the Manchester and Salford Trades Council).

The conference adjourned for luncheon at 1 o'clock and for dinner and a smoking concert at 6 o'clock, which was held at Parker's Cafe, Market-street, Manchester. Among the guests entertained to dinner were Mr. J. A. Scott (*Manchester Guardian*) and Mr. H. A. Bethell, representing the Manchester and Salford Master Printers' Association.

Councillor Mellor gave an inspiring address. He said Manchester was a centre for the industrial revolution in 1868, and it was in this city that the first Trades Union Congress was held, which, to the everlasting credit of the T.A., was convened by Messrs. Nicholson and Wood, officials of the Typographical Association.

After dinner Mr. G. Nelson, J.P., proposed the toast of "The T.A.," which was responded to by Mr. H. Skinner, secretary of the T.A. The "Local Printing Industry" was proposed by Councillor Mellor, J.P., whilst Messrs. J. A. Scott and H. A. Bethell responded. The pleasant relations as between men and masters was emphasised by both the proposers and responders. "The Visitors" was proposed by the group secretary, Mr. H. J. Harvey, J.P., and responded to by Alderman W. T. Jackson, J.P., and Alderman J. P. McDougall, J.P.

The Printing Crafts Guild.

Another successful whist drive and carnival dance in aid of charity was held in the College of Technology, Manchester, whem two hundred members and friends spent a pleasant evening dancing to the strains of Mr. Sutton's Lancashire Dance Band. The prize winners at the whist drive were:—Gentlemen: 1, Mrs. Butler, 92; 2, Miss Edith V. Hughes, 91; (last six hands), Mr. J. W. Mason, 50. Ladies: 1, Miss Nora Cain, 99; 2, Mrs. Millward, 92; (last six hands), Miss Edith Hadfield. Spot dance: Mr. and Mrs. Fielding.

WEE MAC.

Mr. J. Leonard Spicer.

Complimentary Dinner in London.

After two years as president of the Employers' Federation of Envelope Makers and Manufacturing Stationers, Mr. J. Leonard Spicer was at the annual general meeting in March succeeded by Mr. T. Owen Jacobsen, J.P., and in order to express their appreciation of Mr. Spicer's services during his two years of office, members of the Council of the Federation assembled at Oddenino's Imperial Resturant on April 16th.

The proceedings were entirely informal, and after the toast of "The King" had been honoured, the new president (Mr. T. Owen Jacobsen, J.P.), proposed the health of Mr. Spicer. He mentioned that they had

Mr. J. Leonard Spicer.

assembled that night to do honour to a Spicer who had served them so well and so unselfishly. All his great experience and ability had been freely at the service of each member of the Federation, and also to firms who had appointed themselves honorary members when they wanted help.

Mr. Hawdon also spoke in praise of Mr. Spicer's presidency.

Mr. James Gallie referred to the strong link which bound the Scottish members together.

Mr. J. Leonard Spicer, in reply to the toast said he found it difficult to express his feelings on such an occasion. He had played but a humble part during the past two years in furthering and fostering the Federation. He went on to pay tribute to the memory of the late Mr. Henry Godfrey

---

The Right Honourable the Lord Riddell will formally open, on May 5th, the Northern Home, Northcliffe, which is situated at Filey, Yorks, and which has been erected by the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. This convalescent home is to serve the interests of members in the Northern half of the country, and is a counterpart of the Alfred Evans' institution at Carshalton, which provides for members in the South of England.

An exhibition of posters and drawings illustrative of Advertising Art will be held in the Palace of Arts, Wembley.

The *Evening Sun* of Melbourne ceased publication on Saturday owing to the high cost of production.

An illustrated article on "Bewick the Wood Engraver," by Selwyn Image, is amongst the contents of the April *Print Collector's Quarterly*.

"William Caxton," by Mr. H. R. Plomer is the title of one of the latest books in the popular "Roadmaker" series published by Leonard Parsons, London (4s. 6d. net).

SALE BY AUCTION.

By Order of the Sheriff.

17, Tudor Street, London, E.C.4.

HIGHLY IMPORTANT SALE of the VALUABLE MAGAZINE PRINTING PLANT AND MACHINERY, including:—

Quantity of Stores including Chemicals, French Glue, Black and Coloured Letterpress ink, Emery cloth new buffers and other effects which will be sold by auction by Messrs.

H. W. SMITH & MOON,

at the premises as above on Thursday, April 30th, at Twelve o'clock precisely. On view the day prior.

Catalogues from the Auction and Estate Offices, 6, Great James Street, Bedford Row, London, W.C.1.

Bookbinders Warned.—"Poverty exists on every hand," says Mr. W. F. Johnston, secretary of the International Brotherhood of Bookbinders and Bindery Women Workers, Toronto, Canada, in a letter to Mr. T. G. Newland, secretary of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. Conditions, says Mr. Johnston, are deplorable and workers in Britain should be warned lest they become the dupes of the various concerns luring them out under false pretences.

The heavy cost of publishing verbatim the evidence given before Royal Commissions is referred to by the Comptroller and Auditor-General in his report on Government trading for the year ending March 31st, 1924, issued on Tuesday.

On the eve of a conference and their annual dinner at the Holborn Restaurant, the members of the National Federation of Retail Newsagents, Bookbinders, and Stationers on Monday evening inaugurated new headquarters at 72, Fleet-street.

The death has occurred, through a motor car accident, of Mr. Thomas Scott, formerly managing director of Messrs. Thos. Scott and Co., Ltd., printers, Ellison-place, Newcastle-upon-Tyne.

Only three weeks after he had relinquished business, owing to ill health, Mr. William John Payne passed away at his residence, Torquay, on Monday, at the age of 46. For years he carried on business as a printer and stationer at 19, Market-street.

Mr. Thomas Nettleton, whose death has occurred at Leeds, had been for some years a member of the composing-room staff of the *Yorkshire Post*, and was formerly employed at Messrs. F. R. Spark and Son, printers, Leeds. He was the eldest son of Mr. J. E. Nettleton, the treasurer and assistant secretary of the Leeds branch of the Typographical Association.

The late Mr. Martin Harry Clark (42), of High-street, Croydon, printer and stationer, left £17,336 (net personalty £10,064).

A Barcelona firm of commission agents is desirous of securing the representation of a British manufacturer and exporter of wallpaper. (Repetition of D.O.T. Reference No. 219.) (Reference No. 378).

The Seventh International.

LITTLE more than a week separates us from the Seventh International Printing, Stationery and Allied Trades' Exhibition at the Royal Agricultural Hall, and our next issue, of May 7th, will be a special enlarged number dealing with that event. Our pages will then be found to be more than usually full of interesting technical and current matter. Mr. Wm. Gamble, whose acquaintance with recent developments in the printing art is unsurpassed, will trace its recent history. A large section is to be devoted to the Exhibition itself, and leading exhibits which should receive attention will be described. A special welcome awaits visitors at our own stand, 51 and 52 in the Gallery. Here there will be facilities for writing, with the use of the telephone and opportunities for resting, the necessity for which a large exhibition imposes. Copies of the *British and Colonial Printer and Stationer* Special Exhibition Number will be available, and there will be a useful selection of technical books dealing with the allied trades. Subsequent events in connection with the Exhibition will be dealt with as the event proceeds. It is hoped that an impetus to the printing and allied industry will result from the display at Islington and we are pleased to be able to make a contribution to the effort.

* * *

Bread Wrapping.

IT seems rather extraordinary that so enlightened a body as the Public Control Committee of the London County Council cannot see its way to recommend the Council to insist upon the wrapping of bread in paper. It is surely high time that hygienic methods of this kind should be generally enforced in order to ensure the health of the public. In the report which the Public Control Committee present on the subject they give no reasons whatever as to the attitude they have adopted. In fact, what they do say is rather in favour of the proposals which have been put before them, because they admit the cogency of the various reasons urged. It would be interesting to know, therefore, why they took such a retrograde step on a matter of prime importance.

Training Executives for the Trade.

Once again the London School of Printing anticipates the needs of the great industry which it represents.

Arrangements are now complete whereby scholarships may be instituted to prepare men to fill managerial positions by means of a whole-time training. The scholarships will be open for competition, the conditions being that candidates must be of British nationality and are serving or have served an apprenticeship in some section of the printing industry. It is expected that the trade associations and firms connected with the printing and kindred trades will assist by providing maintenance allowances during the training period.

To the Winterbottom Book Cloth Co., Ltd., is due the credit of instituting the first scholarship, to the value of £100 per year. Competition for this scholarship is open to those engaged in the binding trades.

Applications for particulars and date of competition should be made to the Principal of the London School of Printing, 61, Stamford-street, London, S.E.1.

Caxton Home, Limpsfield.

The members of the Sick Fund Union gave their twenty-ninth annual concert on behalf of the above Institution at the London and Brighton Hotel, Peckham, on Saturday last, under the auspices of the South London Caxton Musical Society. Messrs. W. Vandy (chairman of the Fund), Geo. Chapman (trustee), and R. W. Lee (secretary), were the chairmen, supported by the Right Hon. C. W. Bowerman, M.P., and a crowded house.

The programme provided by Mr. Will White (musical director), was of the usual delightful character, the various items being well rendered and much applauded.

The chairman's "plate" was announced at thirty guineas, with several further donations to come along, and hearty votes of thanks were accorded.

This concert brought to a close the Caxton Musical Society's winter season, which has been one of the most successful in its over thirty years' work for the Caxton Home. The proceeds this year are being given to the New Wing Fund, and it is proposed to place £200 to its credit with a view to naming the first bed in the wing a "Mrs. C. W. Bowerman Bed," in honour of the treasurer of the Home.

Ten Years After!

Printers Involved in Peculiar Action.

The important question whether a declaration of liability could be made after ten years was decided in the Southwark County Court by Judge Sir Thomas Granger on Thursday. Mr. William Fisher asked for an award under the Workmen's Compensation Act, and a declaration of liability, against Messrs. McCorquodale and Co., Ltd, printers and stationers, of "The Armoury," 60-68, St. Thomas's-street, S.E.1.

Mr. Ferguson, for the applicant, said that on October 8th, 1915, the applicant was in the employ of the respondents as a compositor. On that day he was carrying a chase with the type to a lift, when it slipped. In preventing it from falling he squashed his left hand, so causing a permanent stiffness. As the result, he could not do a compositor's work. After some time the respondents took him back as a reader, and he remained as such until September 27th, 1924, when he was, without reason, dismissed. He was out of work until November 10th, when he managed to get work by being employed by Kellys Directories until December 5th. He then fell out of work until January 19th, when he was employed by His Majesty's Stationery Offices at Harrow, where he still remained. He was claiming wages for the two periods he was out of work.

The applicant gave evidence, and said he was 65 years of age. He had been a compositor since he was 21, having served his appreticeship; he was a jobbing compositor. Before the accident he had been in the respondent's employ for 12 to 14 years. After the accident he went to the Hackney Infirmary to about December 15th, the respondents paying his full wages. He explained to the Judge that the left hand should be used to hold the compositor's stick, and his fingers being stiff, he could not do so. It was true that as a reader he earned four or five shillings more, but during his periods of unemployment his scope of ability was narrowed, as he could only say he was a reader and not a reader and compositor. His wages were now £4 14s. a week, the trade union rate.

In cross examination, the applicant admitted that he had received unemployment benefit from the Labour Exchange during his unemployment.

Mr. Ferguson then said he would call medical evidence to prove the injury, but Judge Granger said it was not necessary as the injury was admitted. Mr. Ferguson then said he thought he must withdraw the claim for wages, as he clearly could not claim wages because applicant had received unemployment benefit.

Mr. Dickens, counsel for the respondents, submitted that really there was no case to answer. The claim for wages had been withdrawn, and it only remained whether a declaration of liability should be granted. He contended that it could not be, and ventured to say that no Court had ever granted one after ten years.

Mr. Ferguson then read an authority which stated that it could be granted after any time.

Judge Sir Thomas Granger therefore entered a declaration of liability for the applicant, and costs.

Trade Union Matters.

The annual conference of the Administrative Council of the Printing and Kindred Trades Federation will be held at Bristol on May 13th. The Council have nominated Mr. C. W. Bowerman for the presidency, Mr. A. E. Holmes for the secretaryship, Mr. H. Skinner (secretary of the Typographical Association) as vice-president, and Mr. J. D. French (president of the Typographical Association) for the Executive Council.

Regrading.—The amended scheme of the regrading of branches of the Typographical Association will be submitted this week to the employers for consideration.

T.A. Levy.—The Executive Council of the Typographical Association announce that in accordance with the rule which provides that when the half-yearly balance-sheet shows a smaller sum than £6 per member on the books a levy of 1s. per quarter shall be made on fully employed members, that levy is to be enforced for the quarter ending March 31st last.

Leeds Superannuation Scheme.—The proposal of the Leeds branch of the Typographical Association to establish a local superannuation scheme has been placed before the Executive Council of the Association, which has given sanction for its establishment. The scheme has accordingly been put into operation as from the beginning of this month. Members between the ages of 40 and 60 are compulsorily brought into the scheme, but outside of these ages entrance is voluntary. The contributions vary from 6d. for members at 40 to 45 to 2s. per week for members of 55 to 60 years of age. The scheme allows for a pension of 15s. per week payable at the age of 60, after a contributory period of at least five years. The scheme is purely local and additional to the superannuation scheme of the Typographical Association.

Printers' Readers' Wages.—The secretary of the Provincial Guild of Printers' Readers has forwarded to the Executive Council of the Typographical Association a resolution asking for the co operation of the Association in obtaining certain minimum rates of wages for readers. The Executive Council have decided that the question is one to be determined at a delegate meeting of the Association.

Three armed robbers held up the offices of the Dublin Typographical Association on Friday and escaped with £200.

Lancashire Printing.—The town of Wigan is to open at the end of this month an exhibition of books printed in Lancashire up to the year 1800. To accompany it a bibliography of all such books has been compiled by the Borough Librarian, Mr. A. J. Hawkes, who has succeeded in finding references to 1055 works done by Lancashire printers beginning with the secret Birchley Hall press of the early seventeenth century and ending with 1800.

At an inquest held at Yeovil on Friday on Mr. Sidney Waterman, aged 53, head of a Stoke-under-Ham firm of cardboard box manufacturers and one of the best known men in the district, who was found hanging from a beam in the summer-house of his home the previous day by his son, a verdict of suicide while temporarily insane was returned.

Personal.

Viscount and Viscountess Burnham, on Tuesday night, entertained the officials and members of the National Federation of Retail Newsagents, with their wives and daughters —over 300 guests in all—to a reception in the Pillar Hall of the offices of the *Daily Telegraph*.

Mr. F. L. Armstrong, general secretary of the Newspaper Society, is arranging for the broadcasting of the Prime Minister's speech, which will be delivered at the forthcoming dinner of the Society on May 5th.

Mr. W. Howard Hazell, J.P., and Mr. T. E. Naylor, J.P, M.P., have again been re-elected chairman and vice-chairman respectively of the London School of Printing.

Mr. W. R. Codling, C.V.O., C.B.E. (H.M. Stationery Office), Mr. Ewan S. Agnew (Messrs. Bradbury Agnew), Mr. H. Murch (*Daily News*), Capt. J. E. Fraser (Amalgamated Press, Ltd.), and Mr. E. A Hobbs (*Daily Express*) have been nominated on the Governing Body.

Sir John Le Sage, late managing editor, *Daily Telegraph*, was the recipient of many messages of congratulation last Thursday on the occasion of his 88th birthday.

Alderman Sir John Baddeley has been reappointed a representative of the Corporation on the Metropolitan Water Board for the next three years.

Printers' Managers and Overseers Association.

Manchester and District Centre

There was a good attendance at the Mitre Hotel, Manchester, when President Frank Scouler occupied the chair at the April meeting.

Minutes, roll call and correspondence being dealt with, regret was expressed that there were no special railway facilities for the Printing Exhibition to be held May 16th to 30th.

In respect of the national conference, Mr. Frank Scouler (president) and Mr. F. J. Hughes (secretary) were appointed delegates representing Manchester.

Owing to the death of ex-President Fred E. Robinson, the vacancy on the Council was filled by the election of Mr. W. H. Connah.

In connection with the Liverpool Coming-of-Age, Mr. Frank Scouler (president) and Mr. F. J. Hughes (secretary) were deputed to visit Liverpool on May 9th, when Mr. James F. Poole is to be the recipient of tangible recognition of his twenty-one years' service as honorary secretary.

Afterwards Mr. F. J. Hughes read a short paper on "Superannuation Fund," Mr. J. H. Nuttall adding another idea, and contributions to the discussion being made by Messrs. E. C. Balls, A. Helliwell, W. H. Connah, C. R. Mason, J. Winstanley, Geo. H. Rider and others.

Wee Mac.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. A boon to all users of Gold Leaf, Foils, &c.

GOLD LEAF
In all shades & sizes.

RIBBON GOLD LEAF
from ½in to 3½in. wide,
WHITE TRANSFER BLOCKING FOIL
in two qualities.
"FEST" specially prepared for fine work.

METAL LEAF,
ALUMINIUM LEAF
in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

BRONZE POWDERS
60 different shades & qualities in stock.

BLOCKING POWDERS.

EGG ALBUMEN
in Flake and Powder.

GLUE (Best Scotch)
and other brands in stock.

CELLULOID GOLD.

SILVER LEAF.
&c., &c.

The Bookbinder

Modern Book Production and its Future Aspects.

By C. L. GREY.

Article II.—Concluding Operations, and a Forecast.

Now to prepare work for the rounding and backing machine. Should the firm not possess a lining machine (which machines, I believe, have been unprocurable for some time past), the books must be first lined. Here it is necessary to use a flexible and slow drying glue to prevent books getting too hard for the rounder and backer, especially work done over night. The rounding and backing machine has stood its ground for practically 25 years without any radical improvement and without a rival. One cannot claim that the work done by it is better than that produced by the star foot treadle backing machine, but it is nearly as good, and certainly good enough for all ordinary purposes. French sewn work goes through best, but all work has to go through it.

Should a lining machine be included in the plant, the books before backing are just glued up and turned to dry. The cheapest books can be just tipped up with glue. The lining machine is coupled to the rounder and backer. As the operator takes a book out of the backer he places it in a slot along which it travels and comes out at the other end first and second lined. The machine is very efficient and reliable; in fact, I know of machines that have been running for ten years with no upkeep expense at all worth mentioning.

After drying, the books are ready for casing-in. By this time some of the books may have become casualties through torn endpapers during their several handlings. As to how many, this depends on the class of endpaper used. Cheap thin endpapers are the dearest proposition. It has been abundantly proved that a good strong endpaper is a first-class investment. Once start repairing books, and you quickly eat into the profits of a job. The cost of binding each individual repair goes up several hundred per cent, above what it would have cost had it gone through with the run—to say nothing of the effect of scattered stragglers of the job, which all have to be got together again to make up the precious number at the finish.

As to casing-in, there are two types of machines in general use, the Parkside and the Smyth-Horne, both very good. Paste is the general adhesive in use; it is cheap and has a mighty stick once it gets there. With paste the books require a longer time in the presses than when hot glue is used as in hand-casing-in. As to presses, the long line of presses is gradually passing away and a better and more flexible system is taking its place. Nowadays books should receive their pressure in a master press, the books being removed in a matter of a few seconds, *still under pressure*, and wheeled to their allotted position in the packing department. This necessitates more pressboards than hitherto, but one has the benefit of a great number of presses which can be easily transported wherever convenient. Regarding covers or cases of books, the strawboards are cut dead square on rotary knived cutters; a magazine feed can be fitted to these machines for feeding the second cuts (long strips) through.

For the Smyth case-making machine the cloth is cut up into single covers by a Smyth cloth-cutting machine; the corners of the covers are cut in a special adjustable frame. The covers are hand-fed into machine, which runs at 11 cases per minute (maker's speed), but many firms run their machines up to 14 per minute. The case is an excellent product, better than the hand-made cover. As a jobbing machine with runs from say 250 to 5,000, it holds the field.

The Sheridan machine has a clear field for big runs, 5,000 upwards. The latest type runs at 2,000 cases per hour, cloth being fed straight from a prepared roll, and paper hollows also fed from roll. For big runs this machine is a necessity. It is advisable in all magazine-fed machines feeding either strawboards or the made covers, to use boards of not less than 16 oz. weight.

The blocking department is the least progressive of all as far as machinery is concerned. Power presses are many and various. The Colt type of press is the best for ink work in my opinion. Celluloid gold leaf has come to the fore of recent years in place of the old bronze foil. More recent still is the advent of Alchemic gold ink, which is a liquid gold ink applied under great heat and a sharp heavy on and off pressure. This gives the cover an appearance of gold blocking, but of course in appearance or durability cannot compare with gold leaf. The great saving by this method is that no washing up, laying on, or cleaning off is necessary. Good examples of this class of blocking are to be seen on some 6d. cloth editions of books now on sale.

Now as to the general trend of the trade in the future, I am convinced that the shops of the future will be those where printing and binding are done under one roof. Already firms that were solely binders are taking up printing and *vice versa*. The liaison necessary between printer and binder can be obtained only when both are under one roof. Then will the printer recognise his shortcomings from the binder's point of view. To take one point, the margins, front and side lay should be equal all through the job. However good the letterpress printing might be, the job is a failure if the margins vary. But where are the printing firms who can say "Our margins don't vary"? I venture to say very few, and those few will be printers that bind and have seen the error of their ways through bitter experience. The fusion of printing and binding has many other benefits, such as speed of manufacture and economy, to say nothing of the imperfection question.

With regard to the general demand for books, there is in my opinion a great and practically untouched market at our doors. This great section of the book-loving public is debarred from buying on account of price. Books are too dear. At the right price they will sell in their millions. The fact that during the last few months, millions of cloth-bound books have been sold at 6d. in this country proves this fact; futhermore they were in the main not sold through the usual channels of the bookselling trade. New machinery of a revolutionary character has made this possible, and it is my belief that copyright books could be sold say at 7d. and be remunerative to all dealing with them. Sooner or later a combination of finance and live men will bring this to pass, and, despite the difference in money value, the pre-war sevenpenny will come into its own to the benefit of all concerned.

Notes and News.

Prospects Less Hopeful.

Having settled down after the lock-out menace, the bookbinding industry cannot claim to have made much progress as regards the state of trade. The constant promise of an improved volume of business is equally inconstant in its fulfilment. Very few towns can lay claim to a clean sheet as far as unemployment is concerned, and very few houses are able to report maximum output. The immediate outlook is not very hopeful, and already the Easter holidays have played their part in breaking the sequence of continuous progress which was in evidence, if only in slight degree. Summer months coincide with the ebb tide of bookbinding activity, and unless the very unexpected happens there will be no trade revival for this branch of the allied industry until the approach of autumn.

Principles of Prosperity.

The dispute in the binding industry was settled on March 27th, after a lengthy sitting, each side recognising an undertaking to respect the constitution of the Joint Industrial Council and the authority of the National Agreement. Mutual agreement on these principles carries an assurance of prolonged peace in the printing industry. In many respects the National Agreement is the Magna Charta of the industry, just as the J.I.C. is its League of Peace. Honourable allegiance to the clauses of the agreement and to the rulings of the J.I.C. will do more to eliminate friction and promote prosperity for all who earn their livelihood in the printing and allied trades than all the sectional striving after sectional interests.

New Rates for Machines.

In the settlement arrived at, it was agreed that any future arrangements as to extra rates or special conditions should operate as flat rates for the whole of the country. A new schedule of extra rates of pay on special binding and cutting machines was arranged covering combination gathering, wiring and wrappering machines, single wrappering and wiring machines, gathering machines of the Mercer type, self-feeding folding machines, three and four pile cutting machines, Krause and Seybold striker guillotines, Seybold and and Smyth trimmers, gauge perfectas, strip-back lining machines and blocking platens of the vertical Miehle and Miller feeder class. The new rates of pay became operative on the pay day of the week ending April 4th, and applied to the provinces and London respectively on the scale arranged.

Demarcation of Labour.

Nothing has yet been done to straighten out the tangle of undefined demarcation of labour in the binding industry. While there is no ground for complaint against the definition of graded value of skilled labour on highly complex binding machinery, it must be granted that there is solid reason behind the widespread feeling among bookbinding employers that equally important matters affecting themselves and the conduct of their business are left unsettled and chaotic. Time and again it has been pointed out that the industry is abounding in anomalies which react to the detriment of a large number of employers. Operations are allowed to be

Digitized by Google

performed by female labour in one town and not in another. Further than this, there are towns in which certain highly favoured offices are permitted to employ females on quarter binding, while less fortunate establishments would promote instant conflict by requesting union women to line up the sections of books. The net result is that while some bookbinders are able to develop their business according to their desire, others are precluded from entering fields where price is the main factor. Altogether the conditions which prevail at present are utterly unjustifiable.

Unemployment Returns.

The latest returns show that the percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 6·1 at March 23rd, compared with 6·0 at February 23rd, and 5·8 at March 24th, 1924. Trade Union returns covering the same period give for the bookbinding section a percentage of 4·7 unemployed at March as against 3·8 a year ago.

The Market for Materials.

Bookbinding materials are in but moderate demand, and prices are on a steady level. Agents are holding good stocks of Dutch strawboards, prices ranging from £8 17s. 6d. per ton to £9 5s per ton according to grade and locality. The usual £1 5s. per ton extra is charged for substances from 1½ lb. upwards. Ordinary white or brown lining is quoted extra per ton on the following scale: 10 oz. £3. 12 oz. £3 10s, 16 oz. £2, 20 oz. £1 16s., 1½ and 2 lb. £1 10s.

Price Designation.

It is time now that agents had ceased to refer to strawboard extras as "twice the price of pre war rates." A great number of to-day's buyers and users of strawboards were at school in pre war years and prices of that period are unknown and unappreciated by the new generation. If older men are apt to think and compare money values in terms of pre-war, younger men are not, because they never knew the old standards. Now that we are on definite post-war market levels, reference to earlier prices is unnecessary on quotation sheets.

A Branding Suggestion.

While on the question of strawboards there is a further point to be made. It is well known that Dutch boards vary in quality according to their make. In fact the majority are branded and sold from the mills under the brand. Why, then, should not all strawboards be listed and sold according to their brand title? The buyer would then have a definite and reliable guarantee of quality along with a foundation for comparison, appreciation or complaint.

The annual packing number of the *Paper Container* is well produced and furnishes much useful information concerning the subject of packing in paper and board.

Mr. Chivers on Library Binding.

Lecture to Royal Society of Arts.

Mr. Cedric Chivers, J.P., Mayor of Bath and well known bookbinder of that city, lectured on "Bookbinding" before the Royal Society of Arts at John-street, Adelphi, on Wednesday evening of last week. In informal conversational style, with frequent references to a large number of diagrams, drawings and books that were displayed, Mr. Chivers dealt very informatively with the subject of library binding and had much of practical interest to communicate.

The chair was occupied by Mr. Emery Walker, F.S.A., who, in introducing Mr. Chivers, referred to him as the most important bookbinder outside London, and one who had probably had more to do with library binding than anyone else.

Commencing his lecture, Mr. Chivers drew a sharp distinction between the art of decorative hand binding as ordinarily dealt with in the text books on bookbinding, and the class of binding of which he was to speak.

He recalled that some 35 years ago, before he was engaged on work of this class, a librarian had directed his attention to the bad condition to which library books were reduced after only a few issues to the public. He found that the cost of the bindings then used was 10d. a volume—an absurd price, the result of severe competition in the trade. That was his initiation into library binding. He thereafter devoted himself to this problem, discarding customary methods, and succeeded in evolving a style of library binding which, though costing twice as much, was much more economical in the long run. This style of binding was largely adopted by libraries up and down the country.

Presently, however, complaints began to be made as to the durability of these bindings, and this brought him to the realisation that modern paper and boards were becoming very different from the paper and boards which he had used at the beginning of his association with library binding. He made an inquiry into the reason why the folding qualities of paper, as shown in the life of bound volumes, was much better in English-produced volumes than in those coming from America. He found that a big advantage was gained in this respect by folding the paper across the grain, as was done in the English books, rather than in line with the grain, as in the American. Soon, however, it was found that the papers used for books were so poor that something other than ordinary methods of bookbinding were absolutely necessary. To illustrate the weakness of modern machine made papers, the lecturer referred to a number of drawings—enlargements from photo micrographs—showing the fibrous construction of papers. A view of the edge of a piece of linen paper revealed the fibres well interlaced, giving a strong, durable sheet, whereas the edge of a piece of modern book paper was seen to have fibres separated one from another with interstices of air. Photo-micrographic illustrations showing sections through folds served to indicate the weakness of commonly-used book papers, and illustrations were shown also of the strengthening effect upon them of a treatment with cellulose solution.

After briefly referring to principles of oversewing, Mr. Chivers said he would refrain from describing the whole process of binding, but he proceeded to correct in some respects the Report of the Royal Society of Arts on Bookbinding, issued in 1901—which Report he characterised as one of the most important and useful things ever printed. One point of criticism was the fact that the Report advocated the use in bookbinding of "four unbleached linen tapes." The lecturer said it was not necessary to use any linen tapes at all; their use entailed extra work and extra expense, whilst hindering the free flow of glue and also causing additional thickness. He also disagreed with the recommendation of the use of split boards and the insertion of head bands.

In speaking of the difficulties encountered owing to the papers used by publishers at the present day, mention was made of the use of a bath of size, which, he said, was an excellent means of strengthening book papers; it cost less than a shilling a volume, whilst it increased the life of a book three or four times.

Referring to art paper, Mr. Chivers said hat in respect of this, as of other classes of paper, his experience—covering some six or seven millions of books—did not indicate any serious deterioration of paper, except that due to usage. Books on art paper, however, of which there were a good many, particularly children's books, caused difficulty to the binder. Every binder knew that such books could be "guarded" so that they would lie flat, and this could be done cheaply by machine at about 2s. a volume.

Coming to the subject of leathers, Mr. Chivers referred again to the Report of the Royal Society of Arts, and said that although it had advised the tanning of leather in special ways, it had not made a comparison of leathers one with another. With the aid of charts Mr. Chivers proceeded to give results of some tests he had made, tests which covered the tearing and breaking strengths of leathers, bending tests and tests under severe conditions, such as subjection to acid atmospheres. One of the most striking facts noticed in these results was the superiority of Niger leather, the use of which the lecturer strongly commended, though he pointed out imperfections of appearance to which some binders objected.

Mr. Chivers said many librarians had inquired for some form of binding, which, whilst very cheap, would serve for the covering of books which were not much used—something that would hold them together and be reliable and strong. He said that by the use of the over-sewing machine, and suitable choice of leather and board, it was now possible to produce a form of binding which, while not suitable for good books, was well adapted for this particular purpose. An example of such binding was shown.

The use of transparent vellum (*i.e.*, vellum in the state in which it is before being stretched) was another point touched upon. Mr. Chivers circulated for examination bound volumes showing the very effective use of this as a covering material, both for new books and for repairs to old bindings.

The lecture was followed by an interesting discussion, in which some further points were elicited, one being that Mr. Chivers had not been able to obtain dyed leathers that were really acid free, that he found it harmful to dye Niger leather and was therefore opposed to its being dyed.

DIVIDENDS AND REPORTS.

RAPHAEL TUCK AND SONS.—Interim dividend on ordinary shares at the rate of 6 per cent. per annum for six months ending October 31st last, payable May 15th (against 5 per cent. per annum a year ago).

ODHAMS PRESS, LTD.—The first report since the capital reorganisation, covering the year 1924, shows a net trading profit of £102,923, against £88,689 for 1923 and £71,145 for 1922. As under the provisions of the capital reorganisation scheme all dividends accrued to December 31st, 1924, were satisfied, the directors have allocated the profit of £102,923 as follows: Provision for taxation, £7,964; reserve for adjustment of current accounts with associated companies, £10,000; capital reorganisation and new issue expenses, £5,459; management and directors' shares of net profit, £9,799; general reserve, £50,000; carry forward, £19,701. The interim dividend upon the 7½ per cent. cumulative "A" preference shares to March 31st, 1925, was duly paid on April 1st, 1925. "The directors have every reason to anticipate the regular payment of dividends on all classes of shares."

NEW COMPANIES.

SALISBURY PRESS, LTD. — Capital £10,000, in £1 shares; to acquire the business of commercial, general and theatrical printers and wholesale and manufacturing stationers now carried on at 3 and 5, Wilton-road, Salisbury, Wilts, as the "Salisbury Press." Private company. First directors: A. Ward and Mrs. Dorothy G. A. Ward. Registered office: Palace Chambers, Stroud, Glos.

GEO. W. LOCKWOOD, LTD.—Capital £10,000, in £1 shares; to acquire the business of a manufacturing stationer and printer carried on by G. W. Lockwood at 8A, City-road, Manchester, as "Geo. W. Lockwood." Private company. Directors: G. W. Lockwood and C. S. Lockwood. Solicitor: D. F. Hart, 18, Tib-lane, Cross-street, Manchester.

JAMES REID AND SON, LTD.—Capital £4,000, in £1 shares; stationers, printers, lithographers, engravers, etc. Private company. First directors: Miss Mary C. Reid and Alexander Pyper. Registered office: 87, St. Vincent-street, Glasgow.

GEORGE JENNER AND SON, LTD.—Capital £1,500, in £1 shares; wholesale and retail newsagents, printers, stationers, lithographers, paper merchants, makers of, and dealers in, office fittings and supplies, photographic and artistic materials, etc. Private company. First directors: G. Jenner, H. Jenner, Mrs. E. Jenner and T. Banks. Registered office: The Paddock, Chatham.

DUBLIN PUBLISHERS, LTD.—Capital £1,000, in £1 shares; to acquire a publication known as the *Dublin Magazine*, to print and publish the same and to carry on as publishers, booksellers, newspaper proprietors, etc. Directors: J. Starkey, F. P. Griffith, H. Barnardo and W. W. Starkie. Registered office: 9, Commercial Buildings, Dame street, Dublin.

MOTOR PRESS, LTD.—Capital £100, in £1 shares; proprietors and publishers of newspapers, journals, magazines, books, etc., especially those dealing with automobiles, etc. Private company. First directors: J. Scott-Taggart, F.Inst.P., A.M.I.E.E., and Mrs. D. Scott-Taggart. Registered office: Bush House, Strand, W.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

MEARS AND CALDWELL, LTD. (printers, etc., London).—Debenture charged on freehold, leasehold and copyhold property, present and future, fixed plant and machinery, uncalled capital, undertaking and all other property and assets dated April 14th, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd.

PERCIVAL JONES, LTD. (printers, stationers, etc.).—Mortage on 148 and 149, Great Charles-street, Birmingham, dated March 31st, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £14,500.

WOOD, WESTWORTH AND CO., LTD. (stationers, printers, etc.)—Mortgage on certain leasehold property in Corporation-street, and Atlas-court, at Hardshaw, St. Helens, dated April 9th, 1925, to secure all moneys due or to become due from the company to the Westminster Bank, Ltd.

BIRDSALL AND SON, LTD. (stationers, etc., Northampton).—Particulars filed of £17,000 debentures authorised April 14th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

PRESS ASSOCIATION, LTD.—Satisfaction to the extent of £2,000 on March 25th, to the further extent of £5,000 on April 1st, and to the further extent of £3,000 on February 20th, 1925, of mortgage dated May 14th, 1923, securing £55,000.

STRONG HANBURY AND CO., LTD. (London).—Satisfaction in full on March 20th, 1925, of charge dated May 18th, 1921, securing all moneys not exceeding £5,000.

STRONG HANBURY AND CO., LTD. (paper merchants, manufacturing stationers, etc., London).—Charge on leasehold manufactory and warehouse, 14, 16, 18, Nile-street, Shepherdess-walk, dated April 15th, 1925, to secure all moneys due or to become due from the company to Coutts Bank, Ltd., not exceeding £5,000.

BANKRUPTCIES, etc.

Re JOHN HORN (LONDON), LTD.—This company carried on business as box makers and cardboard manufacturers at Vine-yard, Aldersgate-street, E.C. A winding-up order was recently made, and the first meetings of the creditors and shareholders were held on April 21st, at the Board of Trade Offices, Carey-street, W.C. A statement of affairs was presented showing total liabilities £52,610, consisting of unsecured debts, £6,322; preferential claims, £287; and loans on debenture bonds, £46,000: assets valued at £15,725; and a deficiency of £37,136 as regards shareholders, the issued capital being 5,000 deferred shares of 1s. each and 2 ordinary shares of £1 each. The official receiver reported that the company was registered on September 18th, 1923, with a nominal capital of £5,000, divided into 4,750 ordinary shares of £1 each, and 5,000 deferred shares of 1s. each. It was formed for the purpose of taking over the liabilities and assets of the business of publishers, printers, booksellers, stationers, etc., carried on by John Horn (London), Ltd. The old company was incorporated on May 9th, 1919, and went into voluntary liquidation on August 22nd, 1923. Mr. W. G. Sinclair purchased the goodwill, name, leasehold premises, plant, machinery, office furniture, patents, licences, horses, motor and other vehicles, stock, book debts and benefit of pending contracts in connection with the business of box makers and cardboard manufacturers carried on by the vendor company, the consideration being agreed at £46,000 and payment of the outstanding liabilities. The cash consideration was satisfied by bills of exchange extending over five years. The purchaser undertook to form a new company, with a nominal capital of £5,000, to acquire the benefit of that contract, and to give a 5 per cent. first mortgage debenture, constituting a floating charge on the undertaking of the new company to secure the payment of the £46,000. Mr. Sinclair, in consideration of the allotment to the new company, became entitled to the 5,000 deferred shares of 1s. each. Two bills of £5,000 each were paid by Mr. Sinclair, but neither he nor the company were able to meet any further instalments, and on October 17th, 1924, Mr. A. C. Vincent, I.A., 13, Queen-street, E.C., was appointed as receiver. The failure of the company was attributed to trade depression; to the inability of Mr. Sinclair to pay the amounts due under his guarantee, and to his break down in health. In the absence of any resolution, the liquidation was left in the hands of the official receiver.

Printers' Pension Corporation.

Progress Reported at Annual Meeting.

There was a record attendance at the 98th annual meeting of the Printers' Pension Corporation held at the St. Bride Institute on Saturday.

Sir G. Rowland Blades, M.P., who presided, said the revenue had exceeded expectation, being, with one exception, the largest amount received in the history of the Corporation. There had been distributed during the year in pensions and other forms of benefit, amongst 1,779 recipients, the sum of £30,829. The aged men and women receiving pensions number 823, among whom was distributed the sum of £20,812, the largest amount expended in pensions in any one year. Owing to the generous response to their appeal for the War Orphan Fund the Council had been able to continue the weekly grants to orphan children, the amount thus distributed being £9,178.

The second Flag Day, organised by the Joint Industrial Council of the printing trade, added £3,457 to this fund. The Almshouse Fund should have more recognition and support.

The total sum announced at the festival dinner was £33,176, an amount only once before exceeded at a festival of the institution. The Council were deeply grateful to Major Astor, M.P., for the great service he had rendered the Institution, and to *The Times* for the valuable publicity given. At the annual pension election, on April 18th, 127 pensioners were elected, making the total number of pensioners to-day 950. He appealed to all connected with the printing trade to increase their interest and support of this admirable institution.

Mr. C. W. Bowerman, M.P., referred to the increase of income from investments, now amounting to £7,812, due to the recent rearrangement of invested funds; and also to the increasing sums raised by the Auxiliaries and Pensions' Associations, stating that since their formation the former had contributed a total of £58,100 and the latter 36,081 towards the funds of the Corporation.

A tribute was paid to the memory of the late Mr. W. Christopher, collector for the Corporation for 28 years, the large audience standing for a few minutes in silence.

Viscount Burnham, Mr. A. F. Blades, Mr. G. F. McCorquodale and Mr. W. A. Clowes were re-appointed trustees, and Mr. J. Mortimer, secretary, and the other officials were unanimously re-elected.

A vote of thanks to the Council and officials terminated a successful gathering.

Printers' Medical Aid.

Annual Dinner.

Many well-deserved tributes were paid to the admirable work being done by the Printers' Medical Aid and Sanatoria Association on Thursday last week at the Broad-street Station Restaurant. The occasion was the annual dinner of the Association, which was presided over by Mr. C. W. Bowerman, M.P. (president). Those present included Mr. T. E. Naylor, M.P., Mr. Wilson Howes, Mr. Woodgate Stevens, Mr. A. E. Holmes, Mr. T. G. Newland, J.P., Mr. W. Vandy, Mr. H. W. Clark and Mr. Arthur O'Connor (secretary). Mr. George Isaacs was unable to be present.

"The P.M.A."

Mr. Bowerman, in proposing "The P.M.A.," described the gathering as a happy family circle. The fact that the Association had issued over 17,000 letters in a twelve-month showed convincingly the necessity for its formation. Its activities also extended to sanatoria and convalescent homes, and in this connection they were glad to see present Mr. and Mrs. Matthews from Hastings. Speaking of the work of the committee and of Mr. Vandy (chairman of the committee), he went on to say that this gentleman had in mind new ideas in connection with the Association's work. Amongst these was setting-up their own private workshop, and producing the spectacles and surgical appliances required by the members, their wives or children. There was nothing in the nature of charity about the Association's work, and further all of it was of a voluntary character. Mr. Arthur O'Connor he described as the man on the pedestal. 'He deserved to be there, because there was no man more fitted for the post, and no one more zealously concerned in the Association's welfare.

Mr. O'Connor, replying, said it was quite true the Association was still making progress. There were those who said that the strike of 1911 and the passing of the Insurance Act would mean the break up of the Association. Those anticipations had not been fulfilled. There had been quite a number of imitating organisations started during recent years, but they had not lived very long. Their membership today was round about 46,000, a figure which did not include the trade unions.

Mr. Vandy, who also responded, spoke with much eloquence regarding the work of the committee, which, he said, consisted of men and women with their minds focussed on one thing—the progress of the P.M.A. The voluntary principle was its fetish, and it was because of that it had made such excellent progress. There were no limits to its possibilities, and its outlook could not be cribbed, cabined or confined.

The "Kindred Associations."

Mr. A. E. Holmes, in proposing this toast, said he felt greatly impressed by the work the Association was doing. What the Paper Workers and the Natsopas were doing did not in any way conflict with the P.M.A. Mr. Holmes then referred to the establishment of the home for retired members at Wellsborough belonging to the Natsopas, and the new home of the Paper Workers at Filey, both of which he thought spoke volumes for the organisations initiating these schemes.

Mr. T. G. Newland, replying, alluded first to the Home at Carshalton. Here they produced everything for their own requirements in the way of produce for their patients. Though this meant an average cost of £300 to £400 per annum more than if the food was bought in the open market their patients appreciated it. Theirs was a national organisation and they had found it very expensive to bring their Scottish members to Carshalton. That had brought about the necessity for the Home at Filey, which was a delightful spot 7½ miles along the coast from Scarborough. They hoped to have accommodation there for forty-five patients, and he believed it would always be pretty full up, for their organisation extended as far north as Aberdeen.

"The Press."

Mr. Wilson Howes, in offering this toast, said they all regretted the absence of Mr. Fredk. W. Bridges, of the *Caxton Magazine*, but they were pleased that the worthy editor of that journal, Mr. A. E. Owen Jones, was present. Mr. Howes then went on to refer not only to the feast of good things which that journal and the *British and Colonial Printer and Stationer* always gave them, but of the praiseworthy way in which their columns were ever open to causes such as the one they were honouring that evening. The speaker referred also to the space devoted by the organs of the trade unions along similar lines.

The P.M.A. and their Guests.

Mr. A. E. Owen Jones, who replied in a very eloquent speech, said that, whatever else might get into his waste paper basket—and he believed he might say the same of his colleagues on other printing trade journals—nothing pertaining to their Society or any similar one got into that basket. In this connection he felt perfectly safe in speaking not only for the *Caxton Magazine*, but for the *British and Colonial Printer and Stationer*, the *British Printer*, and the other journals connected with their great craft.

Mr. T. E. Naylor, in submitting the toast of "The Visitors," alluded to the fact that there were very few present who were not—remotely or otherwise—connected with the printing trade, but he was sure they would—after the remarks they had heard regarding the establishment of convalescent homes, etc.—go away thinking what a wonderful lot of people printers were.

Mr. G. T. Boorer replied to this toast.

Mr. J. E. Simcocks, in proposing the toast of "The Chairman," said he was of opinion the toast to Mr. Bowerman that night should be considered more in the nature of a thanksgiving, in view of the recovery he had made from his serious accident.

Mr. Bowerman, after briefly returning thanks, moved that the best thanks of the company be tendered to the stewards and the musical artistes.

The dinner stewards were Messrs. J. E. Simcocks, W. F. Moore and G. T. Richards, whilst the concert artistes consisted of the Misses Violet Wenderby, Winifred Mansfield and Messrs. Emil Clare, Clay Thomas and Joseph Batten (accompanist).

"The Price of Books," by Stanley Unwin, is issued as a neat pamphlet by Messrs. George Allen and Unwin, Ltd., London. For the high price of books (which, however, he asserts are relatively cheaper than before the War) he puts the blame chiefly upon under-consumption—meagre buying of books by those who can afford to buy.

"Cellufot."—Inquiries have been received for the location of manufacturers of cellufot. The preparation has the appearance of celluloid, is non-inflammable, and is applied to paper.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

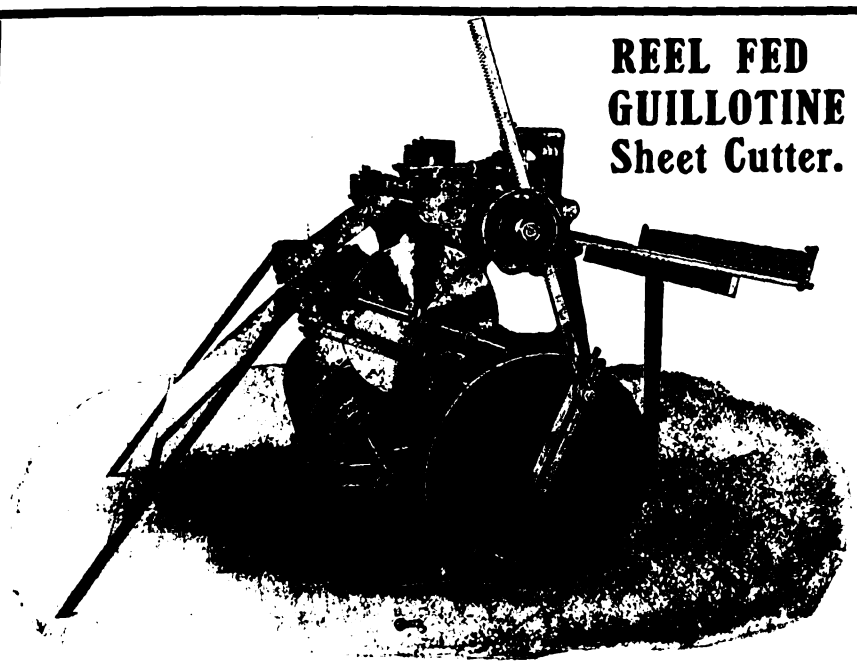
State of Employment.



In the paper trade employment on the whole continued fair during March; it was still bad, however, in the wrapping section and was not so good as a month ago in the hand-made section. Employment in the letterpress printing trade showed a further improvement in most of the large centres, and was fairly good. With electrotypers and stereotypers employment continued good, and was better than a month ago in London and Manchester. In the lithographic printing trade employment remained fairly good on the whole; in Manchester short time was prevalent. With lithographic artists employment continued fair in London, and was slack and worse than in the previous month at Manchester.

Employment was only moderate on the whole in the bookbinding trade. Short time was prevalent in London, where employment was also affected by a dispute; at Edinburgh, employment was reported as fair and better than in the previous month.

The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 6·1 at March 23rd, compared with 6·0 at February 23rd and 5·8 at March 24th, 1924. In the paper and paperboard industry the percentage was 7·8 at March 23rd, compared with 7·5 at February 23rd and 8·9 at March 24th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 7·1 at March 23rd, compared with 7·2 at February 23rd at 7·4 at March 24th, 1924.

Returns furnished by trade unions showed that out of a membership of 66,027 in letterpress printing the percentage unemployed at the end of March, 1925, was 2·2, February 3·0, and at March, 1924, 3·0. Out of 10,230 members in lithographic printing 2·8 were unemployed at the end of March, 2·9 at February, and 3·3 at March last year. In bookbinding, with 15,243 members, 3·8 were unemployed at the end of March and February, and 4·7 at the end of March, 1925.

Winkler, C. Automatic sheet feeders for printing and other machines. 231,723.

1925.

Odell, H. Feeding mechanism for embossing and other printing presses. 227,835.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE.

1925.

Fehlmann and Diebold. Files or covers for binding together loose papers of any description. 231,887.
Kodak, Ltd. Method of, and apparatus for, making paper strips. 231,869.
Staubli and Co., Geb. Apparatus for sheet fastening machines for applying adhesive to the sheets. 231,860.

State of Employment.

In the paper trade employment on the whole continued fair during March; it was still bad, however, in the wrapping section and was not so good as a month ago in the hand-made section. Employment in the letterpress printing trade showed a further improvement in most of the large centres, and was fairly good. With electrotypers and stereotypers employment continued good, and was better than a month ago in London and Manchester. In the lithographic printing trade employment remained fairly good on the whole; in Manchester short time was prevalent. With lithographic artists employment continued fair in London, and was slack and worse than in the previous month at Manchester.

Employment was only moderate on the whole in the bookbinding trade. Short time was prevalent in London, where employment was also affected by a dispute; at Edinburgh, employment was reported as fair and better than in the previous month.

The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 6·1 at March 23rd, compared with 6·0 at February 23rd and 5·8 at March 24th, 1924. In the paper and paperboard industry the percentage was 7·8 at March 23rd, compared with 7·5 at February 23rd and 8·9 at March 24th, 1924. In the cardboard box, paper bag and stationery trades the percentage was 7·1 at March 23rd, compared with 7·2 at February 23rd at 7·4 at March 24th, 1924.

Returns furnished by trade unions showed that out of a membership of 66,027 in letterpress printing the percentage unemployed at the end of March, 1925, was 2·2, February 3·0, and at March, 1924, 3·0. Out of 10,230 members in lithographic printing 2·8 were unemployed at the end of March, 2·9 at February, and 3·3 at March last year. In bookbinding, with 15,243 members, 3·8 were unemployed at the end of March and February, and 4·7 at the end of March, 1925.

BLANKETS

FOR ALL PURPOSES.

COINCIDENT with the improvements and advance generally in Printing Machinery and Appliances, experiments have been conducted which have resulted in the production of the perfect blanket for the modern rotary press.

For a number of years printers have used overlays of various materials with varying success.

The "Compound" Blanket is a perfect combination of the two and is more convenient and economical.

Print generally and cuts in particular being produced with a greater degree of fineness.

The "Compound" Blanket, together with the requisites enumerated below, is always to be seen at our Showrooms: 15-16, Thavies Inn, Holborn Circus, London, E.C.1, where a skilled staff is available to advise you upon all points of difficulty.

Woollen Blankets.
Rubber Blankets.
Drying Blankets.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 96. NUMBER 19. [REGISTERED AS A NEWSPAPER.] LONDON: MAY 7, 1925. Special Exhibition Issue. 4d.

The Seventh Printing Exhibition.

What will be Seen and Done at the Agricultural Hall.

The pages of this special number of the *British and Colonial Printer and Stationer* provide an indication of the extent of the Seventh International Printing, Stationery and Allied Trades Exhibition which opens at the Royal Agricultural Hall, Islington, on Saturday, May 16th. For many months arrangements have been going forward for this event, which this year promises to exceed in size and importance any of its predecessors. Exhibitions are one of the modern forms of advertising, along with the Press; and it is a testimony to the enterprise of printers and those of the allied trades that they come forward so readily to take advantage of the opportunities here offered.

Royal Opening.

This year there is to be a Royal opening of the Exhibition, and Prince Henry has graciously consented to perform the ceremony. After the members of the Council assemble at 11.20 a.m., His Royal Highness will arrive at the Hall at 11.30, and will be received by the president of the Exhibition, Mr. W. H. Lock (chairman of the Council), and Mr. W. I. Burch (vice chairman). Members of the Council having been presented to the Royal visitor, the Prince will then make a tour of the stands and declare the Exhibition open, this proceeding taking place at 12.30.

Exhibitors.

In subsequent pages and among our advertisements will be found preliminary notices of some of the exhibits. These clearly suggest that the display will be at once interesting and instructive to all who are identified with the craft through any of its multifarious sections. Since the last Exhibition the Agricultural Hall has been improved for such purposes, especially in the direction of heating. Great as the space is, it is none too extensive for the wealth of exhibits which the organisers (F. W. Bridges and Sons, Ltd.) are getting together. In its entirety the collection will epitomise what is being done in the printing industry to bring the art to greater perfection and proficiency. An attractive feature will be the working plants which will demonstrate the latest achievements of the inventor and the engineer, and the specimens of printing which will show the skill which British craftsmen have attained. As the official bulletin observes, "the progress made in our own particular art and craft since the last show (in 1921) will be surprising and challenging to all concerned."

Technical Progress.

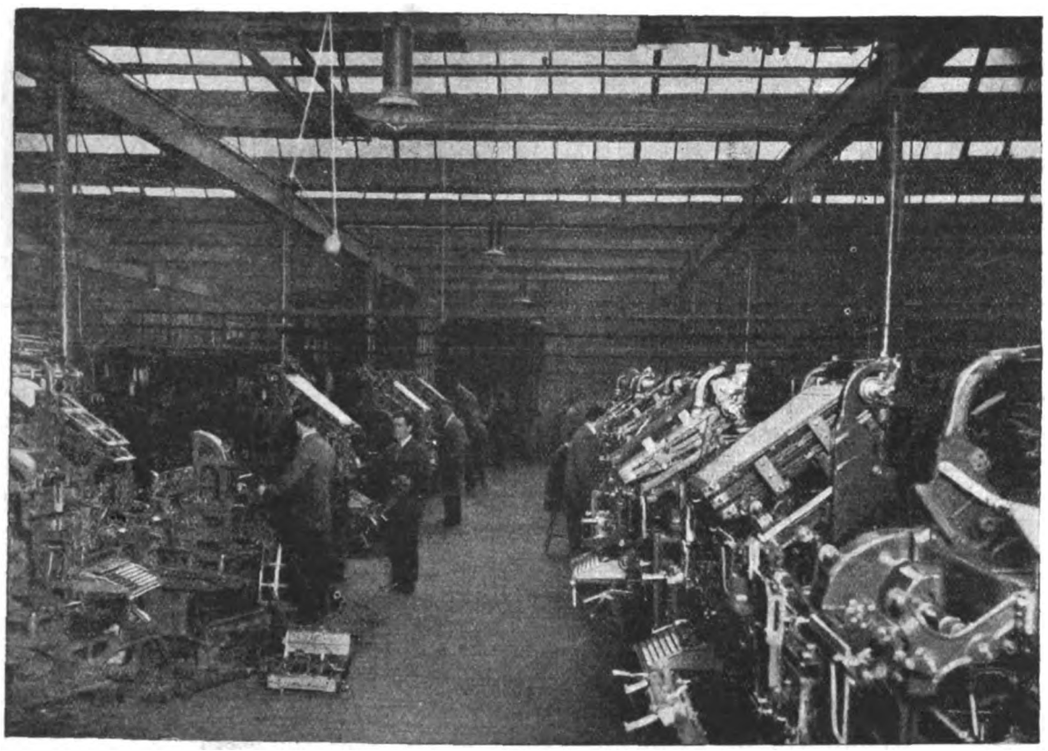
In detail there will be a wealth of invention and practical ability which will afford infinite instruction to master printers and others engaged in allied activities. Developments in machinery and devices are constantly being made, and the most recent of these, varied as are the numberless sections of the industry, will be on view. While craftsmen will be especially concerned in the wide scope of the demonstrations, laymen will find in the Main Hall, in the Gilbey Hall and in the Gallery ample features to inform them as to the invaluable part which printing and the allied trades play in almost every walk of life. The art is one which makes a wide appeal; it has a great fascination for the "man in the street," because, while its results are seen and used by everyone nowadays, the details are still to a large measure a mystery. To these, then, no less than to the initiated the Printing, Stationery and Allied Exhibition should be one of the attractions of the year.

Nor is it only printing and its immediate subsidiary callings that will be featured at Islington. There will be demonstrations of the making of envelopes, the manufacture of stationery, and the manipulation of cardboard and so on in all their infinite variety. The application of photography to printing is a special section of the allied trades which will be represented in its numerous interesting phases. For one thing, the Federation of Master Process Engravers is to have a composite exhibit, which, for the first time in the history of the craft, will provide an exhibition of process work, where the public can come and see how illustrations are produced by many of the leading firms in the trade. Individual exhibitors, also, will be showing apparatus for use in the most up-to-date methods of producing printing surfaces for photo-litho, photogravure, and so on. Indeed, every branch of printing technology is expected to be represented, not omitting even that much discussed novelty, photo-typesetting.

London Inter-District Competition.

Apart from the stands and their exhibits, there are a number of other functions associated with the show which give added value and importance to the event. Not the least notable of these is the London Inter-District Association Competition and Exhibition of Printing. Master printers in the Metropolis have been engaged upon this undertaking for some time, and some very excellent work will be on view, since the examples sent in have been carefully scrutinised and selected. A definite space has been allotted to the London Master Printers' Association for this purpose, and it will afford enlightenment to all visitors to see what London printers can do. All the exhibits in this section will be included in the open competition, and gold, silver and bronze medals will be awarded. Furthermore, the Council of the L.M.P.A. have agreed to give a trophy for the best printing exhibit submitted by a district association, which will hold it until the next Exhibition is held. This competition is a happy idea, and in itself should do much to promote a healthy rivalry which can only tend to the extension and enhancement of good craftsmanship.

The competition section of the Exhibition offers other schemes for the promotion of skill and initiative. Major Astor, for instance, has offered prizes to members of any recognised jobbing guild for typographical display. Further competitions cover particular classes of printing, and will undoubtedly inspire printers, young and old, to their best endeavours.



Early Printed Books.

An interesting addition to the Exhibition will be the showing of some of the fine collection of 15th and 16th century printed books from the library of Mr. George W. Jones, at the Sign of the Dolphin. Printers throughout the world have been enriched by Mr. Jones's enterprise in securing some of the rarest specimens of the printer's art by the patient study he has made of them, and by the rich application he has made of what is most beautiful in them to his own good work. Printers will appreciate the kind thought which has made the exhibition of these choice pieces of great work possible.

Official Visits.

What may be described as the business side of the Exhibition represents one of its most important aspects. In this connection arrangements are made for visits from various printing organisations. Thus there is an official visit from the Worshipful Company of Stationers on May 18th. The Federation of Master Printers and the Master Bookbinders Association are due on the 21st and the London Master Printers' Association on the 27th. Again there is a Printers' Pension Corporation Day on May 28th. Other days are set apart for visits from the Joint Industrial Council and the Federation of Master Process Engravers. Associations identified

This photograph, taken a few weeks ago, shows a portion of the Linotype Erecting Department at Altrincham, Cheshire.

The average monthly sales of Linotype machines during the past two years have been much larger than at any other period of this Company's activities. The Model 4 with Side Magazines alone has heavily taxed the resources of the Works at Altrincham, and there is now no doubt that jobbing printers in this country, the Continent, and the Colonies have determined for themselves that the modern Linotype gives them the facilities they need for the rapid composition of display work and general jobbing.

with the executive side of the craft are again showing their interest in the Exhibition. Accordingly there will be official visits from the Printing, Bookbinding and Kindred Trades Overseers' Association on the opening day, by the Printers' Managers' and Overseers' Association on May 23rd, by the Electrotypers' and Stereotypers Managers' and Overseers' Association on May 25th, while the Jobbing Guilds' reunion will be held on the closing day, May 30th. These do not complete the list of official visits; but they indicate the support which is being given to the Exhibition by representative institutions and foreshadow a decided success for the 1925 display.

Facilities are offered to responsible persons in the trade to visit the Agricultural Hall during the period of the Printing Exhibition. Thus a master printer, overseer, father of chapel or trade union secretary may obtain any number of admission tickets of one dozen and upwards at the reduced rate of 3d. each, on which there is no entertainment tax, the ordinary admission being 1s., plus 2d. tax.

Exhibitors at the Printing Exhibition.

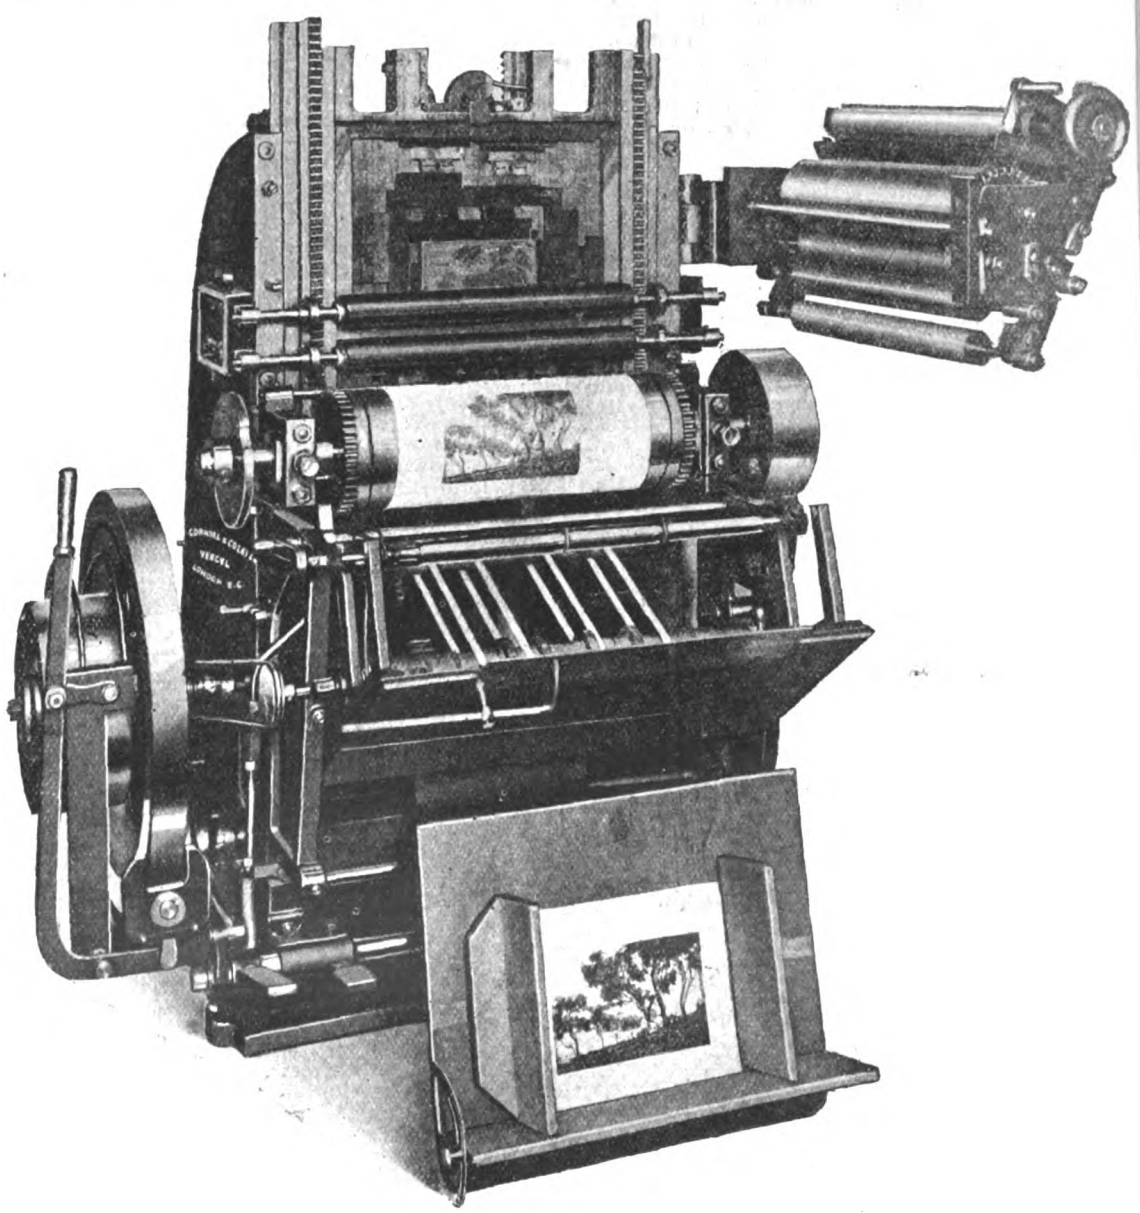
WHAT OUR ADVERTISERS ARE SHOWING.

Following are short descriptions of some of the exhibits which will be found on the stands at the Agricultural Hall:—

The Albion Sewing Cotton Co., Ltd.

At the stand of this London firm—No. 12, Entrance Hall—can be inspected a wide range of colours and sizes in the well-known Albion "Silky Cords," the mercerised cords of a hundred uses. These cords, stocked in over 100 colours, are used for calendars, carrier bags, boxes, etc. Tassels are also well to the fore, and should be of special interest in connection with Christmas and greeting cards, fancy calendars, booklets, etc. Book-sewing and stitching threads are a specially strong line with this company, and particular attention will be directed to the display of the "Amir" threads, a recent production which is meeting with a huge demand. A number of other lines, such as twines, tapes, rubber string bands, carding elastic, etc., will also be shown.

Algraphy Ltd.



At Stand No. 11, Arcade, there is a special exhibition of zinc and aluminium plates showing special surfaces for lithographic and direct offset printing. Algraphy Ltd. is still in a leading position with regard to the supply of these goods, and, having been established in 1898, claim that through experience they can produce the best surface for lithographic printing on both zinc and aluminium. The enormous advances made in the photographic arts as applied to offset printing have not found this enterprising house behindhand in the requirements necessary to enable the metal plate to be used successfully. Further, rubber blanket, which is so essential for good results, has had special attention paid to it, and the material which has been produced as the result of long and expensive experiments is exhibited, together with other interesting specimens. A free sample of "Zetch," which is a compound now used by about 75 per cent. of the lithographic establishments in this country, is given on production of trade card. Algraphy Ltd. has connections throughout the world, and stock of all material may be obtained from Messrs. F. T. Wimble and Co., Ltd., Clarence-street, Sydney, who are the agents for Australasia.

Joseph Bancroft and Sons Co.

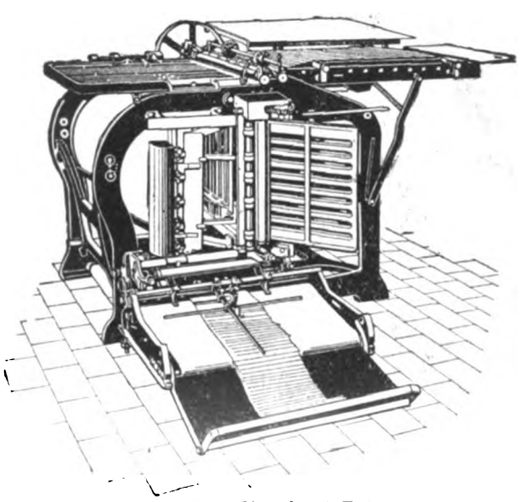
This firm of cotton bleachers, dyers finishers and manufacturers, of Rockford, Wilmington, Delaware, are exhibiting at Stand 36a, Gallery. Their plant is described as the largest of its kind in the world, and, in addition to the manufacture of general cotton goods, the firm have an important department for the manufacture of book cloths, buckrams, tag cloths, label cloths, etc. It is these cloths that they are exhibiting at Islington. The distinctive linen finish of the book cloths put them in a class by themselves, as they are not quite the same as the usual run of book cloths. The legal buckram is a great speciality, being made under the very strict specifications of the Bureau of Standards, which stipulate that it must stand a certain strain; fold without cracking, must be free from any material attractive to insects, be free from aniline dye and absolutely sunfast, etc. It is largely used for library, law and loose-leaf bindings and is particularly suitable for all classes of bindings intended for the colonies and hot climates. The Joseph Bancroft and Sons Co. was established in 1831 by Joseph Bancroft, who was previously apprenticed to his uncle, Jacob Bright, father of that eminent English statesman, John Bright, and the business is still carried on by members of the same family. In six years the firm will celebrate its centenary, and during the whole of the time it has been in existence it has always kept pace with the times and anticipated the future, until to-day the Bancroft mills are claimed to be the largest of the kind in the world. The sole agents for the Bancroft products in Great Britain and Ireland are Nickerson Brothers, who carry a large stock.

Connoll and Coles, Ltd.

The outstanding exhibit at Stand 11, Row B, in the Main Hall, is the *all-British* "Vercyl" vertical high speed job printing press in full operation. The press ready for printing is illustrated herewith. It will be seen that the inking apparatus and feed board swing clear for easy access to forme and cylinder. This machine is the outcome of three years' experimental work by British printers and printers' engineers, and is quite a notable achievement, especially when the very remarkable low price is considered. Special features are that perfect register is assured, and that very little time is taken in changing short run jobs from one to another. The floor space is only 4 ft. square. The inside chase is 16 in. by 11 in. The method of stroking sheets into grippers from a sloping feed board involves no sacrifice of speed, while avoiding the troubles usually associated with mechanical feeding apparatus on small machines. Delivery is automatic, print-side-up in front, in view of operator, who, by the way, need only be a platen hand. All classes of paper stock from pulp to tissue are handled. The vertical type of press appears to have come to stay, and even those printers who are not at present thinking of ordering will find a visit to this stand interesting. Messrs. Connoll and Coles will be pleased to send further particulars on application.

"Vercyl" Vertical High-Speed Job Printing Press.

Francis J. Connolly, Ltd.



This stand, which is No. 1, Main Entrance Hall, occupies a greater area than that of any other exhibitor, and apart from the standard apparatus manufactured by Marinoni-Voirin there are to be seen no less than six machines entirely new, which have never been exhibited previously. Also in operation are automatic feeders of the file type, of four different designs.

Digitized by Google

The machines shown include one of a design which has excited much controversy but has proved its utility wherever installed—the two-colour superimposed single blanket machine. This machine is equipped with independent damping units for each colour, and fitted with an automatic pile feeder of the Dexter make. Quad demy in size, it is able to run at a speed of 3,000 per hour, register secured on the blanket being microscopically exact and permanent. Another interesting exhibit is a quad demy two-colour machine, new style, having one large cylinder with two impression surfaces, two plate cylinders and two blanket cylinders of half the diameter. Two sheets are always in transit. Independent damping units are fitted for each colour, and the speed of this machine in two colours is about 2,500 per hour. On the same stand is a perfecting offset machine, quad demy in size, with two plate cylinders and two blanket cylinders, all of the same diameter. The blanket cylinders run in contact and form the impression cylinders, printing both sides of the paper simultaneously; the plates therefore are both made up positive in character; the weight of colour is rigidly maintained as no transfer of impression is made. Independent damping unit is fitted to each plate cylinder. Other features of this notable exhibit are: Single colour offset machine, double demy in size, of an entirely new design, built of an intensely massive and rigid construction, to run at a speed of 4,000 per hour; No. 1, medium single colour offset machine, to print a sheet 23½ in. by 18½ in., with a self contained piling delivery and automatic pile type feeder, making a perfect unit and running at a speed of 4,000 per hour; sheet fed photogravure machine, to print a sheet 23½ in. by 31½ in., speed 3,000 per hour automatically fed, specially designed for register colour work, and incorporating a patented compensated cylinder ensuring register, notwithstanding the repeated grinding of the copper cylinder; offset proving and reversing press, 23½ in. by 18½ in. which offers special facilities; automatic fed rotary carton punching, creasing and slitting machine, entirely new in design, speed 3,000 sheets per hour, quad crown; double beam precision cardboard cutting and creasing machine; vertical carton punching machine; union patent centric gear camera for half-tone and photo-litho, 24 in. by 24 in., having many new features; union all steel volute spring camera stand, of a new and specially attractive design; Union steel face-up printing frame, with automatic rising front, quad demy; Union printing frame, wood, 23½ in. by 18 in., with hinged face.

Canadian American Machinery Co., Ltd.

A comprehensive range of their British-built folding machines, notably the Cleveland folder, will interest visitors to the Stand of

The Cleveland Folder.

the Canadian American Machinery Co., Ltd. They are now building a miniature Cleveland folder, which, while taking only a crown sheet, embodies all the advantages of the Cleveland system, and the same versatility on a smaller scale and capacity for handling not only ordinary folds, but distinctive folds which are otherwise designated as "hand folds." Various models of folders ranging from quad crown down to demy folio are being shown, so that there should be no difficulty in finding a model to suit every requirement. They are also exhibiting the well-known Kelly presses. The two-revolution Kelly appears to be gaining considerable popularity in this country owing to the speed and excellence of the work, whether ordinary commercial jobbing, or high-class colour work.

R. W. Crabtree and Sons, Ltd.

The exhibit of Messrs. R. W. Crabtree and Sons, Ltd., at Stands 4 and 5, Row D, Main Hall, consists of two sections, one devoted to newspaper printing machinery and one to offset printing machinery. With regard to newspaper printing machinery, owing to the size of a high-speed newspaper printing press making such an exhibit impossible for a short period exhibition, Messrs. Crabtree are showing a patent folding mechanism, with adjustments for setting and timing. The adjustments for the folding and drawing rollers are placed outside the front frame. The count is distinctive, and may be arranged for different quantities to the quire. The folding cylinders are of special construction, and provided with heavy steel shafts and oil ring bearings of extra length and size. A plate cylinder of a special rigid design, and mounted on high tensile steel shaft, may also be seen. The cylinder and its journals are both ground to the finest limits. The dogways are milled from the solid by special machinery. Margin rings are recessed into the cylinder. A quick plate lock is provided, operating on a semi-circular ring of special formation which engages positively with the plate bevel, and prevents distortion of the plate. An impression cylinder on view is so made that any spring at the "gap" is prevented. A quick blanket lock is provided, obviating the use of blanket pins, the blankets being fastened to their bars outside the cylinder. These cylinders are also ground to limits grooved for "bolster" and mounted on steel shafts, which are pressed in hydraulically. In both type and impression cylinders special care is taken to obtain perfect balance. The impression cylinder bearings are set for impression by means of readily accessible wedges. In offset machinery there is a quad demy two-colour "Ensign" super offset. This machine is shown fitted with "Cross" automatic feeder, and is guaranteed for speeds up to 3,000 per hour. Noticeable features are the check motion to all parts, including patent feed check, patent spring gripper, no cylinder brakes, patent eccentric roller sockets, intermediate inking distribution, adjustable reciprocation, single bar plate clamps with positive side adjustment, and strictly P.S.U. delivery to falling pile. A demy two-colour "Ensign" super offset, with all the main features of the above, is shown on a miniature scale; also a demy folio single-colour "Ensign" super offset of an absolutely complete lithographic design in miniature. A new patent proofing and reversing bed, for use in transfer presses, is another interesting feature.

Cross Paper Feeder Co., Ltd.

The Cross Paper Feeder Co., Ltd., are showing six of their Cross continuous automatic feeders in the Exhibition, three on rotary offsets, two on letterpress machines and one on a folding machine. This firm have now over 900 Cross feeders at work in this country, one firm alone having 131. These feeders are made in London by British workmen and customers have the benefit of a free service and advice of experienced and highly trained mechanical and technical experts and operators. This is obviously a point that should have considerable weight with a customer in making a choice of feeders. All parts of a Cross feeder are made in bulk to standard gauges and templates. Every piece is numbered and described, so that when any duplicate is required it can be supplied immediately from the finished stores at the works or office in London, where a large stock of parts are always kept for delivery on receipt of 'phone message or telegram giving the number of the part required. All parts of a Cross feeder are interchangeable and do not require any fitting in cases of replacement of worn or broken parts. The Cross Paper Feeder Co. claim that they are the largest manufacturers of automatic feeders in the world and that the service they give to customers is unrivalled.

Day's Shading Mediums.

The Ben Day Shading Mediums, which are shown on a stand in the Gallery, form part of the equipment of nearly every important lithographic or photo-engraving establishment of the present day. In the photo-engraving field, for the production of plate drawings for high-class commercial advertising purposes, the Day medium is an indispensible adjunct, particularly for colour work reproduction. The mediums supplied represent a wide range of line tints, hand and mechanical stipples, fine half-tone tints, and grain and textures, the latter specially adaptable for fashion illustrations or background effects for bold letter advertisements. For the practicable application of the mediums there are two types of registry apparatus, the weighted holdfast type, adjustable to the varying levels required for working on lithographic surfaces; and the drawing board type for photo-engraving work, on cardboard; or direct process on copper or zinc. By the use of the micrometric adjusters, which are factors of both types of registry apparatus, the lines, stipples, etc., of the shading mediums, after being inked, may be laid, or transferred in accurate registry. The drawing is constantly in view through the transparent shading medium while the operator is working; that is, transferring by a stylus or a pressure roller the inked shading tint from the medium to the drawing surface. Should varying strengths of tone be required in the same tint, the medium may be detached, re-inked and readjusted after each lay or print, and the micrometric adjusters, capable of the finest shift movements for such graduations, may be moved to effect any range of increased colour effect or any variety of pattern that the artist's motive may direct. The Ben Day Shading Medium complement is supplied at an annual rental, which includes a wide selection of mediums, which may be exchanged or replaced at desire.

Edwin W. Evans.

A unique exhibit of great interest to the trade is arranged by Mr. Edwin W. Evans, the well-known printers' auctioneer and valuer, newspaper valuer and assessor. He is exhibiting various detailed specimen inventories of letterpress and lithographic printing, bookbinding, box-making and engraving plants, which show how thoroughly the work is accomplished, being detailed and individually priced even to the smallest article. One of Mr. Evans's representatives is available at all times at his Stand, and will gladly furnish advice upon fire insurance and valuatory matters.

Federation of Master Process Engravers.

This Federation has taken the North Gallery Annexe for a combined exhibit in which 14 firms are showing actual specimens. In addition, there is a Federation exhibit of the stages of process block-making and the materials used in production. Beautiful specimens of all classes of process engravings are shown in both black and white and in three and four colours. There are examples of fine catalogue work suitable for all kinds of manufactures, magazine and newspaper illustrations in both half-tone and line, together with all that is best in modern advertising art, in which illustration plays such a prominent part. Commercial photography, exquisite air-brush retouching, designing for commercial and decorative purposes; in fact, illustrations of all kinds and for all uses are comprised in the display. The houses that specialise in photogravure are showing some of their best work in this class of reproduction which is finding such a welcome with various sections of the public.

A. Chris. Fowler.

Messrs. A. Chris. Fowler are exhibiting framed specimens of three and four-colour printing, on coated and uncoated papers. These specimens were picked at random from work executed in the ordinary course of business, and show the high quality of work and attention to detail maintained by the firm. Messrs. Fowler have had nearly thirty years' experience of this special branch of printing, and their reputation stands high among trade houses.

Oscar Friedheim and Co., Ltd.

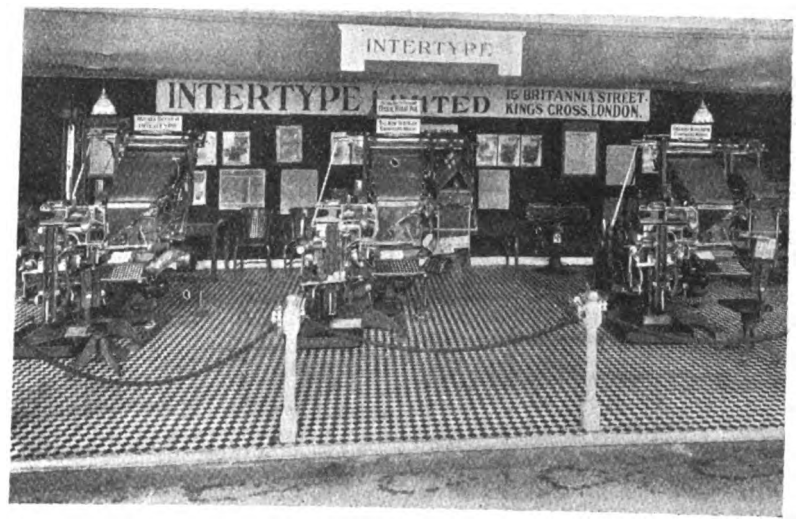
This firm is not only exhibiting a good selection of machinery in the Exhibition, but also announce a special showing at their own showrooms, 25, Water-lane, E.C.4. At the Exhibition they show amongst various other machines for bookbinders, their latest machinery for book-sewing and thread stitching. These new models embody all the latest and most up-to-date improvements, and the machines are shown in actual operation on the Stand, demonstrations of the working of same being given to visitors. The "Martini" simplified book-sewing machine is capable of

Digitized by Google

doing every variety of sewing, over tape and through tape of various widths, also plain (French) sewing. This machine is of new construction—without stitching heads. Needle heads having been entirely eliminated, it is possible for the stitches to be brought much closer together than hitherto, and many more stitches can be sewn into a book, thereby giving greater strength. The "Martini" thread-stitching and knotting machine No. A505 is specially designed for stitching with thread all classes of work hitherto stitched by wire—exercise books, note and memorandum books, pamphlets, and all sectional work of a similar character. The machine is capable of stitching from a single sheet up to ¼ in. thickness without adjustment, and produces 2 in. and 3 in. single stitches, also 3 in., 4 in., and 5 in. three-hole double stitch, and in addition a corner hanging loop. The machine is supplied with a saddle for book work and a flat table for block work, showcard looping or stringing, and it is capable of working with mercerised silk thread, cord, down to thin cotton. It is manufactured in two models.

Fry's Metal Foundry.

The exhibit by Fry's Metal Foundry will be found at Stand 2, Row C—just inside the Main Hall and the same position as at the last Exhibition. Their printing metal service has two main features—supplying metal of



Fry's Dross Container,

unassailable quality and assisting the printer to retain that quality and to secure the best results from it. The means by which "Fryotype" quality is attained and the highly scientific methods which are used are illustrated. A series of specimens and photomicrographs will interest all who desire to know *why* particular alloys are most suitable for certain jobs—why, for instance, linotype metal will not cast a good stereo plate and why a small trace of an impurity (perhaps less than a tenth of 1 per cent.) will entirely spoil a metal. Those in charge of the stand are prepared to discuss with customers their own particular problems—if they have any. Questions such as the melting loss on metal—which may vary from 1 to 5 per cent.—and how to keep metal always up to standard, are important, and users will find ready assistance in such matters. The danger to health from dross is rightly receiving the attention of the trade at the present time. The Exhibition is an excellent opportunity of seeing Fry's Dross Container (illustrated herewith), a most efficient safeguard against lead poisoning, which has already been adopted in many offices. "Fryotype" melting pots and foundry equipment is in operation frequently, demonstrating the most rapid and economical means of ingotting type and slugs and methods of cleaning metal. Consistently good results in stereotyping and from composing machines are so largely dependent on correct and uniform casting temperature that the group of pyrometers on the stand form a particularly interesting feature. These are the only really accurate and reliable instruments for measuring the temperature of printing metals. Among the exhibits of spacing material, brass rule, etc., should be seen the example of a pica plate mounted on quotations—an accurate, rigid mount, incapable of warping. There is one other outstanding exhibit—a forme of monotype matter cast from standard "Fryotype" metal which has stood up to a run of 550,000. That is believed to be a record and is a fine tribute to the high quality of Fry's metal.

Intertype Limited.

The Intertype exhibit is at Stand 3, Row C, Gilbey Hall. The company are showing a battery of four machines equipped for the composition of all classes of letterpress printing work, including text, display, headlines, borders, leads, tabular work and rules, for newspaper, magazine, jobbing, book work, catalogues, tables and commercial forms. The exhibit is confined to composing machinery, as Intertype Limited concentrate their activities on this, but supplies which are sold for use on other slug casting composing machines are shown. These supplies include Intertype matrices, border slides, spacebands and many machine parts. Special attention is given to illustrating the setting of display composition on Intertypes. Machines are shown specially equipped for display as they are when supplied to some of the largest jobbing houses in the country, and also equipped for text and display as they are when supplied to small printing offices which have one Intertype composing machine as the total equipment of their composing department. The range of the Intertype display machine is from 4 to 42 pica ems in sizes of from 5 to 60 point. The

following Intertype features will also be demonstrated: The keyboard touch, which, owing to simplified construction, is much lighter than some types of composing machine; the ball-bearing positive assembler and sensitive chute spring, which make transposition of the matrices practically impossible; the screw-bearing knife block, which makes for faster changes and more accurate setting, especially when odd sizes are needed; the sensitive gas governor and improved metal pot and mouthpiece, which make for greater capacity, more even temperature of metal, and consequently better slugs; Intertype moulds, which are more conveniently place, change more readily, and are cleaner in operation; Intertype universal ejector, in which solid blades take the place of the customary sectional blades to great advantage; Intertype matrices, which are designed and constructed to give greater freedom during distribution and a straighter drop into the magazine, eliminating distribution faults; spacebands and spaceband box mechanism and the improvements in same, which allow for four different thicknesses to be used with ease and with no fear of clogging.

T. G. and J. Jubb.

This well-known metal firm are to be found at Stand No. 13, Row B, Main Hall. They are as usual "on their metal," with specimens of their product kindly lent by their customers all over the country. They are showing rotary plates cast by Junior Autoplate machines and the Winkler patent automatic casting machine, flat plates, formes of monotype and lino slugs—all cast from Jubb's metal. The varieties of type borders, plates and formes used in printing are on view. All the plates shown on the wall of Jubb's stand are cast from their metal. There is also shown their machine cast leads, clumps, furniture and quotations. They show, too, their lino-cleansing tablets—"the operator's friend."

John Kidd and Co., Ltd.

With over one hundred years' experience behind them, it is not to be wondered at that Messrs. John Kidd and Co., Ltd., retain their prominent position in the printing ink world. Always progressive, their manufactures include inks suitable for every known printing process, and, of course, the celebrated "Resilient" rollers, which are more popular than ever owing to greatly improved methods of manufacture. At Stand No. 9, Row B, Main Hall, examples of very fine colour printing produced by printers using their inks and rollers will be found. Consisting mainly of artistic specimens of process printing and offset work, this stand should be of great interest to "quality" printers.

W. J. Light and Co., Ltd.

Messrs. Winkler Fallert and Co., Ltd. (for whom Messrs. W. J. Light and Co., Ltd., are the British agents) specialise chiefly in the manufacture of high-class stereotyping machinery for newspapers and general printers. Of particular interest to visitors to the Exhibition will be the following machines:—"Winkler" patent automatic stereo plate casting machine, which is the first and only machine having a direct connection between casting box and metal pot; casts by gravity, under the head of the whole contents of the metal pot; casts plates without a "tail" and without the necessity of subsequent shaving, trimming, or hand-finishing, and requires no pumps. "Winkler" patent automatic moulding and drying press, which equals in capacity three pneumatic presses. The matrix is moulded and dried in one operation, the drying taking place under reduced pressure (patent). The moisture is extracted by a suction pump. The temperature is automatically controlled and the electric current is automatically switched on and off at set times. It produces in conjunction with Light's "Photo-Tone" fine art flong, half-tone matrices of finest screen so accurate that stereos cast therefrom are facsimile to originals. Perfect depth is assured. "Winkler" patent flat plate milling machine, which is equally suitable for finishing type-high and plate-high work with the greatest degree of accuracy. It combines the functions of two different appliances—the roughing

The machines shown include one of a design which has excited much controversy but has proved its utility wherever installed—the two-colour superimposed single blanket machine. This machine is equipped with independent damping units for each colour, and fitted with an automatic pile feeder of the Dexter make. Quad demy in size, it is able to run at a speed of 3,000 per hour, register secured on the blanket being microscopically exact and permanent. Another interesting exhibit is a quad demy two-colour machine, new style, having one large cylinder with two impression surfaces, two plate cylinders and two blanket cylinders of half the diameter. Two sheets are always in transit. Independent damping units are fitted for each colour, and the speed of this machine in two colours is about 2,500 per hour. On the same stand is a perfecting offset machine, quad demy in size, with two plate cylinders and two blanket cylinders, all of the same diameter. The blanket cylinders run in contact and form the impression cylinders, printing both sides of the paper simultaneously; the plates therefore are both made up positive in character; the weight of colour is rigidly maintained as no transfer of impression is made. Independent damping unit is fitted to each plate cylinder. Other features of this notable exhibit are: Single colour offset machine, double demy in size, of an entirely new design, built of an intensely massive and rigid construction, to run at a speed of 4,000 per hour; No. 1, medium single colour offset machine, to print a sheet 23½ in. by 18½ in., with a self contained piling delivery and automatic pile type feeder, making a perfect unit and running at a speed of 4,000 per hour; sheet fed photogravure machine, to print a sheet 23½ in. by 31½ in., speed 3,000 per hour automatically fed, specially designed for register colour work, and incorporating a patented compensated cylinder ensuring register, notwithstanding the repeated grinding of the copper cylinder; offset proving and reversing press, 23½ in. by 18½ in. which offers special facilities; automatic fed rotary carton punching, creasing and slitting machine, entirely new in design, speed 3,000 sheets per hour, quad crown; double beam precision cardboard cutting and creasing machine; vertical carton punching machine; union patent centric gear camera for half-tone and photo-litho, 24 in. by 24 in., having many new features; union all steel volute spring camera stand, of a new and specially attractive design; Union steel face-up printing frame, with automatic rising front, quad demy; Union printing frame, wood, 23½ in. by 18 in., with hinged face.

Canadian American Machinery Co., Ltd.

A comprehensive range of their British-built folding machines, notably the Cleveland folder, will interest visitors to the Stand of

The Cleveland Folder.

the Canadian American Machinery Co., Ltd. They are now building a miniature Cleveland folder, which, while taking only a crown sheet, embodies all the advantages of the Cleveland system, and the same versatility on a smaller scale and capacity for handling not only ordinary folds, but distinctive folds which are otherwise designated as "hand folds." Various models of folders ranging from quad crown down to demy folio are being shown, so that there should be no difficulty in finding a model to suit every requirement. They are also exhibiting the well-known Kelly presses. The two-revolution Kelly appears to be gaining considerable popularity in this country owing to the speed and excellence of the work, whether ordinary commercial jobbing, or high-class colour work.

R. W. Crabtree and Sons, Ltd.

The exhibit of Messrs. R. W. Crabtree and Sons, Ltd., at Stands 4 and 5, Row D, Main Hall, consists of two sections, one devoted to newspaper printing machinery and one to offset printing machinery. With regard to newspaper printing machinery, owing to the size of a high-speed newspaper printing press making such an exhibit impossible for a short period exhibition, Messrs. Crabtree are showing a patent folding mechanism, with adjustments for setting and timing. The adjustments for the folding and drawing rollers are placed outside the front frame. The count is distinctive, and may be arranged for different quantities to the quire. The folding cylinders are of special construction, and provided with heavy steel shafts and oil ring bearings of extra length and size. A plate cylinder of a special rigid design, and mounted on high tensile steel shaft, may also be seen. The cylinder and its journals are both ground to the finest limits. The dogways are milled from the solid by special machinery. Margin rings are recessed into the cylinder. A quick plate lock is provided, operating on a semi-circular ring of special formation which engages positively with the plate bevel, and prevents distortion of the plate. An impression cylinder on view is so made that any spring at the "gap" is prevented. A quick blanket lock is provided, obviating the use of blanket pins, the blankets being fastened to their bars outside the cylinder. These cylinders are also ground to limits grooved for "bolster" and mounted on steel shafts, which are pressed in hydraulically. In both type and impression cylinders special care is taken to obtain perfect balance. The impression cylinder bearings are set for impression by means of readily accessible wedges. In offset machinery there is a quad demy two-colour "Ensign" super offset. This machine is shown fitted with "Cross" automatic feeder, and is guaranteed for speeds up to 3,000 per hour. Noticeable features are the check motion to all parts, including patent feed check, patent spring gripper, no cylinder brakes, patent eccentric roller sockets, intermediate inking distribution, adjustable reciprocation, single bar plate clamps with positive side adjustment, and strictly P.S.U. delivery to falling pile. A demy two-colour "Ensign" super offset, with all the main features of the above, is shown on a miniature scale; also a demy folio single-colour "Ensign" super offset of an absolutely complete lithographic design in miniature. A new patent proofing and reversing bed, for use in transfer presses, is another interesting feature.

Cross Paper Feeder Co., Ltd.

The Cross Paper Feeder Co., Ltd., are showing six of their Cross continuous automatic feeders in the Exhibition, three on rotary offsets, two on letterpress machines and one on a folding machine. This firm have now over 900 Cross feeders at work in this country, one firm alone having 131. These feeders are made in London by British workmen and customers have the benefit of a free service and advice of experienced and highly trained mechanical and technical experts and operators. This is obviously a point that should have considerable weight with a customer in making a choice of feeders. All parts of a Cross feeder are made in bulk to standard gauges and templates. Every piece is numbered and described, so that when any duplicate is required it can be supplied immediately from the finished stores at the works or office in London, where a large stock of parts are always kept for delivery on receipt of 'phone message or telegram giving the number of the part required. All parts of a Cross feeder are interchangeable and do not require any fitting in cases of replacement of worn or broken parts. The Cross Paper Feeder Co. claim that they are the largest manufacturers of automatic feeders in the world and that the service they give to customers is unrivalled.

Day's Shading Mediums.

The Ben Day Shading Mediums, which are shown on a stand in the Gallery, form part of the equipment of nearly every important lithographic or photo-engraving establishment of the present day. In the photo-engraving field, for the production of plate drawings for high-class commercial advertising purposes, the Day medium is an indispensible adjunct, particularly for colour work reproduction. The mediums supplied represent a wide range of line tints, hand and mechanical stipples, fine half-tone tints, and grain and textures, the latter specially adaptable for fashion illustrations or background effects for bold letter advertisements. For the practicable application of the mediums there are two types of registry apparatus, the weighted holdfast type, adjustable to the varying levels required for working on lithographic surfaces; and the drawing board type for photo-engraving work, on cardboard; or direct process on copper or zinc. By the use of the micrometric adjusters, which are factors of both types of registry apparatus, the lines, stipples, etc., of the shading mediums, after being inked, may be laid, or transferred in accurate registry. The drawing is constantly in view through the transparent shading medium while the operator is working; that is, transferring by a stylus or a pressure roller the inked shading tint from the medium to the drawing surface. Should varying strengths of tone be required in the same tint, the medium may be detached, re-inked and readjusted after each lay or print, and the micrometric adjusters, capable of the finest shift movements for such graduations, may be moved to effect any range of increased colour effect or any variety of pattern that the artist's motive may direct. The Ben Day Shading Medium complement is supplied at an annual rental, which includes a wide selection of mediums, which may be exchanged or replaced at desire.

Edwin W. Evans.

A unique exhibit of great interest to the trade is arranged by Mr. Edwin W. Evans, the well-known printers' auctioneer and valuer, newspaper valuer and assessor. He is exhibiting various detailed specimen inventories of letterpress and lithographic printing, bookbinding, box-making and engraving plants, which show how thoroughly the work is accomplished, being detailed and individually priced even to the smallest article. One of Mr. Evans's representatives is available at all times at his Stand, and will gladly furnish advice upon fire insurance and valuatory matters.

Federation of Master Process Engravers.

This Federation has taken the North Gallery Annexe for a combined exhibit in which 14 firms are showing actual specimens. In addition, there is a Federation exhibit of the stages of process block-making and the materials used in production. Beautiful specimens of all classes of process engravings are shown in both black and white and in three and four colours. There are examples of fine catalogue work suitable for all kinds of manufactures, magazine and newspaper illustrations in both half-tone and line, together with all that is best in modern advertising art, in which illustration plays such a prominent part. Commercial photography, exquisite air-brush retouching, designing for commercial and decorative purposes; in fact, illustrations of all kinds and for all uses are comprised in the display. The houses that specialise in photogravure are showing some of their best work in this class of reproduction which is finding such a welcome with various sections of the public.

A. Chris. Fowler.

Messrs. A. Chris. Fowler are exhibiting framed specimens of three and four-colour printing, on coated and uncoated papers. These specimens were picked at random from work executed in the ordinary course of business, and show the high quality of work and attention to detail maintained by the firm. Messrs. Fowler have had nearly thirty years' experience of this special branch of printing, and their reputation stands high among trade houses.

Oscar Friedheim and Co., Ltd.

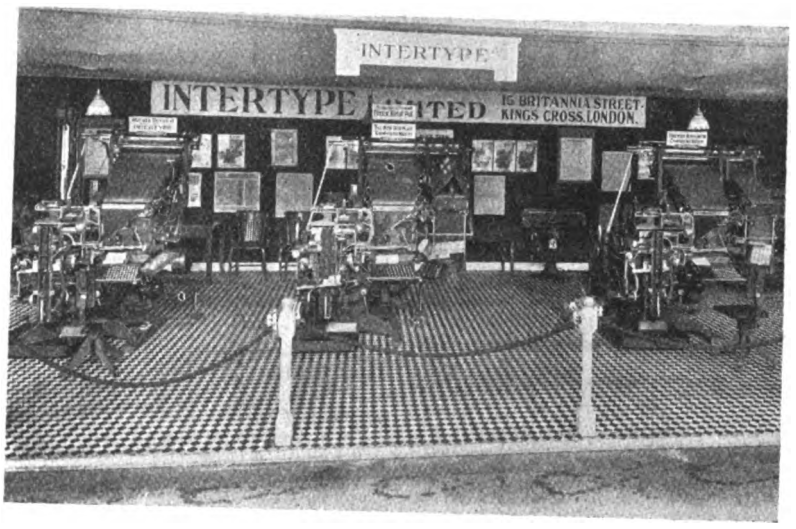
This firm is not only exhibiting a good selection of machinery in the Exhibition, but also announce a special showing at their own showrooms, 25, Water-lane, E.C.4. At the Exhibition they show amongst various other machines for bookbinders, their latest machinery for book-sewing and thread stitching. These new models embody all the latest and most up-to-date improvements, and the machines are shown in actual operation on the Stand, demonstrations of the working of same being given to visitors. The "Martini" simplified book-sewing machine is capable of

Digitized by Google

doing every variety of sewing, over tape and through tape of various widths, also plain (French) sewing. This machine is of new construction—without stitching heads. Needle heads having been entirely eliminated, it is possible for the stitches to be brought much closer together than hitherto, and many more stitches can be sewn into a book, thereby giving greater strength. The "Martini" thread-stitching and knotting machine No. A505 is specially designed for stitching with thread all classes of work hitherto stitched by wire—exercise books, note and memorandum books, pamphlets, and all sectional work of a similar character. The machine is capable of stitching from a single sheet up to ¼ in. thickness without adjustment, and produces 2 in. and 3 in. single stitches, also 3 in., 4 in., and 5 in. three-hole double stitch, and in addition a corner hanging loop. The machine is supplied with a saddle for book work and a flat table for block work, showcard looping or stringing, and it is capable of working with mercerised silk thread, cord, down to thin cotton. It is manufactured in two models.

Fry's Metal Foundry.

The exhibit by Fry's Metal Foundry will be found at Stand 2, Row C—just inside the Main Hall and the same position as at the last Exhibition. Their printing metal service has two main features—supplying metal of



Fry's Dross Container.

unassailable quality and assisting the printer to retain that quality and to secure the best results from it. The means by which "Fryotype" quality is attained and the highly scientific methods which are used are illustrated. A series of specimens and photomicrographs will interest all who desire to know *why* particular alloys are most suitable for certain jobs—why, for instance, linotype metal will not cast a good stereo plate and why a small trace of an impurity (perhaps less than a tenth of 1 per cent.) will entirely spoil a metal. Those in charge of the stand are prepared to discuss with customers their own particular problems—if they have any. Questions such as the melting loss on metal—which may vary from 1 to 5 per cent.—and how to keep metal always up to standard, are important, and users will find ready assistance in such matters. The danger to health from dross is rightly receiving the attention of the trade at the present time. The Exhibition is an excellent opportunity of seeing Fry's Dross Container (illustrated herewith), a most efficient safeguard against lead poisoning, which has already been adopted in many offices. "Fryotype" melting pots and foundry equipment is in operation frequently, demonstrating the most rapid and economical means of ingotting type and slugs and methods of cleaning metal. Consistently good results in stereotyping and from composing machines are so largely dependent on correct and uniform casting temperature that the group of pyrometers on the stand form a particularly interesting feature. These are the only really accurate and reliable instruments for measuring the temperature of printing metals. Among the exhibits of spacing material, brass rule, etc., should be seen the example of a pica plate mounted on quotations—an accurate, rigid mount, incapable of warping. There is one other outstanding exhibit—a forme of monotype matter cast from standard "Fryotype" metal which has stood up to a run of 550,000. That is believed to be a record and is a fine tribute to the high quality of Fry's metal.

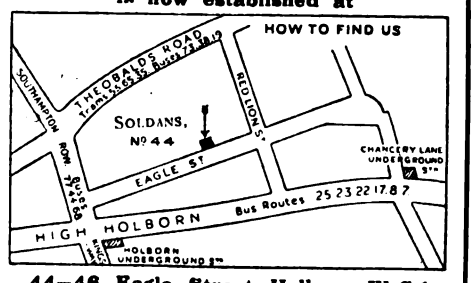
Intertype Limited.

The Intertype exhibit is at Stand 3, Row C, Gilbey Hall. The company are showing a battery of four machines equipped for the composition of all classes of letterpress printing work, including text, display, headlines, borders, leads, tabular work and rules, for newspaper, magazine, jobbing, book work, catalogues, tables and commercial forms. The exhibit is confined to composing machinery, as Intertype Limited concentrate their activities on this, but supplies which are sold for use on other slug casting composing machines are shown. These supplies include Intertype matrices, border slides, spacebands and many machine parts. Special attention is given to illustrating the setting of display composition on Intertypes. Machines are shown specially equipped for display as they are when supplied to some of the largest jobbing houses in the country, and also equipped for text and display as they are when supplied to small printing offices which have one Intertype composing machine as the total equipment of their composing department. The range of the Intertype display machine is from 4 to 42 pica ems in sizes of from 5 to 60 point. The

following Intertype features will also be demonstrated: The keyboard touch, which, owing to simplified construction, is much lighter than some types of composing machine; the ball-bearing positive assembler and sensitive chute spring, which make transposition of the matrices practically impossible; the screw-bearing knife block, which makes for faster changes and more accurate setting, especially when odd sizes are needed; the sensitive gas governor and improved metal pot and mouthpiece, which make for greater capacity, more even temperature of metal, and consequently better slugs; Intertype moulds, which are more conveniently place, change more readily, and are cleaner in operation; Intertype universal ejector, in which solid blades take the place of the customary sectional blades to great advantage; Intertype matrices, which are designed and constructed to give greater freedom during distribution and a straighter drop into the magazine, eliminating distribution faults; spacebands and spaceband box mechanism and the improvements in same, which allow for four different thicknesses to be used with ease and with no fear of clogging.

T. C. and J. Jubb.

This well-known metal firm are to be found at Stand No. 13, Row B, Main Hall. They are as usual "on their metal," with specimens of their product kindly lent by their customers all over the country. They are showing rotary plates cast by Junior Autoplate machines and the Winkler patent automatic casting machine, flat plates, formes of monotype and lino slugs—all cast from Jubb's metal. The varieties of type borders, plates and formes used in printing are on view. All the plates shown on the wall of Jubb's stand are cast from their metal. There is also shown their machine cast leads, clumps, furniture and quotations. They show, too, their lino-cleansing tablets—"the operator's friend."



John Kidd and Co., Ltd.

With over one hundred years' experience behind them, it is not to be wondered at that Messrs. John Kidd and Co., Ltd., retain their prominent position in the printing ink world. Always progressive, their manufactures include inks suitable for every known printing process, and, of course, the celebrated "Resilient" rollers, which are more popular than ever owing to greatly improved methods of manufacture. At Stand No. 9, Row B, Main Hall, examples of very fine colour printing produced by printers using their inks and rollers will be found. Consisting mainly of artistic specimens of process printing and offset work, this stand should be of great interest to "quality" printers.

W. J. Light and Co., Ltd.

Messrs. Winkler Fallert and Co., Ltd. (for whom Messrs. W. J. Light and Co., Ltd., are the British agents) specialise chiefly in the manufacture of high-class stereotyping machinery for newspapers and general printers. Of particular interest to visitors to the Exhibition will be the following machines:—"Winkler" patent automatic stereo plate casting machine, which is the first and only machine having a direct connection between casting box and metal pot; casts by gravity, under the head of the whole contents of the metal pot; casts plates without a "tail" and without the necessity of subsequent shaving, trimming, or hand-finishing, and requires no pumps. "Winkler" patent automatic moulding and drying press, which equals in capacity three pneumatic presses. The matrix is moulded and dried in one operation, the drying taking place under reduced pressure (patent). The moisture is extracted by a suction pump. The temperature is automatically controlled and the electric current is automatically switched on and off at set times. It produces in conjunction with Light's "Photo-Tone" fine art flong, half-tone matrices of finest screen so accurate that stereos cast therefrom are facsimile to originals. Perfect depth is assured. "Winkler" patent flat plate milling machine, which is equally suitable for finishing type-high and plate-high work with the greatest degree of accuracy. It combines the functions of two different appliances—the roughing

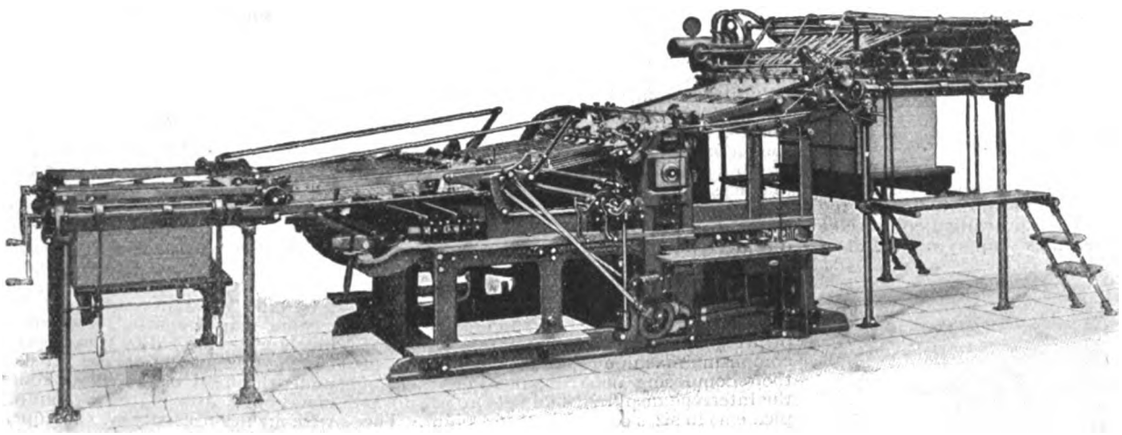
THE HOUSE OF SOLDAN
is now established at

44–46, Eagle Street, Holborn, W.C.1.
Specialists in Machinery and Processes for the Printing and Allied Trades.

Digitized by Google

machine and the shaving machine—because it mills the plate, *in one operation*, down to the desired height, thereby saving labour, time and power. Plates milled on the "Winkler" are guaranteed to be true to less than a thousandth of an inch throughout. "Winkler" patent automatic ingot caster for re-melting, mixing, refining, and ingot-casting all printers' metals (slugs, type, stereo-plates, etc.). "Winkler" automatic rotary matrix dryer. "Winkler" automatic sheet feeder, which is equally suitable for short and long runs, because it enables a rapid change of jobs.

Linotype and Machinery, Ltd.

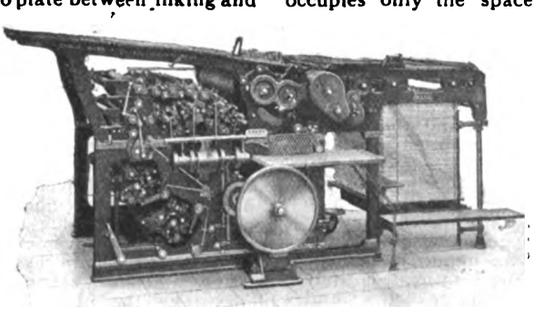


Notable exhibits by this famous firm are to be found on three different stands. On Stand No. 4 in Row D, which is right in the centre of the Main Hall, under the L & M sign, are seven Linotype composing machines, all of them of the multiple magazine type. Several of these Linotype models have not hitherto been shown at a general trade exhibition, and two of them are now on exhibition for the first time. The standard magazine equipment of these machines varies between three and eight magazines. Every effort has been made to make this exhibit of Linotypes as practical as possible to visitors; whether they be book, general jobbing, or newspaper printers they will find a machine equipped to suit their particular requirements. On the same stand is the L & M Perfector, now shown for the first time. On Stand No. 5 in Row C, which is adjacent to the above mentioned stand, are exhibits of more particular interest to newspaper printers, including the new Pony Autoplate, which, although only recently introduced, has already proved to be the particular type of machine which many newspaper proprietors in Great Britain needed. This machine can be seen running under practical working conditions. Other exhibits on this stand are the L & M Matrix Mangle and the L & M Matrix Dryer. This company's well known Automatic Metal Furnace in two sizes is also represented. Other printing, letterpress and litho machines, manufactured by this well known company will be found on Stand No. 4, Row F, where there will be found a No. 4 Miehle with L & M Automatic Feeder and Pile Delivery, a No. 2 Offset with Pile Delivery, a Centurette with Pile Delivery, and a No. 4 L & M Two-Revolution Press. This is the first occasion on which the L & M Feeder has been shown, and as this Feeder has special features peculiar to itself, a brief description of it will undoubtedly be read with interest. This machine is made in six sizes, ranging from about ex eight crown to double demy. The machine shown is a No. 4. An important feature of the feeder is an arrangement whereby it is unnecessary to disturb the pile of sheets when printing the reverse side. To feed the sheets and turn them over, the pile is put into the feeder with the leading edge towards the outer feed roll. By this means the sheets are automatically reversed and come down on to the feed board the right way up—thus there is no repiling or turning over of sheets by hand, or repiling and turning when working a third colour on either side. The pile feed board and pile delivery board are interchangeable with each other.

Lorilleux and Bolton, Ltd.

The form of the exhibit of this house, at Stand No 5, Row G, Main Hall, is of special interest to printers in whatever printing process they may be engaged. Specimens of printing in every process are shown, the inks used being suitable and specially made for the particular process of printing by which the specimen has been printed. In addition to this series, a collection of specimens in all processes is being shown, which have been printed in the ordinary course of work by customers, the inks used having been supplied by L. and B., Ltd. Wherever possible, actual work is shown, this being a more accurate guide to inquirers for the firm's products. All the firm's well known specialities in driers, reducers, and ink doctors are also available for inspection. Samples of all specialities apart from inks are stocked at the Exhibition Stand, and applications for samples will be welcomed. A competent staff is in attendance, and experts will gladly welcome any special inquiries on colour and technical matters connected with the printing trade in all its branches. Every effort is being made to make the exhibit of real use to printers in whatever class of work they may be interested.

George Mann and Co., Ltd.

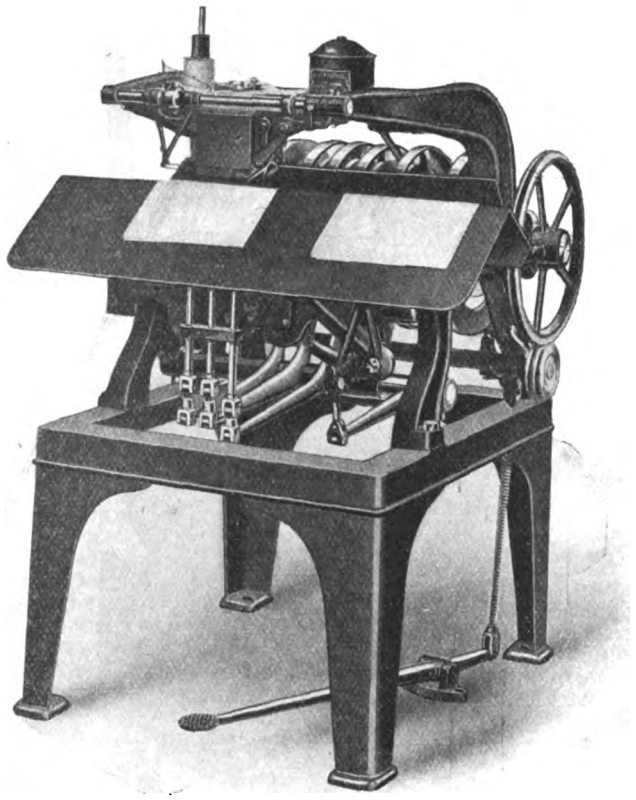


The very latest lithographic machinery will be exhibited by this firm on Stands 5 and 6, Row F, in the Main Hall. Their display will range from an eight crown two-colour and perfecting rotary offset machine, down to a demy folio single colour rotary offset, including machines for tin plate decorating. Messrs. George Mann specially bring to the notice of printers their very unique two-colour and perfecting rotary offset. This machine is fitted with independent damping units to each plate, and has only three main cylinders, two being full sized plate and blanket cylinders, and the other a half sized or two-revolution impression cylinder. This combination of three cylinders is regarded as a master patent, and embodies the following special advantages: Easy accessibility to plate between inking and damping units; delivery of sheet printed side upwards at a very convenient height for inspection; damping units away from the feed board and situated below inking; either damping unit may be used to damp both plates or only one plate; ink ducts at a convenient height for inspection, in close proximity to each other. A very important feature of Messrs. George Mann's display is the only machine with three cylinders which will print either two colours on the front of the sheet; same colour front and back (perfecting); different colour front and back (perfecting); or single colour front or back. The illustration herewith will show that the machine is well built on sturdy lines with a well defined outline. The frame sides are strongly braced together, giving the machine the maximum amount of rigidity, thereby eliminating all tendency to vibration. To change the machine from a two-colour to a perfector requires but three adjustments, such adjustments being so simple that a boy could manipulate them in a few minutes. Without doubt, simplicity is the most striking feature of all Mann machines. Only a minimum amount of tuition is required to enable an average minder to produce the best results. All sizes of this machine can be fitted with any standard type of automatic feeder. The quality of the work produced is excellent, and the speed of production leaves nothing to be desired. Messrs. George Mann inform us that a hearty welcome awaits visitors at their stands, where may be seen the result of over fifty years' labour in the interests of lithographic machinery.

A Miehle with Automatic Feeder and Pile Delivery.

Miehle Printing Press and Manufacturing Co., Ltd.

The Miehle Printing Press and Manufacturing Co., Ltd., are showing at their Stand, No. 2, Row B, Gilbey Hall, examples of the American Miehle Co.'s latest fully automatic printing presses which have been designed to meet the demands of discerning printers for machines that will eliminate many annoying and unproductive operations which have hitherto been regarded as inseparable from the work undertaken in the machine-room. A prominent item is the American Miehle's Co.'s Vertical Job Press, guaranteed to print in the closest possible register throughout its speed range, varying from 2,000 to 3,600 per hour. It will print any size of sheet from a post card to a sheet measuring 13½ in. by 19 in.; its inking capacity and impressional strength are sufficient for the satisfactory printing of the largest forme the machine will accommodate; it occupies only the space of an equivalent sized platen machine and is manned by a single operator; it is completely automatic and is suitable for the printing of practically every kind of job within the limits of its size which a printer may be called upon to undertake. Another notable exhibit is the American Miehle Co.'s No. 4 four roller fully automatic press, complete with printing machine, pile type of suction feeder, combination extension delivery and lowering table, and electrical equipment. The minimum and maximum sheet sizes of this press are 17 by 11 and 40 by 27 respectively and the maximum speed is 2,400 per hour. The American Miehle Co. are showing also their fully automatic pony press, complete with printing machine, Cross



Mann Two-Colour and Perfecting Rotary Offset.

Digitized by Google

continous feeder, combination extension delivery and lowering table and electrical equipment. The minimum and maximum sheet sizes of this press are 11 by 8¾ and 35 by 22½ respectively and the maximum speed is 2,850 per hour. Though concentrating their energies in this exhibit to facilitating the printers' investigation of high speed automatic machines of the smaller type, the Miehle Printing Press and Manufacturing Co., Ltd., will be happy to furnish any printers who visit their stand with full particulars of the American Miehle Co.'s two-colour two-revolution press, also to explain a new-comer in the range of American Miehle Co.'s presses, the American Miehle Co.'s cutting and creasing press.

John T. Marshall.

The firm of John T. Marshall (proprietor, John T. Hircock) shows at Stand No. 7, Row C., Gilbey Hall, an important series of machines for printers, bookbinders and others. Prominent is the "Marshall" (improved Elliott) thread-stitching, looping and stringing machine, for stitching books with a two or three-hole stitch, tying a secure double reef knot, also for cording calendars, show cards' etc. It claims to be the only British owned and built stitching and looping machine. Another notable machine (shown for the first time) is a printing machine for envelopes (Guy's Patent) for printing on the face or flap, or face and flap at one operation. This machine will be found very useful by those firms who specialise in printing on envelopes, seed bags, and the like. It automatically feeds the envelope, opens the flap, prints it and afterwards closes the flap ready for packing. There are certain envelopes or bags that are made of stout material, flap left open—this machine will crease the flap and fold it over after printing. It has a special device for tripping the impression cylinder should the machine fail to feed an envelope. The machine will also print on post cards, and the like. Other machines by this firm include printing attachment for envelopes (Guy's Patent), for fitting to any existing envelope-folding machine; "Marshall" case-rounding machine, for rounding the backs of book cases prior to casing the book; "Marshall" confetti-making machine, in which the paper is automatically fed through a die plate; letter file creasing machine for punching and creasing letter files, loose leaf and index card folders; paging machine (treadle) with new and simplified locking device keeping figures in perfect alignment; index cutting machine (treadle) with knife working perpendicularly, no side travel, ensuring perfect cutting; slot cutting machine, treadle and power, single and multiple for cardboard box-making; loose leaf creasing machine for hand or power, very simple and most effective; calendar rimming machine, very simple, fixes rim and suspender in one operation; bevelling machine, hand lever and rotary, for giving perfect bevel on strawboard, cardboard, etc.; deckle edge machine, hand lever cutting deckle edge cards, tailors' bunch patterns, etc., also for cutting small work, or for stabbing pads with one or more holes, or very thick folded sections, stabbing through the fold; round cornering machine, hand lever, fitted with self-clamp, top and bottom knife, for the rounding of books, show cards, etc.

"Marshall" Thread Stitching, Looping and Stringing Machine.

Nickerson Brothers.

At Stand 36, Gallery, this old established and well known firm of tanners and leather manufacturers are exhibiting all classes of fancy and other leathers as used by the bookbinding trades, both for letterpress, account book and stationery work, such as moroccos, roans, skivers, basils, hides, etc. Although a good display is made at the Exhibition, the firm would welcome a visit to their warehouse at 99 and 101, Worship-street, E.C.2, where they carry possibly the most varied and largest stock of fancy leather in London. This old firm was established in Bermondsey, where their works are still situated, as far back as 1848, and their long experience is at the disposal of customers, many of whom have been on their order books for over half a century.

Capper Pass and Son, Ltd.

This old and well known firm of smelters and refiners of nonferrous metals and alloys are displaying all grades of their various standard printing metals, including founders' type metal, mono, stereo, lino, intertype, and typograph metals. Their founders' type metal No. 1025 is strongly recommended for use with the Lanston Mono display type casting machine, for 14-point and upwards. On account of the exceptionally fine type produced both in solidity and perfection of face, 36 point slugs cast with this metal are stated to be heavier than similar-sized founders' type. Their mono metals are made in three standard grades, Nos. 1016, 817 and 616, to meet varying requirements. For general jobbing work and runs up to 100,000, Pass No. 616 is recommended; over 100,000, Pass No. 817, a somewhat harder metal containing more tin is manufactured; and for very special work, Pass No. 1016 metal, containing still more tin, is recommended. Their stereo metals comprise mixtures suitable for all purposes, and different grades of lino, intertype, and typograph metals will also be included. Another interesting exhibit of this firm is "Chempur" tin, which they claim to be the purest tin in the world, containing as it does 99·9889 per cent. tin. Various other alloys of interest to the printing trade include soft lead and antimonial lead.

A. W. Penrose and Co., Ltd.

This well known supply house for photo-process requisites are making a large display at Stand No. 6, Row C, Main Hall, of their latest specialities, amongst which their line of photo-engravers' finishing machinery have a foremost place, and includes the "Empire" ball-bearing router, "Empire" beveller, new pedestal saw bench, "Bowler" squaring machine and guillotine. The latest model of the Empire etching machine is also a feature. Of special interest to lithographers is a new type of photo-litho camera, taking 32 in. by 22 in., mounted on an all-metal stand 20 ft. in length. In connection with this outfit is shown a set of "Repri" open type arc lamps, which are particularly suitable for colour work, the four lamps being in series, working through one resistance, they are very economical. A face up vacuum printing frame of large size; also a power-driven electrically-heated whirler of corresponding dimensions, and a lithographic graining machine are being exhibited. A drying cupboard, with fan and electric heater, will be found interesting, and there is a display of litho zinc plates and preparations for lithography—Litholene, Atzol, Chromosal, Prepasol, Erasol, etc. Both lithographers and engravers will be interested in the Pentangier films, together with cabinet and laying down machines. The Penrose hand offset proofing press, which has become so popular in its original small size, is shown in a larger form, taking plates 37 in. by 26 in. The Bassett registering device for colour work, which the firm are handling, is being demonstrated, and will undoubtedly be viewed with great interest by photo-engravers and printers.

Pictorial Machinery Ltd.

One of the most outstanding and attractive features of the Printing Exhibition is Stand No. 7, Row C., in the Main Hall, where Messrs. Pictorial Machinery Ltd., of London, are exhibiting many interesting appliances for both photo-engraving and photo-lithographic processes. The latest model of the step and-repeat machine is amongst the exhibits, and the stand is so arranged that the machine can be shown in operation. Demonstrations of this machine will be given during the whole course of the Exhibition, thus giving craftsmen an opportunity of fully investigating its advantages and possibilities. The "Printex" negative printer is also exhibited. By the use of this machine for direct printing on to a plate from a negative, guaranteed accuracy of one-thousandth of an inch is assured. To the lithographer who caters for duplicated work of a fairly large size, this instrument is of considerable interest and also worthy of investigation. The "Pictograph" cameras, one of which is on show, are well known for the superior workmanship embodied in their construction. The "Douthitt" Diaphragm Control is installed on the camera as above, and demonstrations are to be given of this well-known scientific instrument during the run of the Exhibition. We might mention that over 600 controls are installed in various concerns in America and on the Continent, and the use of this system in this country is constantly increasing. The "Lithotex" special all-metal printing-down frame is on view and all intending purchasers of such apparatus would do well to see this frame. Various process engraving appliances are exhibited, viz., "Pictograph" router, jig-saw, planing machine and circular saw. The "Pictograph" Collodion is another striking feature of the stand, and thus places before the trade a long-felt want. Expert demonstrators are in attendance during the whole course of the Exhibition and their advice and assistance is at the service of the trade generally.

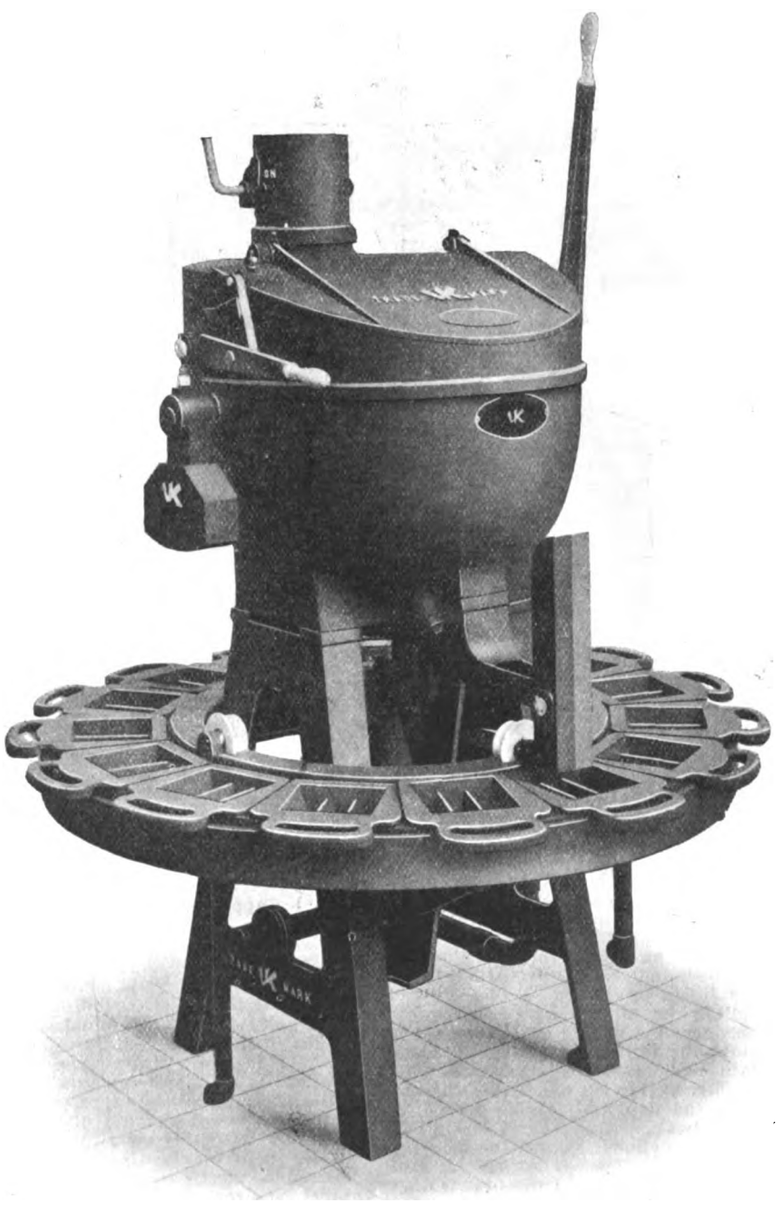
John Shaw and Sons.

This Honley firm of ruling machinery makers show a number of important models. Prominent is a "Super-Imperial" disk ruling machine, for feint lining and striking four colours on both sides of sheets at one operation, for ruling sheets up to 39 in. wide, with ruling cylinders 43½ in. circumference. There are long ruling cloths on this machine, 12 ft. 4 in. long, instead of fixed cylinder cloths. The advantage of these cloths is that they do not get wet, and when striking the disks strike on different parts of the cloths. The "Bailey" rotary perforator attachment and the Shaw patent sheet cutter is attached to this machine. Thus ruling, perforating and slitting can be done at one operation. Also added to the machine are a patent pile suction feeder which will feed any kind of paper from manifold to thin cardboard, and the Shaw patent pile layboy, which will hold from 20 to 25 reams of paper. Another notable model is a quadruple striker pen ruling machine, for ruling and striking four distinct patterns at one operation, with the "Bailey" patent rotary

Digitized by Google

perforator attached. Thus ruling and perforating can be done at one operation. A feature of this machine consists in new design pen beam standards and fittings, which are extra firm and rigid and very easily adjustable to any height or angle. Latest style layboy with both back and side joggers ensures the sheets being knocked up perfectly true and accurate. Of interest also is a "New Imperial" rotary perforating machine, for straight-through perforating and striking, for perforating sheets up to 36 in. wide. This machine will do slot perforating, fine perforating, scoring, creasing, bending and slitting. Moreover there is to be seen a "New Imperial" rotary glueing and gumming machine, for whole surface work and strip gumming. A feature of this machine is the large brass cylinders; the top cylinder is 28 in. wide and the bottom cylinder 30 in. wide. All these machines can be seen actually running and in operation, and can be tested by interested buyers.

Smyth-Horne, Ltd.



Messrs. Smyth-Horne, Ltd., are exhibiting at their Stands, Nos. 2A and 11, Row C, in the Gilbey Hall at the Agricultural Hall, a number of their advanced labour-saving machines, all of which can be seen in operation during the show. Here is to be noted the Smyth new No. 10 book sewer, which is the latest sewer placed on the market by the Smyth Manufacturing Co., and is designed to sew the general run of publishers' and letterpress books. Its chief asset is being able to run as fast as the girl can feed, *i.e.*, 75 per minute, and it runs practically noiselessly. Quite a number of novel features are embodied in this machine. Other machines that should be seen are the Smyth Improved No. 3 book sewer, and Nos. 4 and 8 sewers, besides the Smyth sheet gluer and pasting machine, incorporated in which is the wonderful porcelain glue roll, which is ground smooth and is found to be the best even substance for distributing the liquid, such as glue or paste and is practically everlasting. The Brackett double-headed stripping and binding machine with 9 in. siding up attachment has embodied in it several new and novel features. The wonderful Seybold 44 in. strip and label cutting machine is shown for the first time; it has a precision device, which advances the back gauge to every cut for label cutting. The Seybold new three-knife book, magazine and pamphlet trimming machine has a big range, not only in the size of books that can pass through it, but also in the type of books, and the new knife motions cause wonderful smoothness in operation. The G. R. S. Rapid 42 jobbing folding machine, making one, two, three, or four folds, can have a parallel attachment attached to either the third or the fourth fold, and can be fed as fast as the girl can feed the machine, viz., 3,000 or more sheets per hour. Inspection should be made of the G. R. S. new automatic continuous press feeder, which has met with such success on the American market during the last two years, the leading printers having already installed a number of them. There are several running in this country very successfully. The Lindbladh Duplex L. pen ruling machine, with a G. R. S. continuous feeder attached is a new and very novel ruling machine, which should prove a very attractive exhibit to all those interested in the trade. The Smyth space band cleaning machine is a new machine, just recently placed on the market by the Smyth Manufacturing Co. It is very attractive in the way it cleans the space bands and has a big speed. There are already many in operation. The Christensen wire stitcher feeder shown is the original wire stitching feeding machine, as made by the Christensen Wire Stitcher Co. The machine on show is equipped with six feeding stations and runs just as fast as the girl can feed it.

Stonhill and Gillis.

In addition to the weekly publications of this firm—the *British and Colonial Printer and Stationer* and the *World's Paper Trade Review*—there are being exhibited at Stands 51 and 52 in the Gallery, a wide selection of technical books dealing with the allied industries. On the printing side there are such useful works as "Printing: Its History and Progress," "Bookbinding and the Care of Books," "Inks," "Music Engraving and Printing" and "Engraving." Papermaking and its subsidiary trades will be represented by H. A. Maddox's volume on "Paper"; F. Heckford's valuable little monograph, "An Elementary Introduction to Papermaking," "A Dictionary of Paper Terms," and Strachan's work on "Waste Paper Recovery." There will also, of course, be specimens of the special issues of the *British and Colonial Printer and Stationer*, dealing with bookbinding, lithography and export trade. The Exhibition number should arrest the attention of visitors for its special features and information concerning the outstanding exhibits at the Royal Agricultural Hall.

Victory-Kidder Printing Machine Co., Ltd.

This firm will be glad to welcome visitors to their stand, No. 11, Row B, Gilbey Hall, where many interesting machines will be installed under power, some of which we briefly describe. The Kidder Self-Feed Bed and Platen Press, feeding from the reel, prints from type or flat stereos, in one or two colours, accurately to register, the product being delivered either cut to size or in roll form. Many additional mechanisms may be added to the machine and for certain classes of work it is unequalled. The two-colour roll product press is of the vertical type and is designed to print to register in one or two colours at will.

Metal Melting Furnace: Victory-Kidder.

It is particularly accessible for make-ready purposes, and the ink distribution is capable of inking the heaviest of solids at a high speed. The "U" Type slitting and re-reeling machine is the outcome of the manufacturers' desire to build a British slitter capable of giving first-class slitting and re-winding on all qualities of paper at high speed, a most important feature being the facility for using either shear or pressure cutters. The "Victory" self-clamp guillotine is essentially a compact, efficient and simple machine, all complicated mechanisms having been purposely avoided. It is adapted for the heaviest and hardest cutting, is exceedingly durable, and it is practically impossible for it to get out of order. The VK patent oscillating metal melting furnace, by reason of its excellent qualities, is becoming so well known that all who are contemplating additions to their foundry have doubtless investigated the principles adopted in its design. Briefly, the furnace allows for pouring without valves and the metal obtained is perfectly clean, because it flows from the bottom of the pot. The methods used to prevent radiation or undue oxidisation are unique. It is supplied with capacities of 150 lbs. and 600 lbs. For visitors interested in numbering machines, there will be a complete range, including special rotary machines manufactured at the firm's well-equipped works at Birkenhead.

B. Winstone and Sons, Ltd.

The stall of this well-known firm of printing ink manufacturers will be found in the Entrance Hall. They are displaying an extensive range of specimens of the various printing inks manufactured at their two model factories. These specimens embrace every known process of printing—offset, trichromatic, letterpress, litho, photo-litho, rotogravure, copperplate, security, etc. Samples of the varnish for which the firm has an excellent reputation are also shown in an attractive way. Other exhibits are dry colours, composition rollers, lithographic rollers, printers' blankets felts, etc., furniture, brass rule and transfer paper. Following their usual policy the company are ready to furnish useful information on all matters of interest to printers, and Winstones hope visitors will regard their stall as a centre of service and help.

Four Years' Progress in the Graphic Arts.

What has been Accomplished since the Last Printing Exhibition.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

It is useful to look back over the four years that have passed since the last Exhibition of the Printing and Allied Trades to see how far the trade has progressed in the adoption of new ideas and new methods. It is, perhaps, difficult to single out some notable and really outstanding achievement in that period, marking the beginning of a new era of progress—possibly because the space of time is too short to bring about any radical change. A great invention may be the conception of a moment, but a decade or more may be required for its development and application. However clever and obviously useful an invention may appear at first sight, time is required to reveal its weaknesses, to overcome its objections by improvements, and finally to persuade the trade of its practicability. Thus four years is no sort of period in which to show any remarkable progress. It is more like the period of growth from childhood into vigorous youth than that from youth into strong manhood. We must not, therefore, expect that the coming Exhibition will reveal any very striking changes in the equipment and methods of the businesses included in the circle of the graphic arts; rather it may be expected to show steady improvement on well-tried lines, with perhaps a few exceptions.

Speeding-up Letterpress Printing.

The tendency in typographic work seems to be to cling to the flat-bed principle in the machines, no doubt because of its adaptability to moveable type and blocks, which still hold the field for the great bulk of printing to-day. This being so, the efforts of printing engineers have been directed to the speeding-up of almost all flat-bed styles of machines, whether platen or cylinder. The old Wharfedale stop-cylinder machines, though still doing good service in many an old-fashioned printing office, have passed into the limbo of obsolescence in houses with pretensions to the most modern equipment. The whole present trend is towards two revolution or continuous revolution machines running at the highest possible speeds with automatic feeders. Even the platen machines have had to yield to the pressing demands of modern speed conditions, and no doubt we shall see at the Exhibition new models fitted with automatic feed and delivery. Such devices still do not appear to satisfy the increasing requirements of high production, for the vertical Miehle, the Kelly, and similar machines, each proceeding on different lines, are brought out to supply the need for fast running, almost automatic machines for moderate size sheets.

Large Machines Being Superseded.

The extent to which such small fast-running machines are displacing big sheet machines is perhaps not generally realised, and it shows that the idea of the latter being more economical is being contradicted by practical experience. A fleet of little machines can get away with the work and perhaps finish the job, before the make-ready on the big machines is accomplished in the case of difficult half-tone and colour formes. The advantage claimed for the big machines is in handling large impositions of book work, but it would seem to be more practical to have smaller impositions, easier in every way to make up and to make ready, whilst being capable of being run off more quickly. Of course, such conditions as folding, collating, stitching and cutting have to be taken into consideration, but machine firms will soon make the auxiliary machines conform to modern requirements.

Tendency to Rotary Printing Methods.

Whilst I can admire the mechanical ingenuity displayed in the construction of the small fast-running machines, they seem to me to represent the last kick of typographic printing. If type setting and block making are going to be superseded by photo-plate-making and rotary printing, as seems likely, these high-speed machines will be but a passing phase in the printing industry. Rotary printing is the natural thing for high speed, but with type and blocks it is impossible, and even with the aid of stereos and electros it is at best clumsy and expensive. It cannot survive against rotary offset and rotary photogravure when these processes become perfected to the same degree as the typographic printing of to-day—I mean perfected in the sense of being handled with the same ease, speed and certainty, brought about by long experience and practice. One has to admit that there are difficulties about these new processes, and that skilled men who can turn out uniformly good work are scarce; but, given time, these drawbacks will disappear.

Co-ordination of Process and Printing.

Just as in the early days of process block making it was difficult to get printers to understand the treatment required for the blocks, so to-day offset printers do not always do justice to the photo-litho plates handed to them, and the one is inclined to blame the other for poor results. It may be that the photo-litho plate is not all that it should be from the lithographer's point of view, but the process man has his difficulties in working in a new way with a new medium. The offset man demands a coarsely grained plate, and an image that will withstand any amount of doctoring and washing out. This necessitates the process man's using a sensitising method which does not yield such beautifully smooth and delicate tones as the fish glue enamel employed in the etching process, and he has no means to doing anything equivalent to the "fine etching" resorted to in half-tone block making. Any re-touching on half-tone negatives usually shows up badly, and it is not easy to make any correction on the zinc. When the plate is put on the offset press a further series of difficulties occur. Inks which may have suited well enough for commercial offset often do not give the strength required for half-tone pictures; and though it is one of the special claims made for offset printing that any paper can be printed on it, nevertheless the fact remains that very few papers are really well suited for offset printing from half-tones. There is no possibility of overlaying as in block printing—at least I do not know of anyone who has tried to apply overlays in litho work. Add to these points the unexpected difficulties which often occur in offset printing, even in the hands of the most skilful and experienced men, and we need not wonder that some firms who have taken up photo-offset begin to despair of making it a really commercial proposition.

How Photo-Offset May be Improved.

All these difficulties are beside the mark if the principle of offset printing is a right one—and who would dare to say in these days that it is not?—for the means must be found to bring it to ultimate perfection, yielding results which will be as acceptable as the best typographic work of to-day. This will be accomplished by new inventions, and by the painstaking efforts of workers in overcoming difficulties as they arise. The direction of improvement will be in finding out how to use a smoother printing plate, how to improve the photo image on the plate, how to print dry, or with a minimum of moisture, and how to make inks which will offset with the full body of colour. There are some processes which have been developed since the last Exhibition tending to these ends. High-light methods, such as the Bassani process, the use of retouched continuous-tone positives from which to make the half tone negatives, improved methods of sensitising the plate—as the Aquatone or the "Cold Enamel," retouching on the plate by chemical means, the "dry litho" process of printing, and improved inks. Some firms on the Continent are making their plates by first etching them on copper, fine-etching them with as much care as for half-tone blocks, and finally pulling transfers from them, believing that though this may seem the longest way round it is the shortest way out of their difficulties.

Increased Speed in Offset Printing.

In the matter of speed in offset printing, a great deal has been accomplished since the last Exhibition. It will be remembered that though a reel-fed offset machine was shown at the pre-war Exhibition, nothing of this kind was shown at the last one. Evidently the method had not been sufficiently perfected, but now such machines are finding an every-day application for long runs of periodical work. These machines have proved capable of yielding a regular product of 8,000 to 10,000 perfected and folded sheets per hour; and experimentally much higher speeds have been obtained. Newspaper men are carefully watching the progress of such machines, but are not yet convinced of their adaptability to big editions.

Two-Colour Offset Machines.

Great improvements have been made in the two-colour or perfecting rotary offset machines in the last four years, and the gain over the old-fashioned flat-bed machines printing from stone and running at an average speed of about 500 per hour, printing one colour at a time, is enormous, whilst the advantage over the single-colour rotary offset machine is very considerable. No wonder that the old flat-bed machines are everywhere being scrapped. The flat-bed offset, often converted from an old direct litho machine, has not on the whole proved a success. It is found that the rotary machine is in every way more serviceable, occupies less space, takes less power, and runs faster, therefore more economically. On small rotary offset machines, with automatic feeders, speeds up to 4,000 impressions per hour have been attained in commercial work, whilst 2,500 is readily attained on the larger machines.

"Wet Colour" Proofing and Printing.

In America a good deal of progress has been made in proofing and printing colour blocks without the necessity of waiting for the colours to dry. In some degree this success is due to the special character of the inks, but new presses have been the chief means in obtaining the excellent results that have been shown. The Claybourne and the Hacker presses are typical, in that both have the same end in view. The idea is to enable the blockmaker and the printer to determine quickly whether the colour results are correct. The Claybourne people have proceeded on the lines of making a press with four beds and four inking units, but with only one impression cylinder, which travels successively over the plates. The Hacker system requires four presses all synchronised in respect to their registering, inking and impression arrangements. The results obtained in both systems are very good. We may not see these pressed at the Exhibition, but probably the results may be shown. The presses are, of course, designed to supplement the large rotary colour presses which are being used for the printing of big editions.

Rotary Photogravure.

I hardly think we shall see anything notable in connection with this process at this year's Exhibition, except the specimens of work. British machine makers have not shown much enterprise in this process, and the countries which are making the most progress are either excluded by the "enemy" clause in the rules of the Exhibition, or, like America, have enough to do in supplying home needs without thinking about seeking a market here. Penrose's have successfully demonstrated the possibility of printing from thin sheets of copper, instead of heavy continuous copper cylinders, and have also shown the improvement that can be made in printing by combining the offset principle with gravure, but, not being ready to market the machines, have no object in showing them at present. Their method may make the rotary photogravure process a practical proposition for the printer who does not wish to instal an engraving plant and would prefer to get the plates made outside. As at present worked rotary photogravure is successful only on a large scale, as worked by houses doing a good deal of periodical work, or in the hands of trade firms which can command a continuous supply of large orders.

Digitized by Google

Colour Photogravure.

Very great progress has been made in the last four years in the commercial application of photogravure to colour printing, and large quantities of excellent work are being turned out; but, so far, it is a process only adaptable for sheet-feed machines running with automatic feeders at 2,000 to 2,500 per hour. Several Continental and American firms are endeavouring to perfect multi-colour rotary machines which will print the colours simultaneously, or, rather, in quick succession, either from reel or sheet, but so far these efforts have not met with any real success on account of the difficulty of getting good register and securing uniform colour rendering. The process of making the cylinders is all right, and has been quite standardised, but the mechanical problem of printing them has not yet been solved.

Composing without Typesetting.

Naturally great expectations are being raised as to what will be seen at the Exhibition to demonstrate the possibility of fulfilment of the dream of many inventors to compose without typesetting, by photographic or other means. Various inventors have been at work on this idea, and three or four have reached the stage of producing working models. Only one invention can be said to have reached the practical stage of being ready for immediate application. This is the "Typary" machine, which I fully described in the *British and Colonial Printer and Stationer* for April 9th. The machine will be shown working at the Exhibition, and will undoubtedly be viewed with great interest. Although it does not photographically reproduce the typing as it operates, it types at a high speed clearly-printed copy, which by an auxiliary process of the same inventors, called "Typon," can be quickly converted into a film negative for laying down on zinc for offset printing without the use of a camera. Thus every requirement is fulfilled, and if, by eliminating the photo operations from the machine, a high rate of speed, equivalent to the Linotype or Monotype, can be attained, with all provision for justification, correction, change of type faces, etc., as is claimed, it is difficult to see that anything better can be desired. The user of existing mechanical composing machines may be hard to persuade of the advantages of the machine over existing methods, and the printer with many tons of type in his plant will be equally reluctant to adopt a machine that will render the metal obsolete, but the lithographer who wants a means of producing text matter without setting up type and pulling transfers will hail such a machine as a boon. The "Typary" machine, if it comes into extensive use, will strengthen the position of offset printing, and make it a still more formidable competitor than now of letterpress printing.

Blockmaking of To-day.

Though it is unlikely that the photo-engravers will show any new processes at the Exhibition, I doubt not that they will make a fine display of the work they are doing. Blocks were never better produced than now, and colour work has reached the zenith of perfection. It is only by maintaining this high standard of quality that the photo-engravers can hope to hold their position against the inroads of offset and photogravure. The advances of these processes are causing some serious misgivings in the minds of the more thoughtful members of the trade.

MESSRS. HEEREY AND CO. have removed to St. Andrew's House, 32-4, Holborn viaduct, London, E.C.1.

JOHN DICKINSON AND CO., LTD.—Referring briefly to the state of the paper trade at the recent annual meeting of the shareholders of Messrs. John Dickinson and Co., Ltd., Mr. R. H. Ling (the chairman) said the general conditions of the industry during the year under review were far from satisfactory. Although a slight improvement in demand was experienced, it was of a somewhat fitful character, and keen competition prevailed. It is, therefore, a source of great satisfaction to be able to report that the company's business showed considerable expansion during the period. The various mills were kept running at full time; a large number of new machines were installed, which resulted in an increased output. The progress made in overseas branches was not so pronounced as in the home market; the export trade continued to be restricted by adverse conditions of exchange and other causes.

THE TRIUMPH OF Modern Offset Lithography.

By JOSEPH GOODMAN, F.R.P.S.

As mentioned in the concluding paragraph of our last article, lithographers who contemplate installing photo process methods into their works for offset printing will be well advised to commence with the easiest and simplest phases of it, in order to save time, money and materials. They will therefore begin with

Photo-Litho "Line" Work.

The procedure will be to take a sheet of clean, fine-grain zinc, of a size suitable to the work in hand, and rinse under the tap; it is then sensitised by the use of the following solution:—

Albumen (white of two eggs)	...	2 ozs.
Ammonia bichromate	...	40 grains
Water	...	8 ozs.
Ammonia (·880)	...	12 drops,

which, after being filtered through clean cotton wool, is ready for use.

After the first coating has been put on, and the excess drained off at the extreme corner, the plate is, if small, whirled on a hand whirler; for larger plates, a fixed whirler is used for the coating operation. A second coating is then applied at the opposite end of the plate, so that the sensitive film maintains a uniform thickness, this second coating being whirled to dryness over a copperplate or electric heater, which should be located in a convenient corner and in a subdued light, as the plate when dry is sensitive to light, and must be protected from the direct rays of strong light.

Applying the Negative.

The negative, which may be either a wet collodion or a dry plate—or for many purposes a paper negative may be utilised—is now taken and carefully dusted on both sides and afterwards passed over the plate heater for a second or two in order to remove any dampness that may have settled upon it, and to take off the chill. It is next laid film side up in the process printing frame—pneumatic or otherwise—and the sensitive film of the zinc plate placed face downwards upon it; a piece of saddler's felting is inserted and the backing board placed in position. Pressure is now applied by the screws in order to ensure perfect contact, so that the light may be prevented from creeping underneath the lines of the negative. One can easily ascertain when this complete contact is attained by tilting the frame to an oblique angle, when prismatic rays will be observed over the area where the glasses of frame and negative come in contact. Should these prismatic rays not be present, it may be inferred that more pressure is needed. As the pressure is exceedingly great, care must be taken that no particles of grit or sand are enclosed between the glasses or rabbet edge of the frame, or breakage will probably occur. (Pneumatic process printing frames may be purchased later.)

The Printing-Down Process.

The frame and plate are now exposed to light to effect the copying. If a good arc lamp is used, affording a fairly constant source of light, the exposure may be timed with great accuracy after the first trial exposure, providing that the printing frame is always situated at an equal distance from the source of light (a distance of one foot usually suffices). If, however, daylight should be used for the copying, it will be necessary to have recourse to an actinometer. The acting principle of the instrument is the registering of the actinic (chemical) intensity of the light, by means of a strip of silver paper (P.O.P.) through the varying densities of gradated and numbered strips of interposed thin paper. Once the correct exposure has been ascertained by this means, any number of repetitions may be produced with tolerable accuracy, by utilising this correct exposure record for future guidance.

Rolling-up.

As soon as the copying by light has been accomplished, the printing frame with the zinc plate still enclosed, is taken to the rolling-up bench, which should be situated in a subdued light. The plate is here removed, and the exposed coated surface rolled up with a thin film of litho re-transfer ink (which has been previously thinned down with turpentine), applied by means of a hand roller covered with letterpress roller composition. It must here be pointed out that it is not necessary to lay on a thick coating of this ink: in fact, a thin grey coating will give the best results, both for the development process and the definition and clearness of the image.

Developing.

When the inking-in has been performed, about three minutes are allowed for the turpentine to evaporate from the ink; the plate is then developed. This is done by immersing it in a dish of clean water, and allowing it to soak for a couple of minutes, then by means of a wet swab of cotton wool, developing the image completely by lightly rubbing the surface of the plate in a circular manner, until all the superfluous ink is removed and the work stands out sharp. A final rinse under the tap completes the operation, and the plate is next dried rapidly by means of the heater or whirler. It is now resined, French chalked (talced), cleaned up and then etched for four minutes with the non-corrosive etching solution as described in preceding chapters, and is ready for printing from.

Over or Under-Exposure.

Should the plate by any miscalculation be over-exposed difficulty will be experienced in getting the image to develop clearly; this may be corrected) if the amount of over exposure has not been too great, by adding a few drops of liquor ammonia to the developing water. The operator must, however, avoid adding an excess; otherwise the nature of the greasy ink will have become destroyed. Should it be found that the plate is very much over-exposed, it is far better and quicker to make another exposure, as a tinkered or faked plate can never produce results equal to a correctly exposed one. If, on the other hand, the plate has been under exposed, the image will dissolve gradually until it disappears, leaving no alternative but exposure of another plate. Should the sensitising formula, number of coatings applied, duration of exposure, extent of light action, etc., be the same as originally used, it will be found that there is no cause or possibility of error in the copying or developing operations, both of which can be comfortably performed in a properly organised department within the half-hour. This is of great importance where urgency is a dominating factor.

The finished plate may then be printed from direct, or utilised as an original for re-transfers

Lithographic Trades Review.

NOTES AND NEWS.

REPORTS that reach us indicate that business generally in the lithographic section of the industry is in a moderately good condition, the volume of work in hand at the present time being described as quite satisfactory. As far as unemployment is concerned the number of men signing the out-of-work books this week is about the same as a month ago, although there is a marked improvement when the figures are compared with twelve months ago.

ON the technical side of the lithographic industry the dominant subject of thought at the moment is, of course, the Printing Exhibition and the revelations that will be made there of the progress of lithography. There is no doubt whatever that many indications of progress will be noticeable, both in the beautiful lithographic printing that will be exhibited and in the machinery, apparatus and supplies provided for the lithographers' use.

IT is certain that great interest will centre around the Typary text-typing machine, which promises somewhat revolutionary facilities for the lithographic production of typographic matter. Actual photo-typesetting will not, we understand, be shown at the Exhibition. The Hunter-August machine is, after all, not to be shown, though it is now in an advanced stage of development, and is being demonstrated in London.

A BIG attraction will be the remarkable "Printex" negative printer, which has been perfected just in time to make its debût at the Exhibition. In this machine no effort has been spared to attain the utmost accuracy, and the claim is made that precision to within a thousandth of an inch is achieved in the printing down of a negative—singly or in multiple form—upon the photo-litho plate.

THOUGH the English representatives of the Ogden multiple duplicating machine will have a stand at the Exhibition, they will not be showing the machine there. The machine has entered the English market, however, and is being demonstrated in London.

A JOINT meeting of the executives of the Amalgamated Society of Lithographic Artists and the Amalgamated Society of Lithographic Printers (London branch) was held on Thursday of last week, when important questions affecting the respective interests of these two organisations were under discussion.

THE triennial meeting of the general council of the Amalgamated Society of Lithographic Printers will be held at Birmingham next month. There has been arranged a long agenda, which includes an item dealing with the revision of rules. Other matters of importance to the industry are also down for discussion.

AT a concert held at the Shoreditch Town Hall on Tuesday Mr. E. Clunes, father of the federated chapel of Messrs. Waterlow, Finsbury, was made the recipient of a present from the chapel. Mr. Woodgate Stevens, London branch secretary of the Amalgamated Society of Lithographers, made the presentation on behalf of the donors.

MR. DOWDEN, assistant to Mr. Woodgate Stevens, has made excellent progress from his recent operation, and hopes now to resume his duties in a short while.

FILM poster advertisements are to be censored in the Irish Free State.

THE Florence International Book Fair was inaugurated in the presence of the King of Italy, representatives of Parliament and foreign delegations, in the Palazzo Vecchio, where Sir Rennell Rodd spoke as the chief British delegate. The King visited the exhibitions building, where 30 nations are represented, England with 77, France with 115, and Germany with 102 publishers. Poland, Rumania, Switzerland, Yugo-Slavia are splendidly represented, but Russia, despite a promise is not.

Trade Developments.

IT is always of great interest to note efforts being made to cheapen supplies for the printing and allied trades, and it is good to learn that a move has been made towards the reduction in the cost of plant for the electrotyper, stereotyper and photo-engraver, by the well-known firm of H. Williams and Co. of Red Lion Works, Warner-street, E.C., the manufacturers of the famous "Lion" machinery. We understand they are not exhibiting this year, but anyone interested will be welcomed at their works. This firm, established in 1870, has specialised in the production of this particular class of work, and should not be overlooked by anyone interested in supplies of this character.

MR. A. EDLER, of 78, Southwark-street, S.E.1, calls attention to a new index-cutting machine which is made in his factory in Bermondsey, and which, he claims, is simplicity itself, and is sold at a very low price. The index is produced in quite a novel and ingenious way for which a patent is being applied for. A chart is supplied with the machine, which shows even an unskilled operator at a glance how to adjust the machine to any size index that is to be cut, and the machine is so simple in working that even an inexperienced girl can operate it. Another new machine which he will shortly have on view is a new ruling, perforating and creasing machine for loose leaf ledgers, etc. The chief feature of this machine is simplicity, which makes it possible to sell it at a very low price in spite of the high speed which can be attained, which is said to be equal to any of the most expensive machines on the market.

SUBLETHA.—For some years now many of our prominent firms of bookbinders, cardboard box makers and others have been using a very fine and durable material which passes under the name of Subletha, and claims to give all the benefits of cloth and some of the benefits of leather with less than fifty per cent. of the cost of cloth. Subletha, Ltd., of 53, Lord-street, Liverpool, specialise in the production of Subletha and nothing else. Their production is known to bookbinders and others all over the country as an ideal material for the binding of books or the covering of boxes in which it is not desired to go to the expense of leather or cloth, but which must have both durability and appearance. The material is very pliable and easy to use, and has the special advantage that it handles like leather. It has been placed on the market only after the most prolonged study and experiment on the part of the inventor, T. Ingham, chemist and managing director of Subletha, Ltd.

A SUPPLEMENTARY EXHIBITION.—An exhibition outside the Printing Exhibition is that which Messrs. R. Hurner, Ltd., have arranged at their showrooms, 121-3, Rosebery-avenue, E.C.1. Messrs. Hurner, who are agents for the original Brehmer machinery for the printing and allied trades, are making a special display for the benefit of visitors to the Exhibition, and will be pleased to give demonstrations to interested visitors who care to call at their premises, which are easily accessible from the Agricultural Hall. Amongst the many different classes of machinery provided are wire and thread book-sewing machines, wire and thread stitching machines, book and newspaper folding machines, cardboard and wood box-making machines, glueing and gumming machines, leather paring machines, round corner cutting machines, and so on. A large stock of original Brehmer spare parts, also wire, thread, staples, cloth, and tape are always at hand.

A NEW MACHINE.—The "Rulex Tandem" combined ruling and printing machine represents an advance in modern machinery which is bound to have an important effect on the production of ruled and printed work such as analysis books, Government forms, factory forms, shipping lists and manifests, account books, etc, which are required in large quantities. This machine will be demonmonstrated for the first time in this country at the show-rooms of Messrs. Soldans, Ltd., from May 16th onwards, and will undoubtedly create great interest. As opposed to the "Rulex Tandem," which prints in headings and footnotes from ordinary type matter, and prints marginal columns of figures, etc., from stereo plates, the "Rulex Rotary" is an entirely automatic machine which prints from stereo plates only. The latest disk ruling machinery, both single and double-sided, as well as the special "Baby" jobbing bench model can also be obtained from Messrs. Soldans, Ltd. Other noteworthy machinery in operation at their address will include the high-grade "Record" fast-running cylinder machine, the famous "Lightning" proof press, new lines for photo-litho, etc., and a visit to 44-46, Eagle-street, Holborn, W.C.1, will well repay itself.

INK SPECIMEN BOOK.—The calls for Messrs. Slater and Palmer's last specimen book of letterpress and lithographic inks has so quickly exhausted the issue that a new one has been prepared which illustrates the progressive character of this firm in showing an increased number of most useful inks at very moderate prices and the actual specimens exhibit a distinct advance on the last issue, while a considerable number of the prices are substantially reduced. This book should be in the hands of all leading British and Colonial printers. The trend of the times, however, appears to be the insistent development of the offset process, and recognising this growing branch of the printing industry, Messrs. Slater and Palmer have been giving special attention to the making of highly concentrated colours necessary for the best results at offset. As so much of this work is commercial and general advertising, it has been S. and P.'s object to produce these inks at a moderate price and thus assist printers in keeping their estimates down to a figure that will "get the business." A greatly increased trade in this department is fair evidence that the quality and value meet the trade requirements. The S. and P. service aids to printers include their super-solid solvent, palmink, wash-up preventative, radiexe driers, Hercules roller composition and "Speedier" printing preparations.

Printing and Paper Workers' Home.

Opened at Filey.

The new convalescent home of the National Union of Printing, Bookbinding and Machine Rulers and Paper Workers, which is the outcome of the success of the existing home at Carshalton, Surrey, was opened at Filey on Tuesday.

It consists of a fine mansion, with cliff gardens extending to the foreshore, looking out on the tremendous sweep of Filey Bay. The home was purchased for £8,000, considerably below its original cost, and has accommodation for 45 patients, who have everything free, including travelling expenses.

The opening ceremony, by Lord Riddell, was attended by about a hundred, including Messrs. G. Harraway, general president; T. G. Newland, general secretary; W. H. Dyer, organising secretary; E. W. Spackman, printing section secretary; J. Kelly, secretary, Bookbinders' Section; W. Ross, secretary of the Papermakers' Section; H. Skinner, general Typographical Association; J. French, general president of the Typographical Association; A. E. Holmes, secretary, Printing Trades Federation, and Mrs. Holmes; Messrs. McAra, secretary, Newspaper Proprietors' Federation; W. Dyson, Papermakers' Association; Harry Chalk, chairman, Convalescent Home Committee; the Rt. Hon. C. W. Bowerman, M.P., president of the Printing Trades Federation; Messrs. T. E. Naylor, M.P., secretary of the London Society of Compositors; H. F. Parker, secretary of the Lloyd Memorial Homes, Deal; A. O'Connor, secretary of the Printers' Medical Aid Association; and many other representatives of the Union and kindred trades; Mrs. Evans, widow of the late secretary of the paper workers, founder of the Carshalton Home.

Trade Notes.

DE LA RUE AND CO. — In the Chancery Division, on Tuesday, Mr. Justice Eve confirmed the reduction of capital of Thomas de la Rue and Co. from £2,000,000 to £1,376,000 by writing off capital lost or unrepresented by available assets.

STRAKERS' CENTENARY. — An attractive brochure has been issued by Messrs. Straker Bros., Ltd., in connection with the celebration of this well-known firm's establishment 125 years ago, and also of its removal to the metropolis, which goes back to 100 years. The many half-tone blocks and letterpress are excellently printed, and give a clear indication of the ability of the firm to execute a comprehensive range of work. In addition to these features there is a brief history of the business, which is related in an interesting manner.

THE PRESS ASSOCIATION.—The 57th annual meeting of the members of the Press Association, Ltd., was held on Tuesday afternoon at the chief offices, Byron House, Fleet-street, London, E.C., Mr. Arthur Pickering (*North-Eastern Daily Gazette*, Middlesbrough), chairman of the Association, presiding over a large attendance. In moving the adoption of the report and accounts, the chairman referred to the continued progress of the Association, and said that from the standpoint of news, both home and foreign, 1924 had been a year of great pressure and activity. Afterwards the committee of management met and re-elected Mr. Pickering chairman and Sir Charles Hyde deputy-chairman for the ensuing year.

POST CARD SIZES.—Signed by F. H. Nichols, for the secretary, the following letter has been received by the Federation of Master Printers from the General Post Office:—April 15th, 1925. SIR,—I am directed by the Postmaster-General to refer to your letters of the 4th and 12th ultimo and to say that as from the 1st of October next the maximum dimensions of post cards will be increased, in both the inland and international service, from 14 centimetres by 9 centimetres to 15 centimetres by 10·5 centrimetres (approximately 5⅞ in. by 4⅛ in.). The minimum dimensions will remain unaltered; and a card of any size between the minimum and maximum will be accepted for transmission.

PENNY POST.—Speaking at Bradford on Friday night, the Postmaster-General, Sir William Mitchell-Thomson, referred to the penny post. He held the view, he said, that increased cost of postage was a burden on communications which was none the less onerous if concealed. Lightening that burden had been impossible in the present Budget, consistent with giving much-needed relief to the taxpayer. "But the restoration of the penny post," he proceeded, "remains one of the objectives of our future policy, and if reductions in public expenditure accrue, which I can assure you the Chancellor is resolutely determined to effect, it is his desire, and certainly mine, that within the lifetime of this Parliament you shall again have the penny post."

AT the invitation of Messrs. Spicers, Ltd. the Association of Master Printers of South-East London proposes to visit the hand-made paper mills at Eynsford (Kent) on Tuesday, May 19th. The charabanc drive through the fruit orchards should prove a very pleasant feature of the event.

THE London members of the three newspaper organisations, the Institute of Journalists, the National Union of Journalists, and the Newspaper Press Fund, are joining in the arrangements for a matinée which is to be held in the Lyceum Theatre on Wednesday, May 13th, to increase the funds of the three associations on behalf of the widows and orphans of journalists.

BIRMINGHAM JOURNALISTS.—The annual meeting of the Institute of Journalists (Birmingham and Midland Branch) was held on Saturday. Mr. H. J. Whittick (editor of the *Express and Star*, Wolverhampton) is succeeded in the chairmanship by Mr. J. Trevor Jones, of the staff of the *Birmingham Mail*; he has been hon. secretary of the district branch for some years. Mr. W. H. Garbutt was appointed hon. secretary and treasurer; and the committee and other offices were filled. It was stated that the membership and finances of the branch were in a satisfactory condition and that during the past seven years, by means of concerts, over £1,000 had been raised by the district for the widows and orphan fund of the Institute of Journalists.

THE appeal brought before a King's Bench Divisional Court on Friday by the *Westminster Gazette* against a conviction made on the ground that the flying of a flag over their premises came within the legal definition of a "sky sign" was dismissed.

MR. HARRY MORTIMER, of Shibden, Halifax, a local master printer and publisher, has died at the age of 51. He succeeded to the business on the death of his father, Mr. Edward Mortimer, and had largely developed the scope of the firm. He was a prominent member of the Halifax Master Printers' Association, and had held the office of president.

WHILE the toast of his health was being proposed at the dinner and reunion of the Rationalist Press Association on Monday night Mr. George Whale, chairman, fell back in his chair in a fainting fit. Four doctors gave him attention, but it was later learned that he had died, and the reunion was abandoned.

MR. JAMES H. GOLDSMITH, formerly general manager and editor-in-chief of the *Hampshire Advertiser*, the *Southern Echo*, and associated journals, died at Southampton on Friday at the age of 68. He retired from journalism a year ago on account of ill-health.

MR. THOMAS WADDINGTON, a stationer, of Kettering, was searching the railway embankment for rare specimens of snails last week, when he was knocked down by a London express on the L.M.S. Railway, and killed.

THE late Mr. Joseph John Riley, J.P., of Whitehall Bungalow, Darwen, Lancs. newspaper proprietor, a former president of the Lancashire and Cheshire Newspaper Society, who died on March 8th, aged 73, left estate of the gross value of £40,092, with net personalty £18,478. He left to his son, Fred Riley, the goodwill of his businesses at Southport, and the newspapers, the *Southport Guardian* and the *Formby Times*, with their works, stock-in-trade, plant, machinery, etc., subject to the business liabilities of these businesses, and to one half of the annuities to the testator's wife and daughters. To his son Arthur the goodwill of his businesses at Darwen and Rawtenstall, and elsewhere in Rossendale, and the newspapers, the *Darwen News*, and the *Rossendale Free Press*, and the series of four other newspapers, published in connection therewith, on similar conditions.

THE football team run in connection with the Whitehall Printeries, Leeds (Messrs. Petty and Sons), have won the championship of the Leeds Amateur Association Football League.

Trade Union Matters.

GAMMETER MACHINES. — The Executive Council of the Typographical Association have been supplied with a copy of a letter from the Deputy Chief Inspector of Factories in reference to the Gammeter Multigraph machine. The letter states that the Secretary of State has no authority to give a binding decision on a point of law, but he is of opinion that printing on Gammeter and other "type" duplicating machines must be regarded as letterpress printing within the meaning of Schedule VI, Part I, of the Factory and Workshop Act, 1901. In cases, however, where such machines are only used intermittently, the Courts would probably hold that the Act could not be applied.

PAYMENT FOR DOUBLE-SHIFT WORKING. — The officials of the Typographical Association, in replying to an inquiry from the Hastings branch asking what rate of payment should be made to members working on a double shift, have intimated that such members should charge overtime rates for all hours worked outside the recognised day schedule of hours. It was also decided that if there are no scheduled hours in the branch they should be regarded as being from 8 a.m. to 6 p.m.

NUMERICAL PRINTING MACHINES. — The Leeds branch of the Typographical Association have forwarded the following resolution to the Executive Council, with the intimation that it would also be submitted as a new rule at the forthcoming delegate meeting:—"That on machines executing numerical printing from type-high numbering machines, the machineman shall receive an additional shilling per day (or part of a day)." The Council have decided to refer the matter to the Machine Investigation Committee, and are asking the Leeds branch for fuller particulars of the machine.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

F. M. Saddington and G. H. Duffield, advertising contractors, printers and publishers, at Royal London House, Paradise street, Birmingham, under the style of Messrs. Marshall and Co.

J. W. Collier, C. Collier and A. V. Collier, advertising contractors, at Lockhurst Works, Lockhurst street, Clapton, under the style of John Ford and Sons, so far as A. V. Collier is concerned.

H. C. Syratling and R. S. Wilsher, advertising agents and publishers, under the style of the "What's On" Guide Publishing Company, at 47c, Queen's-road, Watford, Hertford.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

E. S. Stock, of 62, Manor-road, Brockley, Kent, stationer, lately carrying on business at 95, Queen-street, London.

T. H. Tongue, 14, Bridge street, Exeter, hardware dealer and printer.

Cost Accountants and Price Control.

The fourth annual costing conference of the Institute of Costs and Works Accountants was held on Friday in London. The morning session was presided over by Sir Edgar Sanders, who urged business men to take greater interest in the subject of cost accountancy. Two papers were read on "Cost Accountancy and Price Control," one by Mr. S. Laurence Gill, A.C.A., F.C.W.A., and the second by Mr. Donald L. Moran, F.C.W.A. Each speaker referred to the suspicion with which any attempt at price control is viewed by the public. The cost accountant was advised to keep before him the possibility of prices having to be fixed on the statistics he compiles, and that whilst price-fixing is a matter of policy, and at present outside his duties, he may be called in for consultation at any time.

Mr. A. Williamson, F.C.W.A., who at the call of the chairman opened the discussion, said he wished to emphasise the point that some sort of price control was, in his opinion, inevitable; but his remarks must be taken as his own personal opinions. If it became general that the various industries set up systems of price control, it would be necessary to establish a basis on which the expenses might be recovered. Costs would have to be found by means of a standard system. After careful analyses had been made, he thought, it would be possible to fix a mean of the expenses over a period of years, taking in both good and bad ones. The setting up of a mean line for expenses must not be taken to suggest that it should remain on that basis. Frequent meetings of cost accountants would be necessary to check any variations, and all rises and falls should demand careful scrutiny. It would not be possible to maintain abnormal prices in normal periods, on the other hand it would be reasonable to expect a general all-round improvement in quality. Any attempt to boost prices would be doomed to failure, as it would result in a break-away by those firms capable of producing at a lower price. It would be impossible to make prices extortionate, as no general agreement would be reached if it were attempted. The fact that a reasonable price could be depended upon would enable firms to concentrate their attention on equipment and organisation, and by increasing efficiency and output, a lower price to the consumer would be the result. It was pointed out that the public was in effect paying in some degree for the lack of price control, inasmuch as every failure in business added to the cost of manufacture, as bad debts became a part of other producers' expenses and the dislocation caused by discharged workpeople affected trades union funds and the national exchequer. All failures to meet equitable charges have a way of hitting back at the consumer in an indirect way, and it was on these grounds, said Mr. Williamson, that his personal view was that a very careful exploration of the matter was desirable.

The afternoon subject was "Budgetary Control," and the papers were read by Mr. L. Perry-Keane, F.C.W.A., and Mr. F. T. Quennel, F.C.W.A. Sir Herbert Austin, K.B.E., presided.

It was a distinct loss to the conference that Lord Leverhulme, president of the Institute, was prevented by illness from opening the proceedings.

The Bookbinder's Greatest Problem.

By O. W. BRUEHMANN,
Of the Banner Bindery of St. Louis, Missouri.

The greatest problem to-day confronting the bookbinding industry, and one deserving of the most consideration is the conduct of the individual engaged in business. The consequences of individual conduct are known to every competitor. In the medium-sized or the small binderies, where the owner personally participates in productive labour the individual is a greater force in the making of trade conditions than the man at the head of large binderies. In these small binderies, the owner is usually a man who has risen from the ranks, and his business education is negligible. In the past his opportunity was limited to his own abilities in acquiring an education through experience. This lack of knowledge made him the prey of unethical practices on the part of buyers of bindery products. Then resulted trade conditions affecting other binders. Then came unfair competition and no profits.

Even to-day, with the advantage of trade organisations, the individuals entering the bindery business fail to co-operate with those who have had years of experience, and who are willing and ready to help in avoiding the pit-falls that lead to failure.

Mutual Confidence Necessary.

Usually the newcomer imagines that the old-timers are trying to eliminate him as a competitor. Confidence in those with whom we deal, when springing from a number of satisfactory transactions, is of greater value than all the legally phrased guarantees in the world. Confidence as a business asset is conceded to be one of the greatest aims for individual effort It is the foundation of all trade groups.

Nothing can have a greater effect on business than mutual confidence and respect of those in the same line., These stimulate business by eliminating unfair practices that are unprofitable and very detrimental to the industry. Confidence is the mutual acknowledgment of fair and impartial dealings between individuals.

We all admire a distinctive character whose achievements have placed him in the forefront of his chosen line of endeavour, and whose individuality has been expressed and emphasised in his every act and his business transactions with other men. These personal qualities have an outstanding effect on others engaged in the bookbinding business. When properly used they not only radiate widely through the business organisation with which the individual is connected, but spread to every other person with whom such individuals come in contact, and command the respect and good will of his competitors.

Danger of Sharp Practices.

We are all actuated by the same motives —to have and to hold as much of worldly goods as may be possible. In that we think alike, but in the fulfilment of our cherished desires we come to the parting of the ways. It is here that the individual character asserts itself and assumes a definite rôle in the affairs and conduct of the bookbinding business. The selfish motives being stronger in some than in others causes a few of the individuals to stoop to sharp practices regardless of the effect on local conditions.

Should the head of a large bindery engage in sharp practices the effect is of serious import, and tends to disorganise, disrupt and create dissensions among the bookbinders.

Where Leadership comes from.

The bookbinding industry needs in every community several individuals whose honesty and integrity cannot be questioned, whose dealings inspire confidence and create a spirit of mutual helpfulness, men who are large enough to place ideals above selfish motives and assume leadership in the promotion of honesty, confidence and co-operation among the binders. We are indeed fortunate in having such individuals in several communities who are devoting much of their time and money to the promotion of the best interests of the bookbinders of the entire country, men who are not visionary idealists, men who have been successful in the bookbinding business. Their unselfish devotion to the high ideals in promoting the interests of the bookbinders entitles them to the commendation of their fellow-craftsmen.

Lack of Adequate Cost Knowledge.

The unstable conditions due to a lack of cost knowledge, unfair competition, over-equipment and all the other evils we must contend with, are directly traceable to individuals. The confidence that they have in their ability to operate separately and independently is an obstacle that is hard to overcome. The meagre business experience they have had gives them, they imagine, a knowledge that is unassailable, and they think they need no cost system because they are so cocksure of their knowledge of what it costs to bind certain books. They insist that when they say a book can be bound in one hour it can be done.

Yet the human element entering into the binding of books often prevents this. As these individuals have no system of ascertaining cost (many of them do not even have time tickets), they are continually selling below cost and do not know what they have lost. In many of the small binderies the item of expense prevents them from installing a cost system and they do not realise that the fruits thereof will more than offset any additional expense they may incur by its installation.

No man will knowingly sell services at less than cost, but to obtain absolute cost some recognised system that will gather all the items that enter into the cost of production and doing business must be used. Time tickets only give the time actually used, and are not a system of cost finding. Having no knowledge of cost or hourly production, the individual is easily misled by the statements of the machinery salesmen and is soon loaded with machinery that is non-productive and unprofitable. Knowledge is power, and knowledge gained through a standard cost system is profitable.

From a paper read before the Fifth Annual Convention of the Employing Bookbinders of America.

Examinations at Stationers' Hall.

Those who consider that the decadence of British craftsmanship dates from the period when the Guilds ceased to function, would have had an eye-opener if they had visited Stationers' Hall during last week when some 800 students attending progressive technical schools connected with the printing, binding and paper industries, were sitting for an examination in their respective crafts.

On most evenings during the week there were about 250 candidates, and the series of examinations finished up with a Students' Reunion which was just as enthusiastically entered into as the more serious task of answering technical questions.

The splendid work carried on by the Stationers' Company and Printing Industry Technical Board, which arranges these annual examinations and provides a series of monthly lectures on some subject appertaining to the crafts represented in the Company, is making its influence felt in the printing industry. Those who were privileged to see the great assemblies of students during the last week in April were greatly impressed by their earnestness and with the fine type of students who presented themselves for a test of their technical knowledge.

The Technical Board, which is representative of the great printing industry is to be highly congratulated on the success of its efforts to further craft efficiency.

THE International Paper Co. is stated to have placed an order for two 164 in. Fourdrinier machines designed to turn out newsprint at a record speed.

The Library and the Binder.

By Mary E. Wheelock.

The business of bookbinding, whether it be edition or trade binding or library binding, touches the library interests at some very essential points.

From the beginning of libraries, we have been vitally concerned with the business of the publishers, and therefore with that of the edition binders who bind their books; for although book dealers buy in enormous quantities, they buy only to sell again, while libraries not only buy more books than any other single class of book buyers, but they buy them to keep for repeated use by their multitudes of patrons.

The very fact that libraries buy books to use, and that for such use a fair degree of durability is a most important consideration, accounts for our continued interest in methods of their general make-up. And as to the library binders, it is needless to say that their business is essential to libraries, who depend on them for rebinding the books as they become shabby and fall apart from use and for binding the periodicals which are thereby made available for a very important share of reference use.

Libraries Improve Binding Standards.

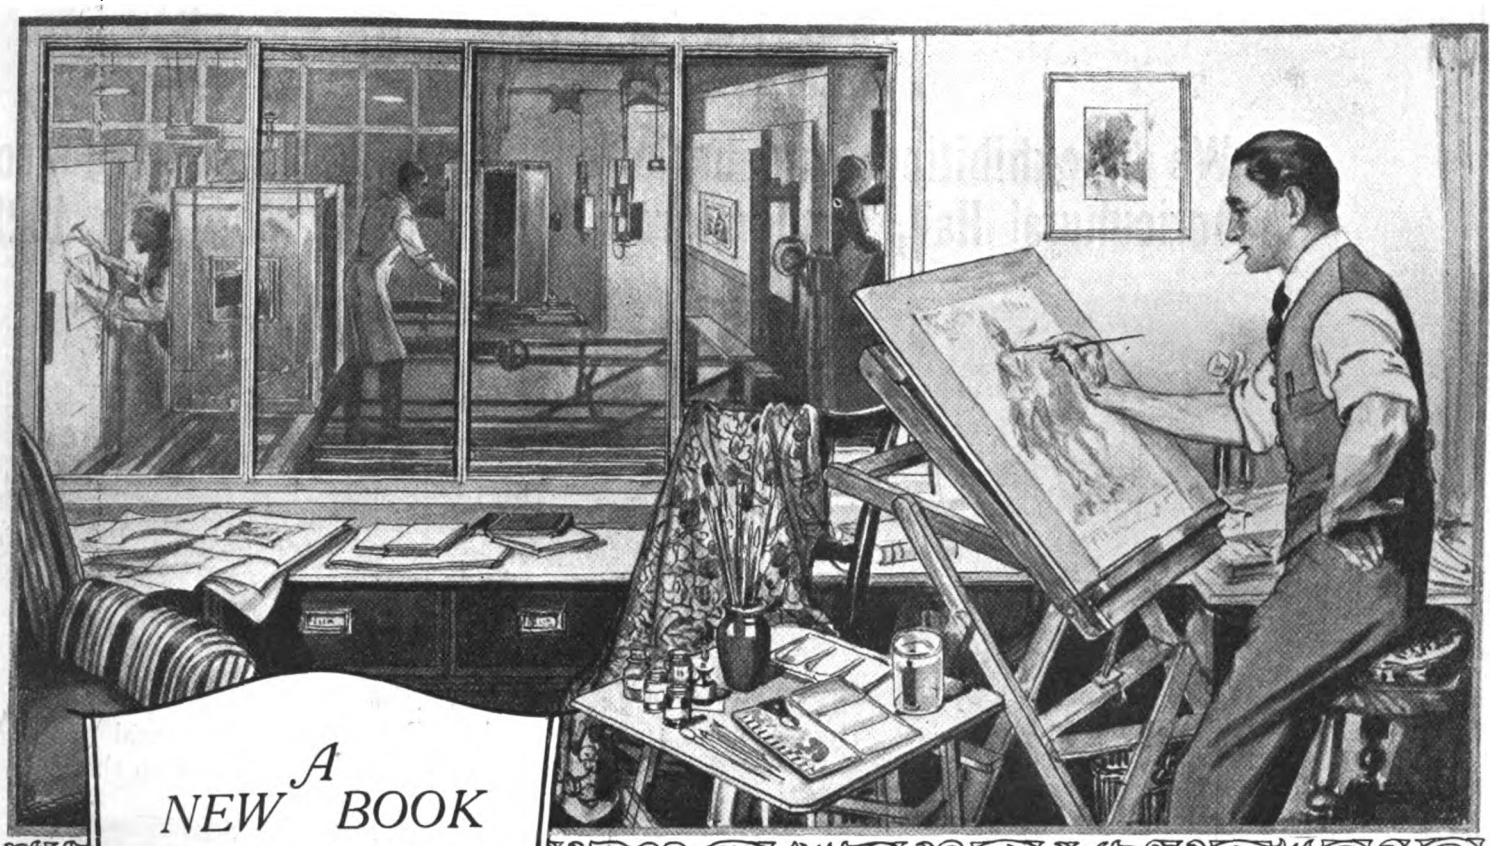
Large users of any commodity are sometimes in a position to suggest improvements in methods of manufacture of more or less importance, and often calling for little or no added expense but contributing to the increased value of the article. For nearly twenty years since the appointment of the first committee on bookbinding, the various successive committees have been active in enlisting the interest of the publishers to the end of more suitable quality of materials and workmanship for library requirements, and of the manufacturers of book cloth and leathers for improved standards of these materials.

In recent years special emphasis has been placed on the importance of more permanent paper for the better classes of books in place of the heavily bulked, spongy or calendered papers, employed almost universally during and after the period of the war and in lesser degree for several decades past, much of the latter having become so deteriorated after fifteen or twenty years as to be practically beyond use.

The complete loss of some valuable material is thus threatened unless of sufficient popularity to be reprinted. In some libraries it has been necessary to devise a definite course of procedure in order to safeguard such books from careless handling and consequent complete destruction. It will be but a question of a few years until the paper in a large proportion of these books of the last few generations will crumble beyond recovery.

While for years the advantage of better understanding between libraries and library binders has been recognised, it was not until the past two or three years since the organisation of the Employing Bookbinders of America, that definite co-operation was established.

Co-operation a Reality.



As the first tangible evidence of such common interest may be cited the general specifications for library and school book binding, worked out jointly by members of the A.L.A. Committee on Bookbinding and the Library Binders' Group and issued in pamphlet form a little more than a year ago and distributed among binders and libraries throughout the country to the number of more than 5,000 copies.

Thus the Bookbinding Committee has become the medium of expression between the American Library Association and the Employing Bookbinders of America, and with increasing mutual advantage as the aims and methods of each are better understood.

The above article is reprinted from the (American) *Bookbinding Magazine*, of which No. 1 of Vol. 1 has just been issued. This journal, whose publishing office is at Floral Park, New York, is assured of a welcome among United States trade journals, its contents being live and informative, and its get-up excellent.

MESSRS. H. A. YEO AND CO. have removed to 119, Queen Victoria-street, London (also 227, Upper Thames-street).

Printers' Whist Drive and Dance.

South-East Association Fete.

Under the auspices of the Association of Master Printers of South-East London a very successful and enjoyable whist drive and dance was held on Wednesday of last week at the Bridge House Hotel, London-bridge. There was a large gathering, and the company included many well-known representatives from other District Associations. Amongst those present were Messrs. Alfred Langley (president, L.M.P.A.), H. R. Grubb (president, South-East Association), J. Griffiths (vice-president), J. Brigenshaw, F. Mason (secretary, South-East Association), W. J. Boyle (secretary, Central Districts), R. B. Simnett (president, South-West Association), W. J. Mizen (secretary, North London Association), F. A. Perry, W. F. Willsher and E. G. Baker (assistant secretaries, L.M.P.A.).

The first part of the evening was taken up with the whist drive, in which most of the company took part, those not doing so engaging in dancing. The contest—carried on in a keen but friendly manner—revealed the following as winners, the prizes in each case being very acceptable ones: Ladies, Mrs. H. R. Grubb (1), Mrs. Berry (2); gentlemen, Mr. H. Harvey (1), Mr. A. G. Jackson (2); the mystery prize was won by Miss Pattinson.

After refreshments, which followed the drive, Mr. Grubb, on behalf of the Association, extended a welcome to members of the other District Asssociations, especially mentioning the names of Mr. Langley, Mr. Boyle, Mr. Perry, Mr. Simnett and Mr. Mizen. Mr. Grubb then expressed his pleasure at seeing so many ladies present, to whom he emphasised the importance of their husbands attending the monthly meetings of the Association in order that they might help to contribute to the common fund of knowledge for the benefit of the craft as a whole. Mr. Grubb also drew the attention of the members to the visit the Association is making to the paper mill at Eynsford, Kent, on Tuesday, the 19th inst.

Mr. Alfred Langley congratulated the South-East Association on its election of Mr. Grubb to the presidency. He then went on to speak of the long line of worthy men that had occupied that position, and referred to the special interest with which the activities of that Association were watched at headquarters.

Mr. Grubb then moved a vote of thanks to Mr. F. Mason, whom he described as their "splendid" secretary, who had had the task of arranging the evening's function.

The remainder of the evening was given over to dancing, the music being very satisfactorily supplied by the Grafton Dance Orchestra. The dance hall presented a fascinating and animated appearance, several of the items being made especially attractive by the employment of colour effects.

The singing of Auld Lang Syne brought a happy evening to a close.

WYCOMBE tinted banks are a very attractive line. The new sample range shows eleven different tints respectively in large post 15 lbs. and 11 lbs. Wycombe Marsh Mills have every reason to display these with confidence, the aim being to produce the best grades at the lowest possible price.

PRINTING: Its History, Practice & Progress

By H. A. MADDOX, City and Guilds Medallist.

AN excellent description of the appliances and work in a modern printing works for students of printing and all requiring an all-round knowledge of printing. A valuable chapter on paper in its relation to printing and a short sketch of the history of the printer's art are included.

"To the printer who desires to have a full and complete knowledge of his craft, as practised at the present day, the book is indispensable."—*The British and Colonial Printer.*

Price 5/- net.

MUSIC PRINTING AND ENGRAVING

By WM. GAMBLE.

THE author traces musical notation from the earliest known examples and shows in Part I. the rise and progress of music engraving and printing. In Part II. he deals with technicalities and illustrates the various methods and processes employed in the craft. This section, which is the larger one of the book, will be found to be of immense practical value.

"Both in matter and manner this volume will be found worthy of the unique position which it apparently holds in the bibliography of the subject."—*The British and Colonial Printer.*

Price 21/- net.

These books and others of special interest to printers can be examined at Stand 51 (Gallery) at the Printing Trades Exhibition

The Printing Exhibition.

EVERYTHING points to complete success attending the Seventh International Printing, Stationery and Allied Trades' Exhibition at the Agricultural Hall. Every phase of the industry has thrown itself whole-heartedly into the event, and a display is assured which must exceed any that has gone before. In one particular respect the organisers are fortunate this year—there is no labour dispute to affect the supply of power to the operating plants. At the previous Exhibition a coal crisis restricted the amount of power available, which in a case of this kind was a considerable handicap. The Seventh International promises to be carried through without any such hindrance. As indicated elsewhere in this issue, the display of printing and allied appliances and their products reveal the immense achievements which have been made up to the very eve of the Exhibition, and the printing industry has been second to none in its efforts to reach efficiency. Modern commercialism demands maximum output at lowest cost, and competition has forced this necessity upon the printers of this country. The various devices which are suggested to attain this object will be seen at Islington from May 16th to 30th, and this fixture will accordingly mark an important milestone in the progress of British printing.

The Federation Meetings.

MASTER printers and their ladies will be very busy at Buxton next week. The occasion of the 25th annual meeting of the Federation and Cost Congress afford an excellent opportunity of combining business with pleasure. Buxton is a delightful centre for the purpose. A programme of alluring dimensions and variety has been drawn up, the social side making a special appeal—to the ladies, at all events. Those responsible for the arrangements have been wisely guided in providing ample diversion for the fair sex, since by that means the attendance of members at the business meetings is assured. From Saturday to Wednesday there is a really wonderful round of social and business engagements. Following a reception on Saturday, a church service, garden party and concert on Sunday, the Cost Congress opens on Monday in the Town Hall. Important matters will then be taken into consideration. Mr. W. B. Wykes, the President of the Federation, will inaugurate the proceedings, and addresses will follow by Mr. Howard Hazell (the chairman of the Costing Committee) and by Mr. Mr. George Eaton Hart, who will speak on "Works Organisation as a means of Cost Reduction." Luncheon, a garden party, a civic reception and lawn tennis and golf competitions will afford alternative diversion during the day. The principal event on Tuesday is the annual meeting of the Federation, at which a big agenda will engage the attention of members. The annual report will indicate the variety and importance of the subjects dealt with during the year. New officers are to be elected, and there is a resolution regarding subscriptions. A report on the collective advertising campaign will be awaited with interest. "Apprenticeship Problems," a discussion on which is to be initiated by the president, will no doubt carry this vital matter a stage further. Lieut.-Colonel H. Rivers Fletcher is to present a statement on the present labour situation, and, finally, there will be a discussion on trade topics generally, which might well prove as enlightening and helpful as any of the other items mentioned. So it will not be all "junketing" in Derbyshire, and the printing industry will be helped considerably further along the path of progress by these deliberations. Tuesday and Wednesday include additional social outings and gatherings, of which the Federation banquet, with the Duke of Devonshire as the principal guest, is the chief event. Also informative however, will be the visit to the works of Linotype and Machinery Limited at Altrincham. Altogether the 1925 conference promises to set up new records which will redound to the credit of the industry.

Double Crown Club.

A RECENT development on the more artistic side of printing is the formation of what is appropriately called the Double Crown Club. It has the support of those who put art before commerce, but happily blend both with some success. Three qualifications make for membership. One must have directed the production of a distinguished printed work, or written about printing, or illustrated a book, so that the club is out to advance printing as an art rather than a mere branch of commerce, though it is being discovered that artistic printing means increased business. At present the members, thirty-nine, may be said to represent the thirty-nine articles of beautiful typography, says the writer of a London lettter. One of the most distinguished members is Mr. B. H. Newdigate, who has had a powerful iufluence on artistic printing and lettering. Mr. Francis Meynell, who has made the Nonesuch Press distinguished, is also a member, together with Mr. Michael Sadleir, the novelist, Mr. Harold Monro, of the Poetry Book Shop, and Mr. Douglas Cockerell, the famous bookbinder. At a recent meeting of the club Mr. A. W. Pollard, of the British Museum, who has opened a new era of Shakespeare criticism in terms of type, gave an address on "Period Printing," warning his audience of the dangers of imitating the modes of yesterday to the neglect of making advances in the styles of to-day.

Personal.

MR. STANLEY BALDWIN, the Prime Minister, was the principal speaker at the annual dinner of the Newspaper Society at the Hotel Victoria on Tuesday evening.

MR. WILLIAM ASTLE presided, and amongst those present were Lieut.-Col. H. Rivers Fletcher, Sir William Berry, Bt., Sir Edward M. Iliffe, M.P., Mr. Valentine Knapp, Sir Charles W. Starmer and many others prominent in the newspaper world.

BRIG.-GENERAL E. B. CUTHBERTSON, C.M.G., M.V.O., whose impending resignation was recently announced at a staff dinner, has now resigned his position as managing director of and from the board of United Newspapers (1918), Ltd., and from the board of the *Edinburgh Evening News*, Ltd.

MR. R. B. REED, works manager of the *Newcastle Chronicle*, was on Thursday last presented with a solid silver tea service and tray suitably inscribed on the occasion of his retirement.

MR. REED, in returning thanks, said that, with a break of a few years, he had been associated with the *Chronicle* for forty-nine years.

MR. J. W. WHITE, of Spalding, who for many years has been secretary to the *Lincolnshire Free Press* Company, and last year was chairman of the directors, retired on Thursday, after 53 years' unbroken service with the firm. The occasion was marked by the presentation of an illuminated address from the directors and staff of the company.

MR. FRANK COLEBROOK was the guest of the Paddington Rotary Club at their luncheon at the Hotel Graet Central on May 4th, Alderman Kenyon (ex-Mayor of Paddington) presiding. Mr. Colebrook took for his subject "What's Wrong with our Reformers?"

MR. H. D. KEATS, of Messrs. Mander Bros., and late of the London School of Printing, delighted the members of the South-West London Master Printers' Association on Tuesday night with an address on how to overcome troubles with ink. It was a most informative lecture, of which we hope to give a full report in our next issue.

MR. L. C. MENNELL (letterpress machine instructor at the London Printing School) gave a lecture entitled "James Russell Lowell, American Poet and Ambassador" before a large gathering of the Printing, Bookbinding and Kindred Trades Overseers' Association at St. Bride Institute on Tuesday.

MR. ROBERT W. COCKERILL, a York master printer, has been nominated for a vacancy in the Guildhall Ward of the York City Council.

ALDERMAN J. PYBUS, printer and stationer, Hull, who was formerly for thirty years on the staff of the *Hull News* as a compositor, has just celebrated his 80th birthday.

CAPT. C. HIGHAM last week addressed the members of the Manchester Publicity Club on the importance of weekly newspapers to the advertiser.

SIR FRANCIS GREEN (Chief Commoner), Sir John Baddeley, Sir T. Vansittart Bowater, Sir George Truscott, and Alderman J. W. Baddeley attended the luncheon given on April 28th by Mr. Percy Vincent, chairman of the Freemen's Orphan School of the City Corporation. A fine mansion at Ashtead Park has been secured for the school and will be occupied in September.

MR. W. A. BALMFORTH, editor of the *Manchester Evening News* for the past eleven years, retired from active service on Thursday of last week.

ON Tuesday last week his colleagues on the *Manchester Evening News* entertained Mr. Balmforth to dinner at the Reform Club, and on Thursday Mr. C. P. Scott, on behalf of the staffs of that paper and of the *Manchester Guardian*, made him a presentation.

THE editorship of the *Manchester Evening News* has been taken over by Mr. H. W. Archer, the former news editor.

MR. C. R. SEDDON, the president of the Papermakers' Association, is going into Wales for a month to recruit his health.

MR. C. NEWELL, C.C., president of the Stationers' Social Society, was on Wednesday, April 29th at the Grand Festival of the Grand Lodge of England at Freemasons' Hall invested with the rank of Grand Standard Bearer.

MR. F. G. HAWDON and Major R. Bonson were re-elected directors of Messrs. John Dickinson and Co., Ltd., at the recent annual meeting of the company.

FOLLOWING a severe illness, Mr. Arthur Herbert, general manager of Spicers (S.A.), Ltd., is on a visit to this country in search of renewed health. He is accompanied by Mrs. Herbert.

MR. S. C. D. GALLOWAY, who made an extensive tour in the East on behalf of Messrs. Samuel Jones and Co., Ltd., contributes to the firm's quarterly magazine an interesting description of his visit, the first instalment appearing with photographs in the April issue.

MANY complimentary words were said concerning Mr. Frank Lloyd and the directors of Edward Lloyd Ltd., on the occasion of the annual social held recently at Sittingbourne by the Paper Mills' Band.

MR. A. E. RICHARDS, chairman of the Recreation Committee, presided, and some interesting reminiscences concerning the early days of the band were contributed by Mr. George Rossiter, who has been at the Sittingbourne Paper Mills for 58 years, and by other members.

MR. W. R. RAYNHAM, who responded to the toast of "Success to the Firm of Ed. Lloyd, Ltd.," mentioned that the name of Mr. Frank Lloyd was honoured throughout the paper-making world, a fact which was due to his solicitous care for the welfare of the work-people.

MR. JOHN S. MCELWAIN, of Holyoke, U.S.A., an outstanding figure in the development of Holyoke's paper industry, recently celebrated his 97th birthday.

MR. J. A. CARPENTER, Kansas City, has been elected president of the National Paper Trade Association of the United States, and the vice-presidents are: Mr. J. C. Mallalieu, New York City (Wrapping Division), and Mr. A. M. Muller, Columbus, Ohio (Fine Paper Division).

"The Forerunners of the Craft."

Lecture by Mr. E. Fisher.

Mr. E. Fisher (Fry's Metal Foundry, Manchester), gave an interesting lecture at the Forester's Hall, Sheffield, on Thursday evening, April 16th, before the members of the Joint Industrial Council of the Printing and Allied Trades.

In dealing with his subject "The Forerunners of the Craft," Mr. Fisher commenced from the earliest ages when ideas which were to be handed down to posterity were remembered by professional men. One part of their work was to record moral codes and creeds, and it took something like thirty to forty years to attain competency in this work. It was really "writing on the brain," and a method thousands of years old. From that period there grew into existence a system of conveying thoughts and ideas by picturegraphs, several interesting specimens being shown on the screen. One of the slides showed several beasts whose heads and hearts were joined together by almost invisible strings, being a sign that they were all of one heart and of one mind. Similarly, knotted cords were used to express ideas, some of which were composed of strands of various hues, the red representing soldiers, the yellow, corn, and so on. The lecturer then dealt with Egyptian hieroglyphics, showing how the famous Rosetta Stone gave the key to the decipherment of these ancient and historical writings. Many valuable specimens were exhibited, including a parchment scroll of the "Book of Esther" beautifully written in Hebrew; a real bark book with writing on each side of the narrow bark leaves; ancient papyrus dating from the second century, and many other original pieces of illuminated manuscripts of great antiquity, the colouring of which was as bright as when they were executed. Facts concerning the slides and the many wonderful specimens were given in an interesting manner.

The hearty thanks of the meeting were voiced to Mr. Fisher by the president, Mr. T. S. Chalmers, and Mr. C. W. Woollans, it being remarked that Mr. Fisher had for many years given ungrudgingly of his wide knowledge of printing matters both as an instructor in typography and in other spheres of printing activity.

Mr. Fisher, in responding, urged young printers to take a keener interest in their trade, to study the best work, and to qualify for the most honoured positions which the craft can offer.

A SUCCESSFUL meeting of the Paper Trade Golfing Society was held on April 28th at Addington.

DIVIDENDS AND REPORTS.

WILLIAM COLLINS AND CO., LTD.—A final dividend is announced of 5 per cent., making 10 per cent. for year, carrying forward £15,030. (Dividend for 1923 was 7½ per cent., with a carry-forward of £9,080.)

SUNDAY PICTORIAL NEWSPAPERS (1920), LTD.—The directors' report, for the year ended February 28th, states that the results of the company's working have again been of a satisfactory nature. The profit, after deducting all working, office and other expenses, and providing for Corporation profits tax, contingencies, etc., and placing £40,000 to reserve account, which now stands at £120,000, amounted to £229,442 1s. 1d., to which has been added the amount of £15,296 4s. 2d. brought forward from the previous year. Preference dividends have been paid to the shareholders for the six months to August 31st, 1924, and interim dividends to the ordinary shareholders to February 28th last. After payment of these dividends, the remaining balance of £37,238 5s. 3d., has been reduced by the final dividend on the preference shares of £20,000 paid on April 1st, leaving £17,238 5s. 3d., which it is proposed to carry forward to this year's account. During the year the company subscribed a substantial portion of the share capital of the *Daily Sketch* and *Sunday Herald*, Ltd. This investment should prove of considerable benefit to the company.

MANSELL, HUNT, CATTY AND CO.—Dividend of 8 per cent.

Directors: A. H. Mattoessian and H. Williams. Registered office: 34, George-street, Manchester.

GUILLOTINE KNIFE GRINDERS, LTD.—Capital £600, in £1 shares; vendors and repairers of knives, cutting sticks and leads, stitching wires and all tools, requisites and lubricating oils for use in the printing, bookbinding and allied trades, etc. Private company. Directors: E. A. H. Walker and H. M. Speaight. Registered office: 2, Newcastle-road, Clerkenwell-close, E.C.1.

NORTH OF ENGLAND PRESS AGENCY, LTD.—Capital £500, in £1 shares. Private company. Directors: A. Lang, H. Goodman and L. Marks. Registered office: 92, Market street, Manchester.

WALL-DEN ADVERTISING AND THEATRICAL PROPERTIES, LTD.—Capital £100, in £1 shares; to acquire the business of advertising agents for hotel, commercial, theatrical and general users of advertisements, and dealers in all kinds of theatrical property carried on by E. Wallwork and G. Denham. Private company. Permanent directors: E. Wallwork and G. Denham. Registered office: 12, Norton street, Liverpool.

HAZELL AND CO. (PUBLICITY), LTD.—Capital £2,000, in 1,000 6 per cent. cum. pref. shares of £1 and 2,000 ordinary shares of 10s. each; to carry on the business of a publisher of directories carried on by W. G. Carradine at Beechcroft-gardens, Wembley Park, Middlesex. Private company. Directors: W. G. Carradine and Mrs. D. M. Carradine. Registered office: "Silverdale," Beechcroft-gardens, Wembley Park, Middlesex.

BRADSTREET'S REGISTER, LTD.—Capital £100, in 1s. shares; to compile, print and publish for the company known as Bradstreets, British, Ltd., and for its subscribers a private and confidential register of companies, etc., and for such purpose to carry on business in this country or in any other part of the world as publishers, printers, booksellers, etc. Private company. Directors: Guy Philip Harben, Sir Alan Hutchings, K.B.E., Charles Frederick Sutherland and Clement Francis Priseman. Registered office: Adelaide House, King William-street, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

GENERAL PRESS, LTD.—Debenture dated April 1st, 1925, to secure £2,500, charged on the company's property, present and future, including uncalled capital. Holders: Cassell and Co, Ltd., La Belle Sauvage, Ludgate-Hill, E.C.

EMERY PRESS, LTD.—Particulars filed of £10,000 debentures authorised April 9th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount now being issued.

FARRINGDON PRESS, LTD.—Issues on March 18th, of £250 and on April 17th, 1925, of £500 debentures, parts of a series already registered.

BURY PAPERMAKING CO., LTD.—Issue on April 22nd, 1925, of £400 debentures, part of a series already registered.

MAFFUNIADES AND CO., LTD. (stationers, printers, etc., London).—Second mortgage debenture dated April 9th, 1925, to secure £1,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: H. W. Preston and Sir John Stavridi, Kt., 12, Devonshire-square, E.C.

ADLOWS, LTD. (publishers, etc., London).—Debenture dated March 23rd, 1925, to secure £620, charged on the company's property, present and future, including uncalled capital. Holder: L. Taylor, 32, Glencoe-avenue, Seven Kings.

COLLEYS, LTD. (manufacturers of printed tickets, etc.).—Debenture dated April 17th, 1925, to secure £1,000, charged on the company's property, present and future, including uncalled capital, being a specific charge on 3-12, Marine-street, Bermondsey, and all real and leasehold property for the time being. Holders: J. S. Phillips and W. M. Drake, 25, Ludgate-hill, E.C.4.

RECEIVER APPOINTED OR RELEASED.

SHAKESPEARE PRESS (BIRMINGHAM), LTD (printers, etc.).—C. S. Steel, of 34-6, Gresham-street, E.C., ceased to act as receiver or manager on April 4th, 1925.

GEORGE LEATHER AND SON, LTD. (paper stock and metal merchants, Liverpool).—L. Nicholas, of 19. Castle street, Liverpool, was appointed receiver on April 23rd, 1925, under powers contained in debenture dated August 17th, 1923.

Paper Users' Difficulties.

By MR. W. J. POLLOCK.

Mr. W. J. Pollock followed Mr. Riddell in speaking on printers' difficulties with paper at the General Conference of the Technical Section of the Papermakers' Association on March 18th.

Mr. W. J. Pollock began by congratulating the papermakers and the mills in this country on the way in which they faced the post-war difficulties. He thought the difficulties following the war were even greater than those during that period. Mr. Riddell had mentioned that the finish was not the same on both sides of the paper. That was a very great difficulty on the mechanical side of printing, and it also created trouble with the customer. Mr. Pollock went on to refer to printers running regular series of paper, which after a time, when the order was repeated, was found to reveal a difference in the finish, and often a difference in the actual materials used. The more they could standardise paper the better. The necessity for trimming paper perfectly square was insisted upon, the speaker also complaining that in running through the paper on the machine they encountered various thicknesses and shades, which even changed in the middle of a ream. He explained the length of time and the expense involved in making ready a printing machine, pointing out that if a run was interrupted on account of a variation in the paper it was a serious matter for the printer. Moreover, the defect might not be found out at once, and a great deal of work be spoilt. All this meant, of course, increased cost to the customer; and Mr. Pollock maintained that if they could reduce the ultimate cost of printing to the consumer, there would be much more printing done, with benefit not only to the printer but to those who supplied the paper. The speaker also mentioned difficulties arising from the picking and peeling of art paper. With regard to the difficulties arising from fluff, he hoped that as a result of that meeting something would be done to minimise the trouble, because the fluff not only got on to the formes, but round the rollers, and even into the ink. With regard to ledger papers, Mr. Pollock complained of wrinkled edges and cockles. These caused great trouble in reducing the speed of the machine and when ruling up the paper. Irregular sizing was another complaint, because it produced blotchy lines.

Coming to the subject of boards, Mr. Pollock said sometimes on opening a parcel they began to curl, and it was almost impossible to feed a royal board into a machine when it started curling. Again there were occasions when sizes varied considerably.

The speaker then went on to refer to the state in which paper sometimes reached the printer, and he thought the papermaker would be grieved if he saw the results of the treatment which his product had received in the course of transit. Every ream of paper or parcel of board, should be correctly labelled, giving an accurate description of its contents. It would be a convenience to the printer, to the papermaker, and probably to the merchant if they could know how many reams there were in a bale or bundle, in which case paper could be ordered by the bale instead of in so many odd reams.

With regard to the multiplicity of quantities, he was sorry he must not mention standardisation of paper, because he started that movement in 1916. It had gone on steadily progressing, and he hoped in a short while they would have a fair measure of standardisation of paper in regard to the size, reamage, etc. There was another aspect of standardisation, namely, that the whole industry was suffering from too many varieties, which meant that they were carrying larger stocks than they need do, particularly the wholesaler and the printer, and in these stocks a large amount of capital was locked up. There was further the space occupied, and the expense of looking after the paper, as well as the value of the material itself. He submitted that a great many—from 40 per cent. to 50 per cent.—of these varieties could be eliminated. If such a reduction curtailed the amount of capital locked up, it would cheapen paper and print without detriment to anyone, and the customer would get the benefit, and be thereby induced to order more freely. The Stationery Office by standardisation had reduced their stocks by 30 per cent. to 40 per cent., and what was possible in their case he thought was possible throughout the whole of the industry.

Mr. Pollock suggested it might be possible to decide upon a standard number of formulæ for different grades of paper. Up to the present there had been a great mystery about paper and what it was made of, and he asked if it was necessary to keep up that mystery.

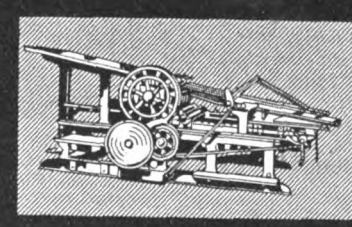
MR. W. J. POLLOCK.

Commander Pirie, in voicing the thanks of the Section to Mr. Riddell and Mr. Pollock for their extremely interesting papers, expressed appreciation of the fact that they had had master printers among them that day. The printers used a very large proportion of the paper which was produced, and the manufacturers must do all they could to help printers over their difficulties.

Who's Who

IN THE

PRINTING & ALLIED TRADES.



Mr. W. J. Pollock.

Mr. William James Pollock, whose recent address before the Technical Section of the Papermakers' Association is reported on this page, was born in a house in the vicinity of Fleet-street in the year 1868. He was apprenticed as a compositor at the printing house of Messrs. R. K. Burt and Co. (now Wyman's), in Wine Office-court. On concluding his apprenticeship he went to America, with the view of gaining further experience, sojourning in the States for several years. On returning home he started in business in 1896 on his own account in the West-end of London, with a small plant, but with all his type on the point system. In connection with the introduction of the point system into printing offices, it is interesting to mention that Mr. Pollock was one of the first printers in London to recognise its utility. Another direction in which Mr. Pollock assumed the rôle of a pioneer was in regard to the standardisation of paper. Mr. Pollock is a vice-president of the West and North-West London Master Printers' Association, an organisation of which he is one of the most popular members. He is also a valued member of the Open House Committee of the London Master Printers' Association. Besides occupying the position of managing director of W. J. Pollock and Co., Ltd., Mr. Pollock is also a director of other companies. One of his chief hobbies is foreign travel, his recent trip to South Africa being one of the latest examples of this.

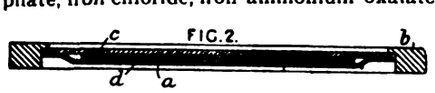
New Inventions

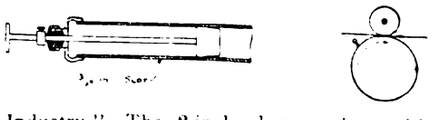
Direct or Offset Printing.



Mr. J. Hall has patented a two-revolution flat-bed printing machine, which is constructed so as to be capable of printing by the direct or offset methods by arranging an offset blanket on the impression or offset cylinder A, and arranging an impression cylinder D behind the cylinder A. When offset printing occurs an impression from the bed B is made on the offset blanket on cylinder A in its lowered position, and when it is raised a sheet is fed to the grippers *a* and is carried around with the offset blanket until it reaches the cylinder D, when it is transferred to grippers d^1 on to the cylinder D, from which the

printed sheet is delivered by tapes E and a flier *e*, or by grippers on a chain which deposit it printed side up. The cylinder D is controlled by trip mechanism E^1, F^{11}, which moves the cylinder D out of contact with cylinder A after the offset printing has taken place, or the cylinder D may be arranged so that the rising and falling motion of cylinder A also moves the cylinder A into and out of contact with cylinder D. In a modification a delivery cylinder may be arranged in front of the feed board, and in this case the sheet is not carried round the cylinder D, but after contact with cylinder D passes under the feed table, and is delivered by the auxiliary cylinder just after passing the feeding-in position.

Photo-Mechanical Printing Plates.



By an invention patented by Mr. C. Winkler in a Player-type copying process for making printing plates from non translucent originals by reflected light, the sensitised surface is carried by a film of celluloid, gelatine, linseed oil, etc., and the sensitised layer consists of gelatine, iron ammonium citrate, iron sulphate, iron chloride, iron ammonium oxalate

and either manganese or uranium salts together with potassium ferri- or ferro-cyanide. The originals *d* to be copied are placed on a sheet *a* of actinic colour and of the size of the forme, and over this a sheet *c* of sensitive film is stretched in a copying frame *b*. Exposure is made through the film *c*. The negative is then treated in a preliminary hardening bath of iron ammonium citrate and potassium ferri- and/or ferro cyanide, and finally hardened and dyed. For thick layers, an additional preliminary hardening bath of ammonium or sodium chromate may be used. The impression on the stone or plate is made directly from this film.

Water Deckle for Cylinder Mould.

To eliminate any unnecessary trimming of the sheet and to line up the deckles on the different cylinders more easily, the water deckle shown in the sketch has been used with good results, says "Paper

Industry." The 2-inch shower pipe, with a 3/64-inch slot is placed so that it washes the edge of the sheet from the cylinder mould back into the vat. The plug is set for the desired width of sheet, and may easily be adjusted to any other desired alignment.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

OTHER TIMES—OTHER CUSTOMS.

AS time progresses, we have to adapt ourselves to the more modern ideas by developing new appliances to speed up production and decrease manual labour.

Several important steps in this direction will be visible on Stand No. 6, Row E, Main Hall. Machines of interest to all connected with the Printing, Bookbinding and Allied Trades will be exhibited, several of them for the first time in this country.

OF course, the widely known series of Camco and Cleveland Folders will be shown. Every progressive printer who has not yet installed these, owes it to himself to investigate now. Because Camco Folders, being the speediest Folders made, the most accurate and the most versatile, are ideal employees and sure profit builders.

Therefore, as a matter of interest, and as a matter of good business, make a point of seeing—

Something New on Stand No. 6, Row E, Main Hall.

The Canadian-American Machinery Co., Ltd.

"CAMCO HOUSE,"

63, FARRINGDON STREET, LONDON, E.C.4.

THE ADANA AGENCY'S CATALOGUE.

EVERYTHING REQUIRED BY THE SMALL PRINTER!

Amongst the Most WONDERFUL and ASTOUNDING features of which a few of the points are:

TYPE - - - A system enabling us to place on the market in 1 lb. founts and heavier, the leading faces of Type from Monotype to Ring Founders. This system has taken nearly two years to get going, but now places us in a position to supply, at a ridiculously low figure, both special founts and sorts.

We are the Small Fount Experts. Our new Foundry, which has been erected at a huge expense, is now working at top speed stocking its warehouse on our new basis, which enables us not only to supply guaranteed first-class Foundér's Type at the lowest rate on the market but also to give you a Service in small boxed Standard and Supplement founts in 1 lb. weight at one Flat Rate Price. We use the hardest and best Metal obtainable and work to the finest degree of accuracy made possible by the use of the most sensitive micrometers.

TYPE CASES (Hard Wood partitions) ... ... from **9d.**

CHASES - - Guaranteed Mild Steel Interior Chases ... ... from **9d.**

BRASS RULE Labour Saving Founts **5/-**

PAPER - - - Having laid down large stocks of popular qualities of all kinds of paper and stationery we have evolved a method of handling standard cut sizes, which places us in a position to supply instantaneously practically any cut size at a price that will astound you.

A Post Card will bring our 32 page Illustrated Catalogue to your door per return post.

The ADANA AGENCY, 17, Church St., Twickenham

(TRADE SALES DEPT.)

In order that you may test the value of our goods we make the following offer to readers of "The British and Colonial Printer and Stationer," open for May and June only.

Birchwood Type Cases, (13½ x 10½) three ply, papered bottoms, sides properly housed, hard wood partitions, beautifully finished, weight packed 1 lb. 11 ozs. each **2/10**

Cabinets, to hold 5 inside, one on top, weight packed 4½ lbs., ... each **5/6**

Cabinets, complete with **Five Cases,** weight packed 10 lbs. ... each **19/-**

We are Exporters of Printing Material to Every Country in the World.

Paper Trade Golfing Society.

Successful Annual Dinner and Presentation of Prizes.

Mr. W. C. Powers, the popular captain of the Paper Trade Golfing Society, scored a great personal triumph on Wednesday last week at the annual dinner of the Paper Trade Golfing Society, held at the Trocadero Restaurant. It was an extremely happy social function and worthily fulfilled the object of the Society, which is to bring members of the paper and allied trades into agreeable association with one another. Dinner, speeches and concert were alike suited to the festive occasion.

Before the speeches began Mr. Powers, from the chair, presented the President's Cup and replica won on the previous day by Mr. F. C. Harding, "one of the best golfers," as the captain described him, and the worthy son of a worthy sire. Mr. Harding also received the Society's spoon for the best gross score, namely, 77.

Mr. Harding briefly replied.

Mr. Powers then presented to Mr. F. G. Whitaker and Mr. J. T. Chasney the spoons won in the foursomes in the afternoon.

Sir Frank Newnes then proposed the toast of the Society, and in so doing rivalled the fine humour of Mr. Nelson Jackson.

In a serious word, Sir Frank said golfing societies like that did a great deal to bring men of the same trade together and men of different trades. (Hear, hear.) There was no game like golf for getting to know a man and his character. (Hear, hear.) In associating the name of the captain with the toast, Sir Frank observed that if Mr. Powers played golf as well as he sold paper he must be a plus six man. (Applause.) He had known him many years, but had never succeeded in getting the better of him, their chairman always going away with 5 per cent. more than he was entitled to (loud laughter). Nevertheless, Mr. Powers was a very good fellow and a very good sportsman. (Hear, hear).

Mr. W. C. Powers, responding to the toast, after acknowledging Sir Frank Newnes' kindly references to the Society, said the thanks of the entire trade were due to the few enthusiastic spirits whose unselfish efforts resulted in the formation of the Society.

They now numbered well over 200, fully representative of the British paper trade and its various branches. Through the courtesy and generosity of his predecessor (Mr. S. C. Harding), the Alliance Challenge Cup, presented by him, was now competed for yearly by teams representing the allied trades. They all wished to express their appreciation of Mr. Harding's splendid gift, and for the good sportsmanship that prompted it. They hoped to have him back in good time for the next annual meeting. (Applause.)

Proceeding, Mr. Powers said golf was far the best substitute for business in taking up a man's time, utilising his surplus energy and discovering or uncovering any weakness in his make-up. (Hear, hear.) Their various associations enabled them to make new and to renew old acquaintances, to meet their customers in friendly combat, and to share with all good sportsmen that great freemasonry of the open air, which kept a man active well into his allotted span, and helped him to remain a *player* of games rather than a watcher. (Hear, hear) And in that spirit they thanked Sir Frank Newnes for his very kindly remarks about them. They all hoped to turn up year after year and see this youngster of theirs grow up from a three-year-old to a ripe old age. (Applause.)

At this stage silent tribute was paid to the memory of the late Mr. Joseph MacNaughton, who had intended being present at the dinner, and the health of Mr. George Buchanan, who had been very ill, was proposed. Messages of greeting was read from Sir Harry le Bas and Mr. S. C. Harding (from Port Elizabeth).

Mr. A. Dykes Spicer submitted the toast of "The Visitors," in an excellent after-dinner speech, and happy replies were made by Capt. Fish, Mr. E. Fifoot, and Mr. J. L. Greaves.

Mr. E. H. Raynham paid a glowing tribute to Mr. Powers in proposing the health of "The Chairman." Knowing him from the time he came from America 27 years ago, he had found him to be a fair competitor and a thoroughly white man. He was always ready to champion the cause of the British papermaker and was in fact, the most popular man in the paper trade to-day. (Applause.)

The toast was drunk with enthusiasm and was accorded musical honours, followed by cheers.

Mr. Powers, in reply, said the paper and publishing interests of Great Britain had been very kind to him and had helped him very much since he came among them as an awkward stranger 27 years ago.

The success of a delightful evening was rendered complete by an entertainment provided by Miss Rita Barnby (contralto), Mr. Reginal Johnson (baritone), Mr. Nelson Jackson (in original humorous selections) and Mr. Jos. Cowan (at the piano).

Attendance.

Those attending the dinner were:

Rowland C. Angel.

C. Baker, Kenneth F. Baker, A. S. Batchelor, J. M. Bathgate, A. Bonner, Capt. Noel V. Bowater, H. Bradly, C.B.E., A. E. Brown, Dr. J. M. Bullock, W. I. Burch, H. A. R. Butler.

R. Cairns, J. T. Chasney, Austin C. Clay, Stanley Cousins, Capt. G. N. Crisford, C.B.E.

J. Edgar Harmer Dalton, E. C. Day, C. S. Downing and guest, A. S. Duff.

Carl Eberstein, Robert Erikson.

Edgar Fifoot, Capt. D. H. Fish, M.C.

W. O. P. Gibbs, Philip T. Goldney, J. L. Greaves, R. G. Harvey Greenham, T. H. Groom.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE are some papermakers in this country (and perhaps in every other country where paper is made) who exercise very little control over the sorting and inspection of paper prior to despatch. In recent weeks we have had our attention drawn to several instances which point to absolute disregard of either self-interest or service to customer. In one case an utterly unusable consignment of stock was supplied for a special printing purpose, the paper right through the whole making having assumed the shape of a switchback. Mild attacks of wavyness or swelled edges can conveniently be rectified by hanging or maturing and the regular occurrence of such physical deficiency in paper is testified to by the invention of certain types of plant machinery for conditioning paper. The printer who wished to send his printed work out in an unconditioned state would not find his customer sufficiently accommodating to provide equipment to neutralise the ill-effects of damp ink. There is something in the suggestion that rectifying and conditioning equipment ought to be considered to be an integral part of the plant employed in manufacturing paper. Against this the papermaker would say that physical defects are introduced into paper long after it has left the mill. On damp railway trucks in a siding over a damp week-end, for instance. Or in the mildewed basement or leaky storage-room of the printer. Possibly during a period of ill-treatment in the merchants' stock-room. Granted all this, the fact remains that paper is often sent away from the mill in obviously bad condition.

* * *

ANOTHER case of careless supervision was that of a batch of coated art paper, branded grade and regular mill stock, which contained many torn and short sheets in addition to flawed sheets containing hard lumps on the surface. Any one of these in an unhappy position would be just sufficient to ruin a fine half-tone printing surface and hold up or jeopardise a printing order. A short sheet passed through a printing machine can quite readily and unavoidably spoil the next dozen sheets through the machine. And here is the value of branding, for the printer who meets with trouble through careless sorting of this particular paper knows for the future that there is at least one named paper to avoid. If mills could but realise how they secure a reputation for bad papermaking through inefficiency at the sorting end, there would be less occasion for papermakers to draw attention to cases of neglect. Another instance of recent date was a popular ledger paper, in one making of which the beating tackle had evidently shown signs of trouble. Particles of metal had found their way into the pulp and carried out their physical development in the finished paper, with the result that very few sheets in any ream escaped the disfigurement of a tiny fern-like growth. To the student of paper or the metallurgical chemist these growths may have a fascination; but to the buyer of paper and the practical papermaker, they are a source of annoyance and monetary loss. In the finished sheet as part of reams bought from the mill or merchant they are usually an evidence of careless work in the salle.

A CLOSER scrutiny of the statistics dealing with the imports of paper and cardboard for the first quarter of the year show that of the total quantity of packings and wrappings (1,174,566 cwts.) to reach this country during the period, Sweden's contribution of 460,258 cwts. represented not only nearly 40 per cent. of the total quantity, but an increase of 174,758 cwts. over that country's shipments of twelve months ago. Germany was the second largest supplier of packings and wrappings during the quarter, with 247,096 cwts., a figure which was 21 per cent. of the total, but marking a decline of 92,813 cwts. Norway followed pretty closely with 225,499 cwts. Here, however, there was a substantial advance of 83,098 cwts. compared with twelve months ago. Shipments from Finland (106,889 cwts.) were also larger, and surpassed those of the first quarter of 1924 by 32,364 cwts. As regards arrivals of printings, Norway was not only the largest contributor during the quarter, with 199,048 cwts., but improved upon her shipments of 12 months ago by 60,124 cwts. Printings from both Finland (170,048 cwts.) and Sweden (168,383 cwts.) were smaller, there being a drop of 78,881 cwts. in the former case and 9,329 cwts. in the latter. Consignments from Canada and Newfoundland together amounted to 134,385 cwts., against only 1,163 cwts. from those sources in the first three months of last year.

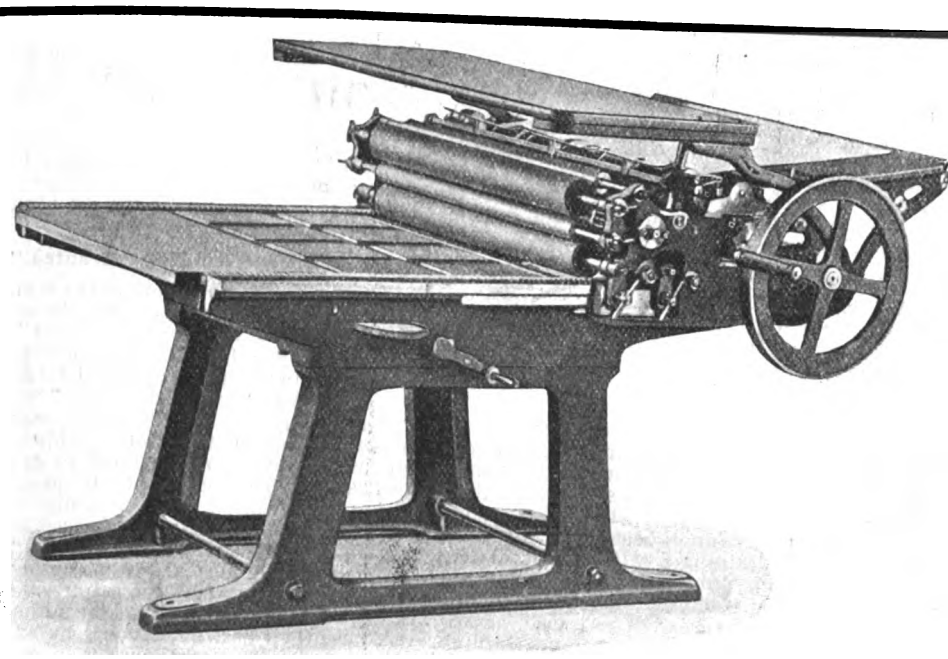
* * *

EXPORTS of British printings during the first three months of the year, amounted to 888,380 cwts., of which 91·8 per cent. was despatched to British possessions and 8·1 per cent. to foreign markets, the actual figures being respectively 815,955 cwts. and 72,431 cwts. The most prominent feature is again the big requirements of Australian consumers, whose purchases amounted to no less than 606,109 cwts. This figure was not only well over the average registered for a normal quarter, but indicated a big increase of 253,384 cwts., or 71·8 per cent., compared with the shipments of the corresponding period of last year. In value the exports of printings to this valuable British market, amounting to £912,732 during the quarter just concluded, represents an increase of £274,203 over the 1924 figure. The receipts of printings by most of the other enumerated British markets were mostly on the up grade, the principal increases being shown in the demands of British South Africa, Ceylon and Canada. Consignments to "other British possessions" were considerably larger (from 31,202 cwts. to 69,884 cwts.), but there was a big falling-off in the export of printings to "other foreign countries," viz.: from 130,918 cwts. twelve months ago to 58,104 cwts. in the first quarter this year.

RAPID progress has been made with developments in the manufacture of imitation cellophane by the mills represented by Messrs. H. D. Higham and Co. The material can now be made in all colours, which gives it an additional advantage in presenting packages wrapped in a transparent cover of the same colour as the box or other package to be displayed, through which any design or printed matter can be equally easily seen and read.

Directory of Papermakers.

With its 1925 edition, the Directory of Papermakers of the United Kingdom reaches its 49th annual year of issue. It is published by Messrs. Marchant Singer and Co., of 47, St. Mary Axe, London, at 5s. net. Authentically revised and brought up-to-date, the work serves a very useful purpose and is a reliable reference book of the paper industry. So many changes have taken place in the several sections that greater revision than usual has been necessary. The volume, therefore, is of great service to all who are interested in the manufacture, the selling or the using of paper. Of the 280 pages, 74 are devoted to an alphabetical list of the mills in England and Wales, Scotland and Ireland, details being furnished as to the sizes of machines and the grades of paper manufactured, together with postal particulars. There then follows a list of paper enamellers, surfacers, etc., papermakers' representatives and paper agents in London and the provinces, and London wholesale stationers. The reference value of the Directory is enhanced by a numerical index of the mills and an alphabetical list with the names of the occupiers. There is also a geographical arrangement and maps illustrating the situation of the various mills, so that in one way or another the location and ownership can be readily revealed. Not the least valuable section of the work is the classification of makes. Some 60 pages are devoted to trade designations as used by papermakers, wholesale stationers and so on. Section 1 deals with actual watermarks, section 2 giving trade names and similar designations which are not actual watermarks. The addresses of the firms mentioned in these lists provide another useful section. The inclusion of paper trade customs, sizes of paper, and paper trade publications completes the Directory, which is an essential adjunct for those who are interested in paper.



Salesmanship at Wembley.

The Association of British Advertising Agents is to stage a British and Imperial trade exhibit at the Wembley Exhibition, demonstrating marketing, merchandising, and generally the "selling end" of industry. The exhibit is designed to interest manufacturers, distributors and consumers alike, and will be displayed in a wing of *The Times* Pavilion which has been lent for the purpose. The Association of British Advertising Agents propose that the exhibit primarily shall be a demonstration how British export trade may be developed and the Empire consolidated by more efficient marketing and merchandising methods. The exhibit will be changed periodically so as to cover each portion of the Empire and each industry.

PAPER and printing establishments in Latvia have shown the following growth: 1921, 3; 1922, 25; 1923, 33; 1924, 42.

Soldans Lightning Proof Press.

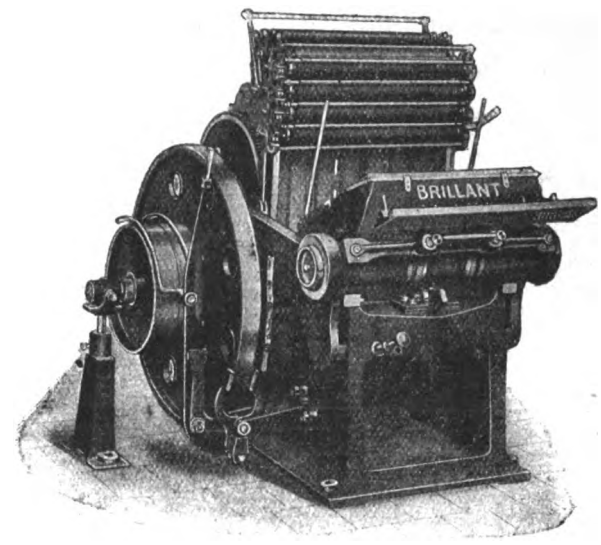
The Original and Leading Press for Proofs equal to Machine Proofs from Tied-up Matter, Formes or Galleys.

Adjustable Bed. Geared Inkers. Sizes:—Royal, Double Crown, Double Demy, Quad Crown

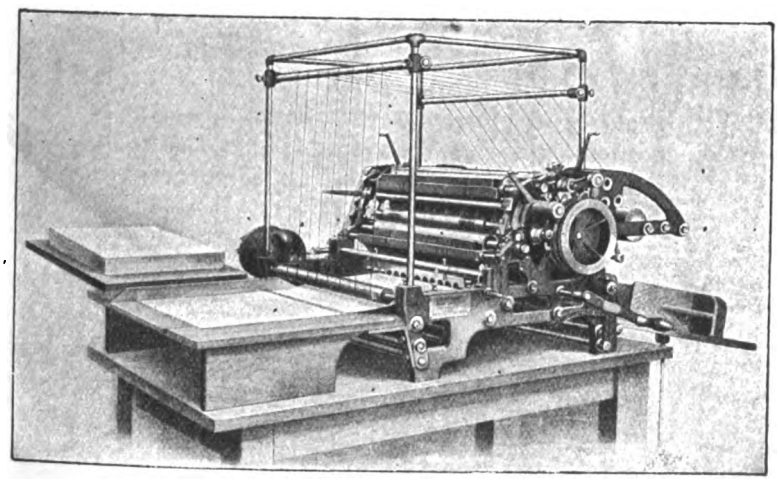
Undoubtedly the World's Leading Proof Press

Over 700 in use in Great Britain and Colonies alone.

Prompt Delivery.



The 'Brilliant' Fine-art Platen.



An entirely new model of this well-known machine, introducing the Camless Roller Carriage Action. No danger of 'bumping' through worn-out Cams and Tumblers.

MODERN DESIGN MASSIVE CONSTRUCTION FINISHED EXECUTION.

Built in 3 Sizes:—Inside Chase Measurements—
No. 1. 12½ x 17 in. No. 2. 14¾ x 19½ in. No. 3. 15¾ x 23¼ in.

The 'BRILLIANT SPECIAL' for Lighter Half-tone and Colour Work.

Model A. 19¾ in., Model B. 23¾ in. Model C. 27½ in.

The 'Baby' Jobbing Disc Ruling Machine.

A little masterpiece with a universal appeal.

Rules feint lines at 3000 per hour, and dead accurate stop-head work at 2000 per hour in two colours. Only one operator required.

Quick Make-Ready High Output.

The 'Baby' also CUTS, CREASES, PERFORATES and SCORES in the same operation or independently.

Other Machinery in operation at our Showrooms besides the above:—

The 'RECORD' Fast-running Cylinder Machine. Ball Bearing Drive.
The 'RULEX TANDEM' Combined Ruling and Printing Machine (First time ever shown in Great Britain).
The NEW FACE-UP PNEUMATIC PRINTING-DOWN FRAME for Photo-litho and Process Work.

Patents.

Some Popular Fallacies.

By F. W. VICKERY, O.B.E., M.I.MECH.E.

Perhaps the fallacy one hears of most frequently is the belief that a person has a legal right to make a patented article for his own use, and that as long as a sale is not effected, there is no infringement, the patentee has no ground for complaint, and has no remedy. This idea is carried even farther in some parts of the country, where it is thought—and fairly generally—that a patented article may be manufactured and passed to a friend for use, provided the article is a gift from the maker. Both impressions are entirely wrong, and it cannot be emphasised too strongly that neither has any foundation in law.

When a patent is granted, the owner receives with it: "Special license, full power *sole privilege* and authority" to "make, use, exercise and vend" the invention by "himself, his agents or licensees and no others," and he is granted the right to "enjoy the *whole profit* and advantage ..... accruing from the said invention." It follows, therefore, that no one except the patentee or some person authorised by him has the right either to *make* or to *use* the device protected by the patent.

Many people think, quite wrongly, that success in obtaining a patent may be accepted as a reliable indication that there can be no infringement of a patent previously granted. Nothing could be further from the truth, for it is quite possible to obtain a patent and still be unable to use the invention without infringing a prior patent.

A simple illustration will convey what is meant. Suppose it is possible for "A" properly to obtain a patent for a device consisting of legs carrying a flat top, which we will assume is a table. Later "B" applies for and obtains a patent for a drawer. "B's" patent gives him no right, in order to make use of his own invention, to employ the invention patented by "A," although it is true that "B's" drawer makes the table more complete and useful. On the other hand, "A," while able to prevent "B" from putting the drawer into the table, cannot himself incorporate it.

Unless "B" can work in association with "A," his patent has no creative value to him. It is possible, therefore, for a person to obtain a patent, quite properly and legally, for an invention which it is improper and illegal for him to use. Consequently, the mere fact that a seller has a patent is not a guarantee that it is safe for a purchaser to use the article covered by it.

The Conception of an Idea.

Another belief which is well circulated, but absolutely wrong, is that one person can upset the patent of another on the ground that the first person thought of the idea before the date of the second person's patent application.

Whatever the facts about the conception of the idea may be, in this country the right goes to the person who protects the idea. Even if the second person has gone a step further than "thought," and has put the idea on paper for his own sight, he cannot, because of this, stop another from obtaining a valid patent. There must have been publication: the invention must have been disclosed to someone in this country not under a bond of secrecy.

We have all met the man who goes through life with the grievance that someone else is reaping the benefit of his brains. In this connection, the small band of discontented people, who think that ideas equivalent to their own have been patented by others, appear to overlook the fact that the mere conception of an idea conveys no legal right to a monopoly. The law provides means whereby they can protect the fruit of their brains, and they are labouring under a delusion if they think that an injustice has been done to them because they have neglected to protect themselves.

It is surprising how susceptible some people are to self-persuasion after seeing an idea successfully worked out, and how quickly and easily they become convinced that they thought of it long before. In 25 years' work on patents I do not recall a single successful invention of a simple character in connection with which there has not been a claim by some person other than the actual patentee that he thought of the idea first, and, therefore, ought to be considered the true inventor. A claim of this kind is seldom supported by documentary evidence. Usually the case is based on mere oral testimony, and generally an unbiased mind finds difficulty in believing the testimony sufficient to upset another man's patent.

Still another erroneous belief is that the grant of a patent is an assurance that the invention covered is new and not already known to those skilled in the art of the trade to which it applies.

"Accepted" Not "Granted."

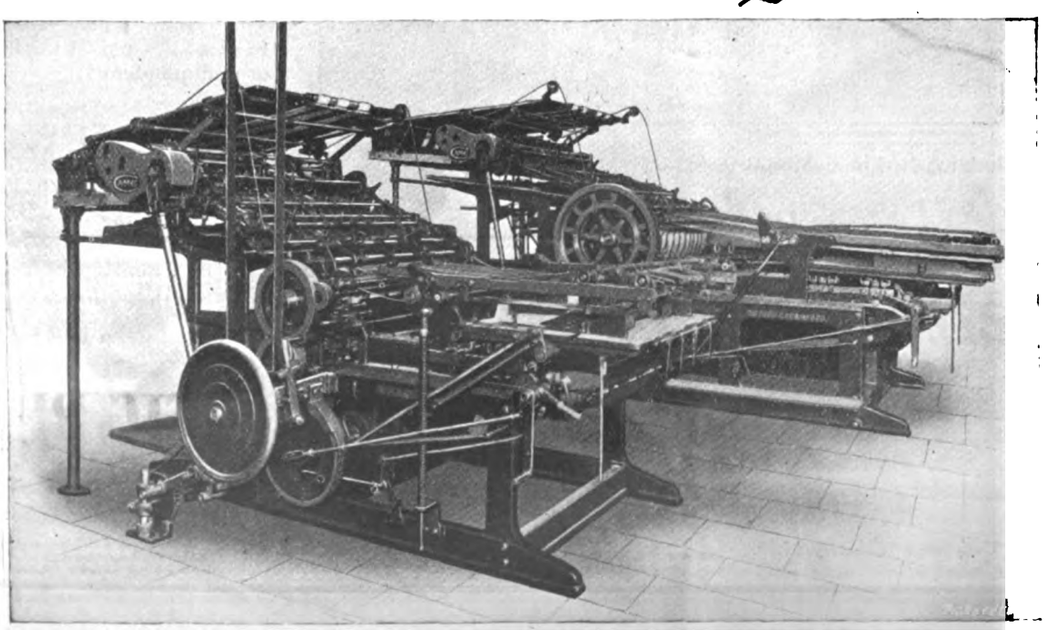
There is much confusion in the mind of the average business man owing to the use by the Patent Office of the word "accepted" after a search has satisfied the authorities that a British Patent is not on record for a similar article. An "accepted patent" is not a "granted" patent. It has merely reached the stage at which the Patent Office express themselves as being prepared to grant it, as far as they are concerned. It may, in fact, never be granted, as the public has two months from the date of "acceptance" in which objections may be lodged.

The Patent Office accept no responsibility for granting a patent for an article already known to the trade. What the authorities do is to use their best endeavours, by examining the records, to prevent more than one patent being granted for the same invention; but even on this point there is no guarantee. The responsibility rests with those in the trade to protect themselves against a patent being granted for something already known in that trade.

The fallacies I have dealt with are some of the most common. They are by no means all, but doubtless they will suffice for the purpose of this article.

If there are readers who are sceptical as to the possibility of beliefs entirely without foundation being held so generally and for so long a time, their doubts may be removed by reading "Popular Fallacies," the work of Mr. A. S. E. Ackerman, or "Extraordinary Popular Delusions," by Dr. Charles Mackay. These books, although they do not deal with matters as highly technical as patents, will, perhaps, be the more convincing because of the every-day nature of the subjects they mention.

Not exhibited — But none the less Valuable to Every Practical Printer.



YOUR press, be it a Miehle or other Letterpress machine, an Offset or Direct Litho', is not given a fair chance to give maximum output unless it is equipped with a Camco Continuous Automatic Feeder. Actual figures prove this—vide users' statements.

118 of these feeders were sold in March this year. Could one desire better proof of its efficiency? The Camco is more economical to buy, more simple in construction, and easier to operate than its competitors. Let us prove it to you!

The Camco Automatic Feeder.

We shall be pleased to arrange for a demonstration of the Camco Feeders under working conditions.

The Feeders illustrated are attached to Miehle Presses

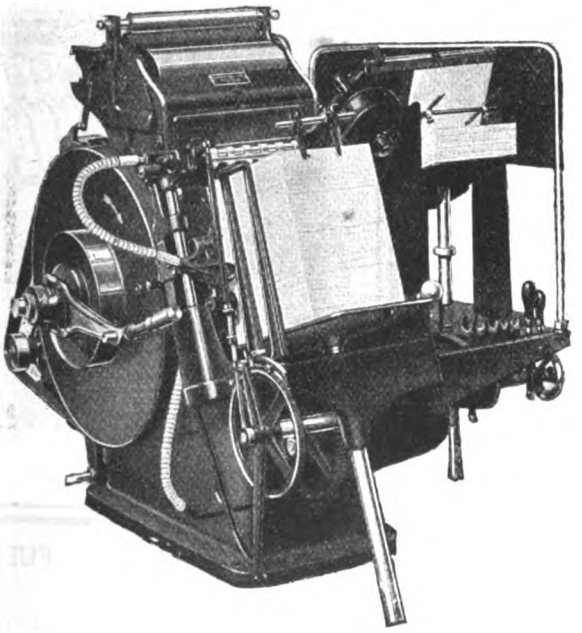
The Greatest Events in Printerdom!

A MACHINE that is in every respect suitable for the highest-class Illustration and Three-colour work and also for Jobbing. Built for efficiency and long service. Automatic Feed, 4 Bowl Rails, Cylindrical Inking, Clutch Drive, 3 Forme Rollers, Cylindrical Check, **Absolutely positive register.**



The Automatic Feeder fitted to the "Exquisit" is the very last word in simplicity and will eventually seal the doom of the present slow and tedious method of hand feeding. The stock is piled on a platform over the delivery table. A pump worked by the machine controls a row of suckers which automatically lift the top sheet and carry it forward to moving tapes, which swiftly and accurately deposit it in the lay gauges. An ingenious automatic side lay with micrometer adjustment positively draws the sheet sideways to its correct position. The result is a perfect feed, the accuracy of which would be impossible by hand. The adjustments needed for varying sizes of paper are only a matter of seconds, consequently the feeder is equally valuable for long or short runs. Should a sheet be torn or not be fed to the gauges the machine automatically stops. Any average minder could thoroughly master the feeder from the outset. It is practically foolproof and represents the greatest advance in automatic feeders yet produced, and is the biggest boon ever offered to the Master Printer.

"EXQUISIT" AUTOMATIC High Speed Stop-Cylinder

COMPLETE PRICES FROM **£495**

Sizes—
E.3, Royal
E.6, Dbl. Demy

COMPARE the performance of the ordinary hand-fed platen with that of the Heidelberg Automatic, and you will realize why so many printers have taken up this remarkable machine.

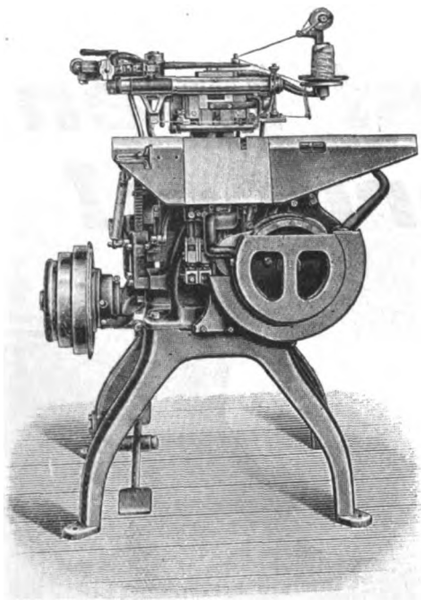
Its output? Under test conditions we have proved time and again that two Heidelbergs controlled by one operator* will produce more work than five ordinary platens with five operators. Increased production is therefore effected with an appreciable saving in wages costs. The guaranteed normal speed of the Heidelberg is 2,500 prints per hour; envelopes and small formes are taken two at a time, raising the output to 5,000 runs per hour. It is entirely automatic in feed and delivery, and takes all papers from Tissue to Boards with the minimum of adjustment. No feeders are required; it stops of its own accord when the job on hand is through or the paper feed emptied. The latest model includes a sheet counting apparatus, an additional steel rider to the inking rollers and a special brake feed control—practical refinements which every jobbing printer will appreciate. If you would like to see one working, ask us to arrange a demonstration. Incidentally, such demonstrations are given on absolutely standard machines—the same as you will eventually buy.

*The National Union of Printing, Bookbinding, Machine Ruling and Paper Workers (Printing Machine Branch) has agreed to the principle of one minder operating two Heidelberg Automatic Platens.

THE HEIDELBERG AUTOMATIC PLATEN

COMPLETE, INSTALLED and LEFT RUNNING **£185**

NOT showing at Agricultural Hall, but a SPECIAL EXHIBITION is being arranged where all Printers will be welcomed at :-



A FEW FIGURES:

Net weight—1,850 lbs.
Gross weight—**2,300** lbs.
Space required—3½ft. × 4½ft.
Maximum Height—4½ft.
Power required—¾ h.p.
Fitted for drive either by shafting or electric motor.
Size of paper—9½in. × 13½in.

Swiss Import Tariff.

The New Proposals.

A translation of the Bill for the revision of the Swiss Customs Tariff and of the proposed new general tariff, import and export, appears in the *Board of Trade Journal*.

The following rates of import duty are suggested for paper and products of the graphic arts (Class VI), all per 100 kilos:

A.—Papermaking Materials.

Rags; waste paper; other waste for the manufacturing of paper, such as old cordage, etc., 10 cts.

Fibrous paste for the manufacture of paper: (NOTE.—Fibrous paste, in the form of paper or board, can only be included under these numbers, if the sheets are perforated before importation, so that they cannot be used as paper or board.)

Manufactured mechanically (wood pulp); rag pulp, 3 frs. 50 cts.

Chemically prepared: Unwhitened, 5 frs.; whitened, 6 frs.

B.—Unprinted Boards and Papers.

(1) *Not having undergone any process after manufacture.* (NOTES (1).—The term "board" applies to products weighing 400 grammes and more per square metre. Articles of a less weight are taxed as paper. (2) Products in a form other than rectangular sheets, as well as those in rolls of less than 25 cm. width, are considered as papers or boards having undergone a process after manufacture, *i.e.*, paper goods. 3.—Board in sheets having a surface less than 0·6 square metre is considered a cardboard article.

Board (*carton*):—Formed by one layer or several layers pressed when moist: Ordinary, such as: grey board, wood or straw board, leather board, etc.: In sheets of which the four sides are untrimmed, 15 frs.; in rolls; in sheets with cut edge, 20 frs.; other, 25 frs.; sized, 35 frs.

Papers: Packing paper: Rough on both sides; ordinary straw paste paper, 20 frs.; other, 25 frs. Blotting paper, filter paper, filtering sheets of fibrous paste, 30 frs. Printing, writing and drawing paper: Paper for newspapers, containing wood paste and weighing from 48 to 55 grammes per square metre, 20 frs. Other: Of one colour, weighing per square metre: More than 250 grammes, 30 frs.; from 30 to 250 grammes inclusive, 35 frs.; less than 30 grammes, 40 frs.; of several colours, 40 frs.

(2) *Having undergone a process after manufacture.* (NOTE.—Board and paper bearing printed or stamped characters are taxed as printed papers under *c*. The watermarked trademark of the manufacturer is not taken into consideration in classifying for duty.)

Chalked board, board coated with colour or covered with paper: With smooth surface, of one colour, 30 frs.; other, 35 frs.

Packing paper: Tarred, oiled, asphalted also re-inforced with coarse fabrics, 30 frs.; other 30 frs.

Printing, writing and drawing paper, wrapping paper, etc.: Ruled, also laid, 40 frs.; coated with paste (gummed paper), 45 frs.; chalked or coated with colour, smooth, of one colour only: Chalked or coated on one side only, 45 frs.; chalked or coated on both sides, 50 frs.; other: shagreened, goffered, creped, pleated, perforated, watered, with coloured designs, etc., 45 frs.

Oiled paper, paraffined, waxed, tracing, parchment or parchment paper and similar papers, 40 frs.

Paper chemically prepared: Sensitised paper, even cut, 55 frs.; chemically prepared in other fashion, 45 frs.

Paper combined with other products: With fabrics, not mentioned elsewhere, 40 frs.; other, 40 frs.

Cut board and paper, of a width less than 25 cm.: Board; packing paper, 40 frs.; printing, writing and drawing paper, 55 frs; others, 60 frs.

Board and paper prepared for retail sale, without wrappers, etc., 70 frs.

Coloured wall-paper, 40 frs.

Board and paper having undergone some process after manufacture, not mentioned elsewhere, 50 frs.

C.—Printed Board and Papers not mentioned elsewhere.

(NOTE.—This category also includes printed matter specified in E when the tax applicable under C is higher.)

Picture cards, cards used for greetings, etc.: Without decorations or applications, 220 frs.; with decorations or applications, 300 frs.

Catalogues, prospectuses, posters: In sheets or sewn: Printed in a single colour, 150 frs.; printed in several colours, 200 frs.; bound, surtax of 30 frs.; framed, surtax of 40 frs.; others, surtax of 60 frs.

Envelopes, paper bags, paper capsules: Without decorations or applications, 200 frs.; with decorations or applications, 300 frs.

Playing cards, 300 frs.

Printed matter not mentioned elsewhere: In loose sheets or stitched: Printed in a single colours, 150 frs.; printed in more than one colour, 200 frs.; bound, surtax of 30 frs.; framed, surtax of 40 frs.; others, surtax of 60 frs.

D.—Books, Reviews, Prints, Pictures.

Printed books: Unbound, 5 frs.; bound: In combination with precious metals, 500 frs.; others, 20 frs.

Maps and charts: In sheets, not mounted, 10 frs.; mounted, bound, 20 frs.

Music: In loose sheets or stitched, 5 frs.; bound or in cases (portfolios), 20 frs.

Reviews and periodicals: Fashion periodicals, 30 frs.; others, 5 frs.

Prints, engravings and photographs (products of the graphic arts): Unframed, 100 frs.; framed or in stretchers, 150 frs.

Pictures and drawings, by hand: Unframed, 100 frs.; framed or in stretchers, 150 frs.

E.—Bookbinders' Wares and Wares of Cardboard; Paper Wares.

NOTE.—Articles in this class which bear printed characters will be dutiable under class VI. C, if the rate applicable as a result of the printing is higher.

Cardboard in rectangular sheets of an area less than 0·6 sq. metre or cut out in sheets of a particular shape, and not joined together: Packing cardboard and cardboard boxes; cardboard tubes: Not covered, 70 frs.; covered, 150 frs.

Envelopes: Packed loose, more than 200 envelopes in common packing boxes, 120 frs.; others, also with letter paper, in boxes, etc., 160 frs.

Paper bags and capsules: Pasted or folded, not combined with other materials, 80 frs.; others; double bags, 160 frs.

Cards for jacquard looms, 40 frs.

Cops for yarns, etc.; bobbins for yarns, etc., 60 frs.

Writing books, such as commercial books, agenda books, etc., letter copybooks, tracing pads, etc., 150 frs.

Calendars stuck on cardboard (wall and leaf calendars); blocks for leaf calendars, 150 frs.

Book covers; portfolios; classifiers, also with index, 150 frs.

Paper serviettes, paper wrappers for cakes, paper strips for boxes and shelves, 80 frs.

Paper flowers and leaves, 250 frs.

Bookbinders' wares and cardboard and paper wares not mentioned elsewhere, also with indispensable metal accessories, such as eyelets, suspension rings, joints, etc.: In combination with leather or fine materials, such as silk, velvet, mother of-pearl, ivory, agate, etc., 350 frs.; others, 200 frs.

Class XII. provides for varying rates according to weight for machines, etc., including machines used in papermaking, graphic arts, binding, and for making cardboard wares: For the manufacture of fibrous paste and paper, printing presses, others.

Class XVI. includes plates for printing books and engravings: without designs or writing, 10 frs.; other 80 frs.; cylinders for printing stuffs and for making wall-papers: not engraved, 10 frs.; engraved, 30 frs.

Russian Paper Industry.

The board of the North Western Industrial Bureau in joint session with a committee of the Supreme Council of National Economy has just confirmed the productive and financial plan of the Leningrad Paper Trust for the next five years. The scheme provides for an increase in the output of paper from 20,000 tons in 1924-25 to 72,000 tons in 1928-29. Included in the plan is a proposal to construct a cellulose works on the River Syasi, with a production of 48,000 tons, together with a paper mill for an annual output of 24,000 tons of news-print and 21,000 tons of wood pulp. It is estimated that the expenditure on the complete works will amount to 12,050,000 roubles and the scheme contemplated the starting of the works in the year 1926-27.

Canadian Paper Samples.

At least one Canadian mill has nothing to learn from us and very little from our friends in the States concerning the making up of paper samples. It is equally true to say the same of their papermaking. Too generally it is accepted as all-embracing that Canada is the promised land of news-print. Here we have to hand a batch of samples which cover antique and plate finished book papers with deckled edges, cover papers which are typically English in character, white and tinted bond papers which are typically American, fine writings, vellums and parchments watermarked and finished as for the English market, and lastly, a miscellany of printing papers which embodies M F., S.C., eggshell finish, bulky antique, tinted programme and offset book-printing grades. They are all the product of the Howard Smith Paper Mills, Ltd., of Montreal, Canada, the most progressive concern of its kind in the Dominion. The presentation of the goods (they are all branded and sold through the merchant) is skilled and artistic. In a preface to one sample book we read that "the policy is not to sell direct to the printing trade, as we find that better and more economical distribution can be made through the medium of the merchant." That is an interesting commentary on the subject at issue in our own industry. It also explains the amount of attention given to sampling, observing that the Howard Smith Mills not only make their own paper, but develop the sales for it. Doubtless they keep every reputable printer, publisher, advertiser or user of paper well posted with their samples.

Each sample booklet is devoted to one grade of paper in most cases, and there is a suggestive treatment thought out for the cover. Inside there is a well-written introduction. The writing papers carry fine examples of treatment for printed or stamped headings. Mostly the user is told what the paper is made of, and by demonstration he is shown what it can be used for and how it can be used. A range of cover papers is supplemented by a series of artistic folders, or fillers, as we call them, arranged and printed in colours after the modern school of thought in advertising. Lastly, and we have not space enough to adequately pay tribute, there is a remarkably fine full-sized quarto booklet devoted to a demonstration of de luxe deckled edge book papers, covering three grades, Carlyle Japan, Bard of Avon, and Byronic Book. The cover paper is Carlyle Japan, India tint, and its printing and embossing quality has made possible a really beautiful and simple design, which would have the merit of cheapness to produce. Fourteen full pages of several grades and tints of the papers are used to carry out ideas in printing and decorative treatment, and they are worth a lot to any printer who uses creative ability at times or to the advertising specialist who always builds his work. Then there are the samples of the grades, examples of papermaking equalled by two or three mills in England. A page could be devoted to their appearance, which is a sheer delight to lovers of the de luxe atmosphere in paper and print.

Spicers, Ltd.

Captain Ronald Spicer, M.C., was elected a director of Spicers Ltd. at the board meeting of the company on April 22nd. He is the second son of the late George Spicer, J.P., of Enfield, and represents the 8th generation of Spicers, tracing his descent from the original Edward Spicer, who was born in 1645 and owned a paper mill at Chepping Wycombe.

All Captain Spicer's business life has been associated with paper. Before the war he was a publisher, in partnership with Mr. Andrew Melrose. Immediately following the armistice he entered the house of Spicer, and now joins his brother, Mr. Douglas Spicer as a director. He is an M.A. of Trinity College, Cambridge.

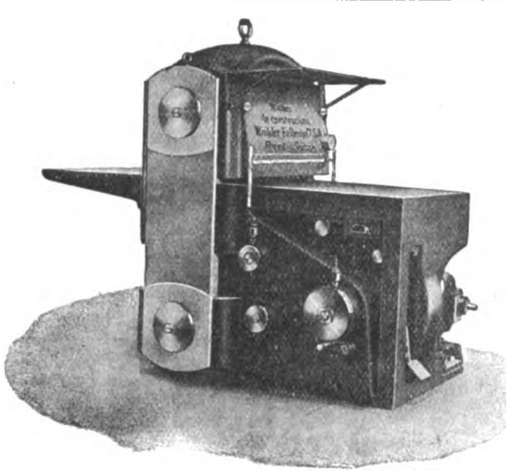
Captain Spicer holds a commission in the Honorable Artillery Company. In the first year of the war he served in the ranks of that force and for the last 3½ years he was an officer. In the interval he was wounded at the Battle of Hooge in June, 1915. All his overseas service was in France.

THE late Mr. James Gibson Croal, Haddington, printer and publisher, left £13,873.

Paper Mill Presentation.

A presentation of a two valve wireless set and loud speaker was made on Thursday, April 9th, at Ordsall Hall Paper Mills to Mr. Stoddard, salle foreman of Messrs. Chadwick and Taylor, Ltd. Mr. Stoddard has been a foreman of the firm for the past 25 years, and originally came from Ballyclare. He has reached the age of 72 years, and has decided to retire and spend his future years amongst his relations in Northfleet.

Before making the presentation, Colonel Chadwick said everyone at Ordsall would miss Mr. Stoddard, because during his 25 years of service with Chadwick and Taylor all who came in contact with him had grown to regard him with respect and affection. He was a tireless worker, and his knowledge of the "news" trade was very extensive. He was, however, about to take a well earned rest. In conclusion, Colonel Chadwick said he felt sure that he was voicing the feeling of all those present when he wished Mr. Stoddard many years of health and happiness with his family in the South of England.



Mr. Cottrill, Mr. Williams, Mr. A. Smith and Mr. Wilcox each paid tribute to Mr. Stoddard.

Mr. Stoddard in reply thanked everyone and said how happy he had been at Ordsall.

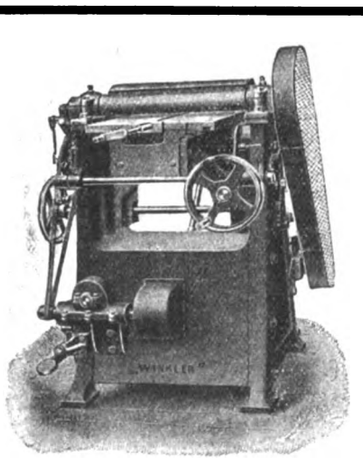
Amongst those present were Mr. Holden, the office staff, and a representative gathering of 60 employees.

THE late Mr. Joseph Line, wall-paper manufacturer, Tottenham-court road, London, left £29,361.

MR. C. E. WILLIS has gone into partnership with Mr. W. Dawson under the style of Dawson and Willis, paper agents, at Sentinel House, Southampton-row, London. W.C.1. This firm are the sole agents for the following Italian and French mills for the United Kingdom: Cartiera Burgo, Cartiere Binda, Cartiera Ferdinando Dell'Orto, Bagarelli and Co., Papeteries de Rives and Papeteries de Sorel-Moussel. The classes of papers handled include high class writings, book papers, coated papers, flints, folding box boards, cover papers, etc.

"Winkler"

Automatic Folding and Drying Press.



For Fine Art and Newspaper Moulds, Dry and/or Wet Flong—Hot or Cold—with Electric or Steam Heating.

Equals in capacity THREE Pneumatic Presses.
The Matrix is moulded and dried in one operation, the drying taking place under reduced pressure (patent).
The Moisture is extracted by a suction pump.
Automatic Temperature Control and Time Switch.

¶ Produces, in conjunction with Light's "Photo-Tone" Fine Art Flong, Half-Tone Matrices of finest screen so accurate that stereos cast therefrom are facsimile to originals.

¶ Perfectly even pressure throughout the surface of the platen is absolutely guaranteed, in contradistinction to all stereo presses operated pneumatically, hydraulically, or by hand power, which have centrally actuated platens inevitably more or less deficient in equality of pressure.

¶ Saves Type, Time, Labour, Power and Fuel.

"Winkler"

Flat Plate Milling Machine.

Mills plates from type-height to pica-height, guaranteed true to ½ thou. of an inch throughout. It combines the functions of two different machines—the Roughing Machine and the Shaving Machine—because it mills the plate in **one** operation down to the desired height.

¶ Insure top-notch printing results by building your plant on a foundation of top-notch Stereotyping Units—the "**Winkler**" Outfit.

¶ The basis of perfect pictorial stereo production is blocks uniform in height, perfect in depth, even in printing surface, and hard in wear.

¶ Progressive printers have adopted the ideal method of mounting their plates exclusively on soft metal bases which have been planed true to a fraction of a thou. on a "**Winkler**," thereby **saving about 50% or more on "make-ready" on the printing press.**

Particulars can be obtained from, and a demonstration arranged by the Sole Agents:

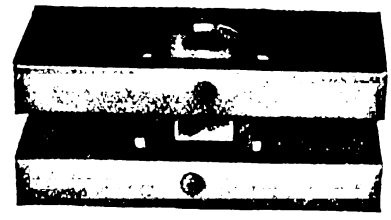
THE Monnery Register Quoin

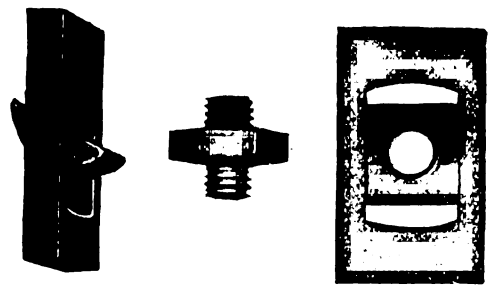
(PATENT)



IS A DISTINCT IMPROVEMENT IN MACHINE ROOM EQUIPMENT.

No. 1—30/- per doz.

No. 2—30/- per doz.



No. 3—36/- per doz.

ONE KEY FITS ALL SIZES AT 6d. each.

Designed and manufactured by ourselves, we claim that for strength and durability this Quoin is unsurpassed by any other on the market.

Amongst its many novel features is the ease with which it allows a block (even though in the centre of a forme) to be moved an infinitesimal fraction without disturbing the surrounding matter.

Swivel joints are incorporated in the mechanism, enabling blocks to be locked in a forme at almost any angle, with the maximum ease and with no possible chance of movement after the forme is ready for press. This feature will be readily appreciated by printers specialising in Three-Colour work.

After a series of the most exacting tests from which it has justified all we claim, we invite you to give it a trial yourself, and we confidently look forward to your enquiries.

The Monnery Register Quoin may be inspected at our Showrooms: 15-16, Thavies Inn, Holborn Circus, London, E.C.1, at any time.

Water Resisting Paper.

A New Invention which Given Useful Properties.

A British patent in the name of Dr. Ernst Fues relates to an invention concerning water-resisting paper. The invention is an improvement in or modification of that claimed in Specification No. 187,987 and comprises treating paper with acid substances or formaldehyde, or with both, the paper being dried and subjected to a subsequent heating process. Further investigations have shown that in carrying out the process in question, other substances than acid salts or acids can be used with advantage such as a series of salts, more particularly of chlorides which (such as for instance calcium chloride and magnesium chloride) are of a neutral character, but in given conditions possess the property of acting like an acid.

It has been found, moreover, that the properties of the papers to be produced in accordance with the prior process can be improved by utilising at the same time colloidal substances such as casein, animal glue, etc., which, in given conditions, become hard and insoluble. The incorporation of the colloidal substances can precede the treatment of the paper with acid-acting substances and formaldehyde; for instance, by adding casein or animal glue to the rag-engine. However, it has been found possible to use them also simultaneously; for instance, by impregnating absorbent paper with a solution which, in addition to acid-acting substances and formaldehyde, contains also, for instance, animal glue. It has been found particularly advantageous to use for this process the salts hereinbefore mentioned such as calcium chloride and magnesium chloride, since it has been found that solutions of these salts are capable of dissolving relatively large quantities of animal glue even in the presence of formaldehyde.

Various properties can be given to the papers made water-resisting by suitable methods of treatment; for instance, flexibility or suppleness, by treatment with certain hygroscopic substances. It has been found that to attain the object in question it is not necessary to subject the paper to a separate treatment with such substances. On the contrary, it is possible to add the substances in question, for instance, glycerin, sugar, etc., to the solution rendering the paper water-resisting. When for producing the water-resisting quality salts are used which, in addition to their acid action, are at the same time hygroscopic, the addition of separate hygroscopically acting substances is unnecessary.

Finally, it has been found possible to utilise the process also for colouring the paper, by incorporating the colours required with the solution rendering the paper water resisting. Obviously also several of the substances mentioned, for instance, substances for increasing resistance to water, substances for producing flexibility or suppleness, and colours, can be applied simultaneously.

For impregnating the paper any desired moistening devices can be used, if necessary several combined together. Instead of using a complete impregnating liquid, the process can also be carried out, for example, by putting on the ingredients separately, for instance on one face of the paper the salt solution, and on the other face the formaldehyde solution, or by placing on one face of the paper a concentrated solution mixture, and on the other face a diluting substance, for instance water. In certain cases impregnation with heated solutions or solution-mixtures has been found very advantageous.

It has been found that the three-stage process of the prior process can be greatly simplified, by effecting the impregnation and the drying process practically together —by using an impregnating press in such a manner that the paper is caused to pass through a dipping device, immediately afterwards pressed out and then at once caused to pass over the drying rolls. Also in this method of working, the ingredients of the impregnating liquid can be applied separately, as by first impregnating the paper with hot salt solution, then pressing it out and, immediately before it is passed over the drying rolls, putting on formaldehyde, for instance by causing the paper to pass over rolls moistened with formaldehyde or in some other way, preferably on the paper surface facing the drying roll, which has the advantage that the formaldehyde evaporated by the heating will be driven by diffusion in a uniform manner into the paper web. The working with impregnating presses has been found particularly advantageous in cases in which the rendering of the paper water-resisting was combined with colouring.

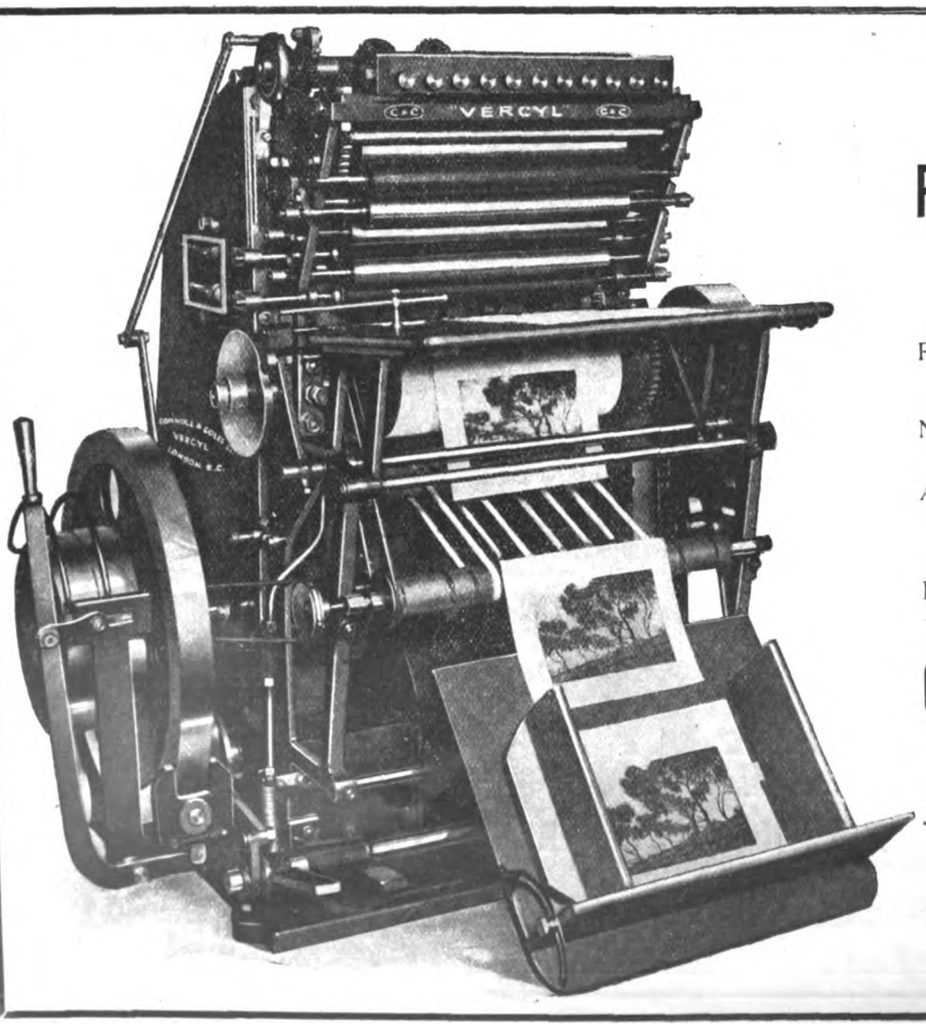
The water-resisting papers manufactured according to the invention, can be still further improved by treating them, in a known manner, with varnish, asphalt, pitch, tar, or the like. Threads, light fabrics and the like can also be embedded in the covering layers thus put on.

By glueing together several paper webs rendered water-resisting, water-resisting cardboard or millboard can be manufactured.

New South African Tariff.

Position of News Print.

H.M. Trade Commissioner at Cape Town has telegraphed to the effect that a new Customs Tariff (with maximum and minimum columns) became operative in the Union on the 9th April. The new tariff comprises 372 items, and the United Kingdom is to enjoy the minimum column rates in respect of the 22 items of the tariff.



News-print from the United Kingdom is given a rebate of the whole duty, which otherwise is 30s. per 2,000 lbs.

A number of stationery items bear increased rates of import duty, there being no rebate in respect of United Kingdom goods. These items and the increased duties are as follows:

Photographic enlargements, Christmas cards, calendars, 35 per cent. *ad valorem*.

Account books, diaries, labels, advertising matter, etc., 40 per cent. *ad valorem*, or 6d. per lb. (whichever is greater).

Envelopes, 30 per cent. *ad valorem*.

THE **EXHIBITION** OF

"If you work with Print, Paper or Card we have the Machine for you."

VICTORIA AND OTHER PRINTING MACHINES

is being held *now* at Norfolk House, Norfolk Street, Strand, London, W.C.2.

It is large, varied and comprehensive, and you will find the Showrooms very welcome after the noise and bustle of the Hall. A 67 Bus will bring you from the Hall to the top of Norfolk Street. Norfolk House is at the bottom of the street, opposite Temple Station (District Railway).

The illustration is that of the Victoria Kobold Automatic Platen Press, which is among the interesting things you will see running at *our* Exhibition.

Should you be contemplating any replacement, alteration or addition to your equipment, we should be glad to have an opportunity to quote for your requirements.

Scottish Paper Trade Notes.

(From Our Edinburgh Correspondent.)

SINCE the beginning of this year there has been no large demand for paper in the Scottish markets, though it is reported that the mills have hitherto been fairly well supplied with orders and prices are steady. The Scottish mills to some extent are protected from competition by the high freights chargeable on all papers coming from the South and the fact that esparto mills at present have rather an advantage in their competition with wood mills. Nevertheless, we find some papers made entirely from wood pulp coming into the market at prices which would not appear to be particularly profitable to the English mills whence they come.

COMPARATIVELY the sale for the cheapest qualities of writings and printin s is much smaller in Scotland than England and a high standard of quality is more general in the North, so it is usually a paper free from mechanical that is offered in this market, and sometimes the quotation is exceptionally and unnecessarily low.

DURING the past few years a number of new paper dealers have started business in Scotland, many of them in quite a small way. With few exceptions they have been making some headway and the enormous profits reaped by the trade a while ago are now reduced considerably, not entirely to the satisfaction of the large wholesale houses, many of whom suffered severely through holding heavy stocks when the market was high. This no doubt partly accounts for the agitation that is going on just now for an understanding between the mills and the wholesale stationers. It would be a pity, in the writer's view, if any arrangements were made by the mills that would make it impossible to start a new business, for a certain amount of competition is always a stimulus to trade. The mere selling of paper is a thing that costs time and money, even when no stocks are kept, and a person starting a new business is always at a disadvantage till he can manage to keep regular stocks. If, however, the mills have regular stock and making prices, the former at a moderate advance over the making price, there would always be a sufficient inducement for an enterprising man to make a start, and the mills would benefit in the long run if they kept a little stock.

Burnley Paper Works.

The Jubilee Year.

The Burnley Paper Works, Calder Vale, Burnley, celebrate their jubilee this year. They were founded in 1875 (through the enterprise of the late Mr. Joshua Rawlinson) in quite a small way; since that time their history has been one of uninterrupted progress, and during the last two years over £50,000 has been spent in extensions and new plant. The present directors of the company are Mr. Samuel Pilling, Mr. O. W. Porritt, Mr. G. M. Porritt, Mr. R. B. Rigby, Mr. J. Hacking (who is also the manager) and Mr. J. R. Allison (who is the secretary).

Covering an area of some 12 acres, the three machines (one 72-in. and two 90-in. wide) produce 200 tons of paper per week. The grades manufactured include rope browns, casings, grocery and glazed paper, and paper bags. Some 240 workpeople are employed.

Meeting Local Needs.

As might be expected in Burnley, the requirements of the cotton trade are specially catered for. Amongst these requirements are cotton tubes, twist casings and glazed backings, these latter being used for packing cotton goods for export to the East. Another speciality is a paper for wrapping up steel goods. An artistically mottled paper, very stiff, is in much demand for photographic mounts. In the manufacture of this particular paper old tarpaulin is used. It is the tarpaulin in the mixture that imparts to the paper its mottled appearance.

A considerable amount of the paper produced is in turn made up into bags, an operation done by machines at a tremendous pace.

Mr. T. H. Cunane.

Mr. Thomas H. Cunane, a prominent personality in the paper trade of this country, has joined the old-established agencies of H. M. Stevenson, Jun., as a partner, and will in future handle the specialities of the following well-known British mills: Inveresk Paper

Mr. T. H. Cunane.

Mill Co., Ltd., Watsons of Bullionfield, Ltd., the New Northfleet Paper Mills, Ltd., and the Textile Paper Tube Co., Ltd.

To his new position Mr. Cunane brings wide experience and practical knowledge, both on the manufacturing and the selling side of the trade. On the practical side he had six years in a paper mill and seventeen years on the road, his experience comprising salesmanship and buying in the North of England and Ireland. He also held the position of shift chemist and superintendent to the Ministry of Munitions at two of their gun cotton mills.

Mr. Cunane gained many technological successes at the Manchester College of Technology and at the Bury Technical Institute. In 1904 he obtained a second class, and in 1905 first-class honours final certificate. In 1914 he took his first-class honours in papermaking again. Mr. Cunane's scholastic successes have not been confined to papermaking, for he has secured first-class certificates in electrical engineering, applied mechanics, steam and steam engines, machine construction, drawing, advanced chemistry (organic and inorganic), and second class certificates in cotton and linen bleaching and dyeing.

As a lecturer on papermaking, Mr. Cunane is in great demand. In 1923 he was invited to join the lecturing staff of the Manchester College of Technology, and the Examination Board in 1924 on paper for printers, stationers, bag makers, box makers, paper merchants, etc. These lectures are of special significance. They denote the effort being made in the direction of education and indicate the closer relations which are growing up between the papermaker, the wholesaler and the paper consumer.

Mr. Cunane takes a broad view in his lectures. The course at Manchester, for instance, which deals with the qualities and behaviour of paper from the aspect of the general printer, is applicable not only to the printer, but to other consumers of paper such as box and bag makers, etc. Indeed his lectures, which have been given from time to time in various parts of the country, were delivered with a view to educating the consumer on the technical and practical details of the use of papers, and represent an earnest endeavour to bridge the gulf between the paper manufacturer or seller of paper and the various users. The lecturer especially discusses all the various troubles and difficulties of both sides, with a view to helping both the makers and users.

His gifts as a lecturer have been appreciated in many parts of the country, his services being requisitioned by various printing and allied trades organisations throughout the North of England and also in Bristol.

Thus Mr. Cunane holds very high qualifications for his new post, his knowledge of the technical side of papermaking being particularly valuable in unravelling various problems which are put before him by paper users and in the solution of which he takes a delight.

Canada Goes Ahead.

News-Print Production Record.

Considerable prominence is being given in the Montreal papers to the fact that in February the Canadian news-print mills for the first time in history surpassed the mills in the United States in volume of production. Production in the Dominion was 115,624 tons; in the United States 113,831 tons—difference in favour of Canada, 1,793 tons. The nearest Canadian mills have come before to their rivals in world production of news-print was in July, 1924, when the U.S. output was 114,859 tons to Canada's 114,133 tons, beating the latter by 726 tons. After that for several months the U.S. was some thousands up over Canada. Comparative yearly records in tons for both countries stand thus:—

	Canada.	United States.
1920 ...	875,170	1,511,968
1921 ...	808,066	1,225,235
1922 ...	1,080,333	1,447,588
1923 ...	1,266,232	1,485,000
1924 ...	1,352,994	1,470,581

In 1920 the difference was 636,000 tons; in 1922 only 367,000 tons; in 1923 219,000 tons, and in 1924, only 118,000 tons.

Messrs. L. S. Dixon and Co., Ltd., 62, Carter-lane, London, have sent out a set of useful samples, comprising writings, printings, cover papers and etching boards. The covers and boards are stocked in attractive tints, while the printing papers are adapted for a variety of purposes, and users are advised to employ appropriate paper for good printing. The modern cream wove writing and the Royal Mail bond are other good lines.

German Pulp and Paper.

Report on Market Conditions.

An interesting report on the cellulose and paper industry of Germany has been forwarded to the Department of Overseas Trade by the Commercial Secretary at Berlin (Mr. F. Thelwell, M.C.).

The Union of German Cellulose Manufacturers has decided that the prices which have been in force since February 1st, 1925, are to continue until May 31st inclusive. These prices are, free station of destination: Seconds unbleached 25.75 mk., 1b unbleached 27.25 mk., 1a unbleached 28.25 mk., 1a bleachable 30.50 mk., seconds bleached 35.25 mk., 1a bleached 36.75 mk.

The business of the cellulose factories continues to be lively and it will undoubtedly be still further assisted by the lock-out of all the workers in the very highly developed Swedish cellulose industry. It is probable that the German paper factories have not any considerable current contracts for Swedish cellulose, as they prefer the German article on account of its quality and it is only worth their while to import it if it is to be worked up (veredelt) and has not to be transported any distance within Germany. The largest German cellulose concern has transformed its original works in South Germany for the production of only the very finest qualities for specialities, and it obtains for these higher prices than those mentioned above, particularly from artificial silk manufacturers.

Higher Paper Prices.

A number of associations of paper manufacturers have increased their prices and have thus departed from the usual practice according to which the paper industry followed the price policy of the cellulose producers. The increases are as follows: For packing paper, envelope paper, imitation parchment, sack paper, spinning paper, by 5 per cent.; for writing paper, free from wood, 3 marks per 100 kg. The prices of the other kinds of paper, in as far as they are subject to conventional arrangements, remain unaltered. This applies particularly to fine paper, copying paper, carbon paper, brown paper, blotting paper. The reasons given for the increase are that higher wages had to be paid and that the prices in any case did not allow a profit to be made. It is true that a number of paper factories did not show a profit during 1924, but nevertheless it is remarkable that the same groups who consider an increase necessary have at the same time introduced export premiums. These premiums are paid to those firms who export the paper which they have purchased from the groups in the form of paper goods and amount to from 5 to 8 per cent. of the inland price. This premium only represents a partial compensation for the difference between the prices charged by the paper users and those of the paper factories who export direct, as the latter have already for a long time had export prices which were lower than the inland prices. This policy gives rise to the impression that the inland prices are fixed somewhat arbitrarily by the manufacturers who rely upon the protection of duties, import prohibitions and cartels, and that only when they have to compete on the world's market do they calculate carefully in order to meet competition.

EXPORTS of printing presses from the United States during last year reached a total value of $4,825,425, an increase of 5 per cent. over the shipments in 1923. The leading customers were the United Kingdom and Canada, each of which took over $1,000,000 worth.

THE Star Paper Mill ordered their new "news" machine from Chas. Walmsley and Co., Ltd., last summer, and at that time decided that it should be operated by a mechanical drive. A further study of the problem, the advantages to be obtained, together with steam economies, have convinced the directors that the gains are such as to justify them in changing from a mechanical drive to an electric multi-motor drive. The latter, it is claimed, gives greater flexibility and more perfect control, which should result in greater output, and the directors of the Star Co. and the Harland Engineering Co., Ltd., have reached this understanding after a most exhaustive and careful examination.

Arresting News-Print Figures.

"The United States is the greatest paper-consuming country in the world," said Mr. R. S. Kellogg, secretary of the News Print Service Bureau, New York. "In 1920 her per capita consumption of paper was 148 lbs., as against 76 lbs. in Great Britain, 45 lbs. in Germany, 33 lbs. in Scandinavia, 12 lbs. in Japan, and 6 lbs. in Russia, and it is still growing.

"About a third of this consumption in the United States," he went on, "is the result of the newspaper-reading habit of the American people. There are now in North America over 22,000 newspapers. More than 2,000 of them are English language dailies in the United States, which have a 22,000,000 Sunday circulation and a 33,000,000 daily circulation. In other words, a daily paper is published for every 3·5 persons in the United States.

"The size of newspapers has increased from year to year, until in 1924 those having circulations in excess of 100,000 copies averaged 28 pages for the daily editions and 103 pages for the Sunday editions. The per capita consumption of news print in the United States jumped from 4 lbs. in 1860 to 50 lbs. in 1924.

"Naturally the production of news-print has kept close pace with the consumption. Last year North America produced 2,900,000 tons of news-print paper. In 1910 the total production of news-print in the United States was 500 tons. On one Sunday in October, 1923, the *New York Times* used 877 tons of paper. In 1848 a new machine at Hamilton, Ohio, made one ton of news print daily. To-day a single machine makes over 100 tons in 24 hours. The Chinese craftsman might make 1,200 sheets daily. Now the labour of one man with modern machinery can turn out the equivalent of 700,000 sheets.

"The news-print paper used in the United States in 1924 would blanket 12,000,000 acres. It would belt the earth three-quarters of a mile wide at the Equator, or make a standard roll 72 ins. wide that would unwind 16,500,000 miles.

THE "ST. GEORGE" MACHINES

(TRADE MARK) (ALL BRITISH MAKE).

For Glueing, Gumming, Pasting, Varnishing, etc.

We Manufacture the Largest Range of Types & Sizes, for all Purposes, for all Trades.

Also :—

Bronzing Machine, Flat Bed and Cylinder.
Rotary Cutting Machines.
Rotary Cutting and Scoring Machines.
Rotary Scoring for hand or power.
Vertical Bending Machine.

Russian Paper Industry.

Developing the Paper Industry—Productive and Financial Programme—Vast Timber and Power Resources—Paper Mills and Production—Cellulose Output—Demand for "News" and Printings—Anticipating Future Consumption—Restoration and Extension of Plants—Reducing Costs — Proposed Capital Expenditure Approved—Leningrad Mill to Make Wrappings.

THE high authority termed the Council of Labour and Defence, under the presidency of M. Kameneff, had under consideration in March a long report by the Supreme Council of National Economy dealing with the productive and financial programme of the paper industry in the present budget year ending September 30th, 1925. In the opinion of the Supreme Council the enormous timber and water power resources of Russia represent such favourable conditions as are rarely met with anywhere else in Europe for the purposes of the pulp and paper industries. They are sufficient to satisfy not only the requirements of the home market, but of a considerable export trade.

IN 1913, the report states, the number of paper mills and allied works within the present boundaries of Soviet Russia was 139. Of these 69 were in operation in 1922-23, 74 in 1923 24, while the number for the current fiscal year is put at 81. In millions of poods, the production of paper amounted to 15·4 in 1913, 3·7 in 1922-23, 6·5 in 1923-24 and the scheduled programme for this year is 9·8 millions of poods. The figures for cellulose are 2·5 millions of poods, 1·3, 2·2 and 3·4 millions of poods in the respective years; and those for wood pulp are 3 millions, 1·2, 2·7 and 2·9 millions of poods.

ANTICIPATING a further growth in the demand for news print and other printing paper, the Supreme Council has prepared a scheme of new construction in the paper industry for the next three years, on the assumption that the consumption of paper at the end of that period will reach the pre-war level of 8 lbs. per head of the population.

SIMULTANEOUSLY with the work of new construction, the Council considers it necessary to proceed with the further restoration and extension of the existing paper mills and undertakings, and for this purpose an expenditure of 5,677,700 roubles will be required for the Central Paper Trust, the Leningrad Trust and the Ukraine Trust, most of the outlay devolving on the first mentioned and applying to the present financial year.

THE execution of these works in 1924-25 will have the result of increasing the output of paper in 1925-26 by 700,000 poods, that of cellulose by 500,000 poods and that of wood pulp by 700,000 poods. At the same time there is anticipated a reduction in the costs of production.

As to the prime costs of manufacturing paper, the report states that the productive plan for 1924-25 provides for a reduction of 12 per cent. in the costs as compared with the average cost of production in 1923-24 in the case of the Central Paper Trust and of 5 per cent. in that of the two other trusts.

THE average sale prices for paper this year are estimated at 7·80 roubles per pood, with an average cost of production of 7 roubles. This compares with 4 roubles per pood in 1913. It is considered that the financial situation of the paper industry is quite stable. The basis capital of the whole of the industry is calculated at the sum of 37,700,000 roubles, with a turnover of 37,811,000 roubles.

THE Council of Labour and Defence, in approving the above report, endorsed the proposed capital expenditure of 56,777,000 roubles this year, and confirmed the appropriation for this purpose of the redemption fund for this year, any deficiency in this respect being provided for from the budget estimates for 1924-25.

IT is reported from Leningrad that the Ropshin paper mill, which has hitherto been at a standstill, will shortly be again set in operation, the mill having been electrically equipped to turn out wrapping paper.

French Pulp and Paper Imports.

The weight of dry pulp imported into France in 1924 was slightly greater than in 1923, but less than the pre-war figures, which seems to indicate that French paper mills have not yet attained the normal production.

Paper imports continue to increase and consist almost exclusively (95·5 per cent.) of paper weighing 30 grammes and over per square metre.

Board imports showed a slight increase in 1924 (69,296 quintaux) over 1923 (61,541). In 1913 they were only 41,005.

In January, 1925, imports of pulp and paper weakened a little compared with the previous month. The imports of resinous wood for paper, in logs, represented 69,270 metric tons valued at 13,754,000 francs.

MR. H. D. HIGHAM, of H. D. Higham and Co., 30-32, Ludgate-hill, London, E.C.4, recently returned from a visit to the Continent, where he was able to secure several important agencies. Among these may be mentioned the sole London representation for the well-known mills of Anciennes Usines Georges de Coninck S. A., Dieghem, Belgium, whose specialities are strawpapers, boards, corrugated papers, etc. Mr. Higham has also secured the representation of a German mill making an imitation cellophane. It is claimed that this product is marketed at a price about one-third below the cost of similar lines on the market used for protective wrapping. An important advantage of this imitation cellophane product is that it is non-inflammable; and although at the moment it can only be obtained in a natural colour, the mill is making investigations with a view to evolving a process whereby the material can be turned out in suitable colours.

Printers' Costing Problems.

IX.—Correcting Some Misconceptions.

In view of the increasing necessity for the adoption of up to date and scientific methods of printing-house management, an expert in the subject of printers' costing is contributing a series of articles to this journal. The present article is the ninth of this series. Questions and discussion are invited.

Several misconceptions of what a costing system is and what it does have already been dealt with in previous articles, particularly those relating to the allocation of expenses and the recovery thereof. Reference has also been made to the improbability of overhead expenses being satisfactorily recovered by means of a percentage on wages, whether on a time or a piecework basis. In one of the articles it was stated that any attempt to recover overhead expenses on a piecework wage was as dangerous as it was simple. Consideration may now be given to some other problems generally met with.

I—The Cost of a Job on an Inappropriate Machine.

Every printer, almost every day, has to work jobs on larger machines than the sheet size. Some hold the opinion that the cost sheet should show the cost as it should be on the appropriate machine. This does not give the actual cost of the job, and any attempt at an adjustment of these figures will falsify the returns. No matter what machine produces the job, the cost is the actual time taken for the various operations, multiplied by the hourly rate of the machine used. The difference between this cost and the price charged may result in a loss being shown on the cost sheet, and the fact is thus made visible in the proper place. It is obvious that a customer cannot be expected to pay this extra cost; he certainly would not if he knew of it. If, however, he is responsible for an increased cost through his request for urgent delivery, then he could reasonably be expected to shoulder the responsibility.

To adjust the rates used on the Value of Production sheet, owing to such circumstances as are referred to in the preceding paragraph, has the effect of lowering the earnings of the department. That is to say, the value of production of each individual unit is not properly returned. The department ought not to be penalised for such circumstances, rather, it should get credit for everything that it produces according to the unit of production used. Therefore, if a quad crown machine is used to produce a demy job (and this is by no means an infrequent occurrence), the department should get the credit for producing at quad crown rates and the actual time of the quad crown at its appropriate rate should be carried forward to the cost sheet. The department thus gets the credit for the work produced and the cost sheet shows the actual method of production. Crediting the department has the effect of proving whether the rates for the various machines have been correctly ascertained. On the other hand, tampering with the rates would make it appear that the rates of the department were not high enough.

II—Charging for Ink.

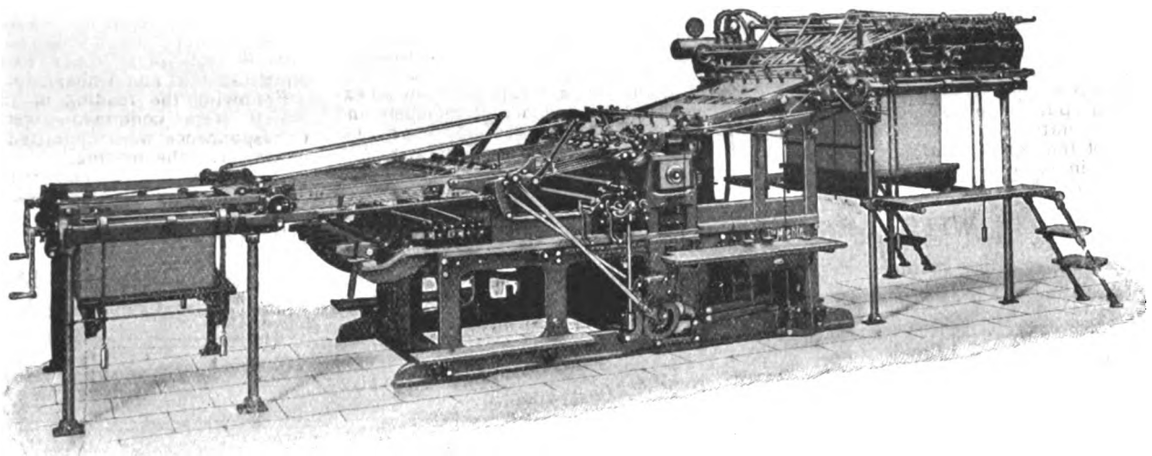
The charging of ink is another matter which seems to give some printers a little trouble. Cases are known where ink is included in the machine rates; that is to say, the price of an average amount of ink for an average hour's run is added to the expenses. In the writer's opinion this is not good costing, because the proportions of time consumed in making-ready and running-on varies with almost every job. For instance, two jobs each of 1,000 runs, approximately an hour's running time, might consume in the one case twice as much time for making-ready as in the other, and, although the running time may be the same, the absorption of ink might in one case be double that of the other. It is suggested that every costing clerk should compile an ink table according to the class of work and the quality of paper used, and that *every* job, no matter how small, should have a definite charge made for ink consumed. It should be remembered that the handling charges are levied not only on paper and binding materials but also on ink, and to the amount debited to the job handling charges should be added.

III—House Corrections in the Composing Room.

In some houses no records are kept of the amount of time spent on house corrections. Where it is possible to secure a return of this time it should be done, as by careful examination of the conditions under which work is produced and its effect on the quality of the work it may be possible to effect a saving in the time on corrections. Some houses run the cost of correcting the output of the Monotype machine as an expense to the Monotype department. Here again the sinking of the cost of corrections in the expenses of a department producing by mechanical means prohibits any effort being made to secure more economical production. It is suggested that hand corrections to any sort of mechanically produced matter should be kept separate and distinct. In the case of the Linotype, corrections must, of course, be done on the machine itself, and this time should be recorded separately. The insertion of the corrected slugs is a hand operation not usually performed by the Lino operator, and this time should also be shown clearly.

IV—Slow versus Fast Machines.

Hourly rates have no relationship to the speed of the machine. They are based on the value of the machine, the area occupied, the cost of power consumed, the incidental repairs and sundries, together with the wages paid and a proportion of the overhead expenses. If a machine is old and slow, although the value of the machine due to age may be less, and in consequence calling for a lower hourly rate, the job naturally takes longer to produce than on a fast-running machine with a higher rate. A modern machine of a much higher value will naturally have an increased hourly rate, but its high speed may result in the job being produced at a lower cost. The length of the run after making-ready has an important bearing on the point now raised. Every printer with a costing system is in the strong position of being able to test the possibilities of a new machine so far as production and hourly rates are concerned, and the advisability of making a purchase is greatly helped by this valuable information.



V—Charging the Full Cost.

There is an idea prevalent in some quarters that the introduction of a costing system of necessity implies that the rates found must be used. A costing system first finds the cost, but experience will decide whether such costs are equitable (a further development of this idea will be illustrated in the next article). It would be foolish for any manufacturer blindly to apply the cost of an operation if that cost were inflated owing to abnormal conditions. To proceed on such lines would mean that the abnormal conditions would be accentuated to an increasing degree. The hourly rates would rise still higher until business became impossible. It is suggested that an equitable rate *may* be found and if that rate is used on the Value of Production statement it would probably result in a loss being shown in the department under abnormal conditions. This loss appearing week by week would act as a spur to the management to set in motion such methods as would bring about a reduction in the cost of operating the department on the one hand and determined efforts to increase the number of orders on the other.

The Miehle

WITH AUTOMATIC PILE FEEDER AND PILE DELIVERY

The Miehle can now be supplied, as here illustrated, complete with the Pile Suction Feeder (with sheet-turning arrangement for perfecting) and Pile Delivery. Full particulars of these additional units will be supplied on application.

An important feature of the Feeder is an arrangement whereby it is unnecessary to disturb the pile of sheets when printing the reverse side. To feed the sheets and turn them over, the pile is put into the Feeder with the leading edge towards the outer feed roll. By this means the sheets are automatically reversed and come down on to the feed board the right way up. Thus there is no re-piling or turning over of sheets by hand, or re-piling or turning of the sheets when working a second or third colour on either side.

It is suction fed, the pumps for creating the vacuum for the suckers and the compressed air for the blowers being of the rotary type, driven by a small independent motor. Each sucker head carries two suction arrangements, two blower arrangements, and two sheet grips. A sucker head is also carried on the control for the height of the pile.

This Feeder, which is carefully designed and well constructed, is provided with safety devices which include multiple-sheet and no-sheet trips. The pile is automatically controlled, so that it is kept always at the right height for feeding.

The Pile Delivery deposits sheets clear of the machine, printed side up or down, on to a board or truck which automatically adjusts itself to the correct level throughout the run. The sheets as they fall on to the Delivery are automatically knocked up and keep the pile even on all sides. A blade is supplied for fitting over the centre of the board or truck for dividing slit sheets. Special provision is made for preventing the sheets from curling on their passage down the delivery tapes. The delivery can quickly be altered from face-up to face-down, or vice versa. Trucks for the removal of the pile can be wheeled in from both sides of the delivery.

The Miehle, the Pile Feeder, and Pile Delivery are manufactured by

VI—Costing a Job on the "En" Basis.

It is customary in many printing works to find the cost of a job comprised of solid matter by calculating the number of ens. Even if the operator is paid on a piecework rate it is not a very accurate basis on which to base the overhead expense. Where work is done on a time basis, all matter should be charged up by the hour. Most of the expenses are on a time basis. Take one item only—the metal in the pot of a composing machine must be kept at a certain temperature. If the operator is slow the output per day will be less than than that of a quick operator, but in each case the consumption of gas would be the same. Rent, rates, lighting and heating are each related to time. If, for the purpose of illustration, it is agreed to take 6,000 ens per hour as the output of an average operator, and a quick operator doubles it, the proportion of each of the expenses referred to above are the same in each case. If, however, the work is measured by a tape instead of by time then the quicker operator's output is charged with only half the expense of that charged against the slower worker, although the consumption is the same in each case.

Trade Union Matters.

L.S.C. UNEMPLOYED.—According to the "*L.T.J.*" the number of members of the London Society of Compositors signing as unemployed during the week ending April 25th was 492, as against 529 in the previous week, 442 for the week ended April 11th, and 362 during the first week of April. The 492 recorded as unemployed during the week ended April 25th compares with 561 in the corresponding week last year, and the much bigger figure of 812 for the similar week of 1923. During March 74,824 hours of overtime were worked by 6,193 men in the general trade, whilst in the news section 10,914 hours of overtime were worked by 1,112 men.

LEEDS TYPOGRAPHICAL SOCIETY REPORT.—The quarterly report of the Leeds branch of the Typographical Association states that during the first three months of the year the condition of employment in the trade continued fairly good, although there was a slight falling off as compared with the previous quarter. The number of members signing the unemployment book varied from a maximum of 34 to a minimum of six, with an average over the full period of 24, and out-of-work payments showed a total increase of £110, amounting to £401, as against £291 in the previous report.

OVERTIME POINT AT COLCHESTER.—The secretary of the Colchester branch of the Typographical Association has asked the Executive Council if a charge-hand was within the rules in exceeding the stipulated number of hours in a fortnight. This member had been placed in charge of a night shift, and he commenced work three hours before the staff and remained three hours after they had finished each day. The Executive Council have informed the branch that the member must conform to the overtime rules.

T.A. BALLOT RESULTS.—The secretary of the Typographical Association announces that the proposal that 9d. be paid for tea money when notice is given after the usual mid-day meal-time that a member is required to work overtime the same evening for not less than one hour after the usual time of closing has been carried by 11,367 against 1,188. The proposal that a member required to work through recognised meal hours shall be entitled to overtime pay at the rate of time and a-half for such meal-time or lesser portion as he may be required to work has been accepted by 11,612 against 959.

EMPLOYMENT EXCHANGE AND STANDARD WAGES.—The Executive Council of the Typographical Association have received from the Bedford branch a recommendation that a member be expelled for accepting a situation at less than the branch minimum rate. The member had been sent to the situation by the local Employment Exchange. The Executive Council have agreed to the recommendation for expulsion, and also advise the branch to protest to the Employment Exchange for sending a member to a situation at less than the recognised rate of wages.

HALF-A-DOZEN of the Mulready envelopes, which did duty before the days of stamps, have been found at Guisborough, Yorks.

Printers' Managers and Overseers (PARENT) ASSOCIATION.

Preparations for the United Gathering.

The business of the next biennial delegate meeting—which is to be held in connection with the Printing Exhibition at the Agricultural Hall—occupied much thought at the May meeting of this Association, held at the "Old Bell," Holborn, on Tuesday of last week. The important agenda for that occasion was down for discussion, and this fact drew an exceptionally full attendance of members and provided an animated and interesting discussion. The president, Mr. R. H. Berry, was in the chair and was supported by the vice-president, general secretary and other officers.

Mr. Arthur W. Paul, present for the first time after illness, received a cordial welcome from the president and the meeting.

Two candidates for membership, both overseas applicants, were elected into the Association, viz.: Mr. D. G. Allen (the North-Western Railway, Moghalpura (Lahore), India—superintendent, Letterpress Department); Mr. R. G. Randall (Government Press, Ministry of Finance, Cairo—overseer, composing).

Liverpool Coming-of-Age.

The general secretary, who paid a high tribute to the good work done by the Liverpool Centre in the interests of the Association, formally moved, on behalf of the Council, that the president, vice-president, general secretary and financial secretary, attend the Liverpool Coming-of-Age Celebration, on May 9th, to represent the Parent Association. This was seconded and carried unanimously.

The meeting also gave its approval to a recommendation of the Council that miniature presidential badges be presented to the past presidents of the Association. They will also be supplied to Provincial Centres if desired. The miniatures are to be handsome gold decorations, providing tangible recognition of outstanding service.

The Delegate Meeting.

The delegate meeting agenda was next entered upon, and some of the most important points were discussed with a view to enabling the London delegates to know the views of members upon the various matters to be dealt with. The subjects included the Association's death benefit fund and also the important question of the possible inauguration of a superannuation scheme.

The agenda having been disposed of, the next business was to elect two delegates to attend on behalf of London. There were four nominations, and accordingly tellers were appointed, and voting proceeded by show of hands. The result was that Messrs. A. H. Wilson (vice-president) and A. E. Jarvis were elected.

The Printing Exhibition.

Before the meeting concluded, the president had a few words to say to members on the subject of propaganda on behalf of the Association, and Mr. S. A. Dawson raised the subject of the Association's stand at the forthcoming Printing Exhibition. Arrangements are being made for attendance at the stand to be continuous, and members were invited to come with their friends to the stand and make use of the facilities it will offer as a rendezvous for those visiting the Exhibition.

Printer Makes Good.

Thirty-four creditors of Mr. Ernest Senior, head of Messrs. E. Senior and Sons, printers, of Denton, received at Manchester on Wednesday of last week full settlement of their claims, which totalled £1,446 15s. 2d.

Mr. Senior became bankrupt 28 years ago through having to fulfil a bond as surety for another undertaking. He was discharged shortly afterwards, but stated that he would never rest until his debts had been paid. To make this possible he limited his living expenses for many years to £1 a week.

At the meeting last week letters of appreciation were read, and those present decided to present Mr. Senior with an illuminated address or other form of acknowledgment.

Printing, Bookbinding and Kindred TRADES OVERSEERS' ASSOCIATION.

There was a large muster of members at the April meeting of the Association, held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4, the chair being occupied by Mr. J. Fleming (president), supported by Mr. A. G. Aves (vice-president). At the conclusion of routine business Mr. L. C. Mennell (letterpress machine instructor, London School of Printing) delighted the members with an address entitled "James Russell Lowell, American Poet and Ambassador."

Following the reading of the minutes—which were confirmed—several items of correspondence were submitted for the consideration of the meeting.

One of the letters had reference to the Association's visit to John Dickinson's mill at Croxley, and Mr. W. F. Cribb said this function had been fixed to take place on June 13th.

Another letter was received from Mr. George Knight, secretary of the Bookbinders' Cottage Homes and Pension Society, in which he expressed his thanks to the Association for their annual donation.

Correspondence was also submitted from Mr. A. E. Goodwin (secretary of the Federation of Master Printers) with reference to the question of the status of their members. The letter stated that the matter would be brought before the Labour Committee at the earliest possible moment after the annual meeting of the Federation. Some discussion ensued.

The meeting next proceeded to the election of the following candidates to membership: Mr. A. J. Cannon (honorary member), representative of Messrs. C. S. Rolls, Ltd.; Mr. W. T. Hill (overseer litho department), Messrs. J. Parry and Co., Ltd.

The candidates being unanimously elected, the president, on behalf of the Association, extended to them a very cordial welcome.

A hearty reception was also tendered to Mr. W. Elliot, who was elected as an honorary member at the April meeting of the Association, but who was not present on that occasion.

The balance-sheet of the annual dinner was then submitted by Mr. W. F. Cribb, who stated that the total receipts amounted to £108 9s. 6d. and expenses £105 11s. 8d., a balance to the good being shown of £2 17s. 10d.

The chairman expressed the thanks of the Association for the excellent work done by the stewards in making this annual function such a success, with a reference to the specially arduous character of the work performed by Mr. Cribb.

Mr. Fleming then referred to the visit of the Association to the Printing Exhibition on Saturday, stating that after tea arrangements were being made for accommodating the members for an entertainment to take place in the evening.

In view of the coming-of-age of the Association, which is due to be celebrated this year, the president announced that the executive had appointed a sub-committee consisting of Messrs. Smith, Walters and Jones to find out the best way of marking the occasion. Whatever form the celebration took, he thought it the duty of every member to give this important epoch in their history his whole sympathy and support.

The Lecture.

Mr. Mennell was then called upon for his lecture. He dealt in an interesting way with the poet's early life and work, and then drew attention to James Russell Lowell's abhorrence of slavery. So strong was his opposition to the slave traffic that he was often accused of being a traitor to his country. Mr. Mennell, in dealing with the Biglow Papers, thought this work represented a combination of Dickens and Thackeray. The speaker next took his hearers to the poet's stay in Spain as the American Ambassador to that country, and then referred to his transference to London in 1880, where he met with a very warm welcome. Throughout the lecture Mr. Mennell revealed himself an enthusiastic admirer of the poet and the possessor of an intimate knowledge not only of his works, but of the outstanding characteristics of the celebrated writer's life. From first to last the lecture was listened to with a great deal of interest and appreciation.

At the conclusion of the lecture the thanks of the gathering were tendered to Mr. Mennell in an appropriate manner by the chairman and Mr. A. W. Hunt.

The Federation of Master Printers.

Silver Anniversary at Buxton.

"Your movements have been provided for almost minute by minute," said Mr. John D. Ruddock, president of the Midland Master Printers' Alliance, in welcoming the company of 600 master printers and ladies to Buxton for the 25th annual meeting and 13th Cost Congress of the Federation of Master Printers. His remarks were certainly true from the moment the visitors were cinematographed on their arrival at Buxton station on Saturday until their departure this week. In the meantime good business was done at the annual meeting and Cost Congress; acquaintances were made and renewed, and pleasant excursions were enjoyed among the delightful hills and dales of Derbyshire.

The Reception.

On Saturday evening the visitors were received at the Palace Hotel by Mr. and Mrs. John D. Ruddock and by Mr. W. B. Wykes (president of the Federation) and Mrs. Gerald D. Wykes. An excellent concert was provided and there was dancing until midnight. In the course of the evening there was an official welcome on behalf of the Alliance when Mr. Ruddock acknowledged the assistance of the Lancashire and Cheshire Alliance, which claims Buxton for administrative purposes, although its geographical area is the Midlands. He urged them to remember when they returned to their own towns to endeavour to do something to help the organisation, for "anything done to help the whole trade will have a boomerang effect and benefit the doer."

Mr. W. B. Wykes—who hails from Leicester—supported Mr. Ruddock as a Midlander and also extended a welcome as president of the Federation, and announced that "The Anncient Bathes of Buckstones" would be open at a specially early hour on the following morning.

Church Parade.

The "official" service on Sunday morning was at the Buxton Parish Church, where an eloquent sermon was preached by the Rev. Canon C. E. Scott-Moncrieff, M.A., D.D. Caxton, he thought, was most concerned with the *convenience* resulting from the discovery of printing, but a very gracious and noble figure was brought into connection with the art through Caxton's successor, who was printer to the Lady Margaret, Mother of King Henry VII, who was more concerned with the advancement of learning and especially of sacred learning. Printing had done much good, but it had also done some harm. The Victorian era, with its unparalleled material progress resulting from the introduction of the steam engine had not much right to boast of its superiority to the unparalleled intellectual progress of the spacious days of Queen Elizabeth resulting from the introduction of printing. But what of spiritual progress? St. Christopher had wished to serve the most powerful master and he had served the Devil for a time until he found One who was the most powerful of all. The printing press had been a mighty servant and had served many masters, and there had been times when it, too, had served the Devil, but if the time came when it would be enabled to cast off all other services and serve Christ alone, that would be the most glorious thing in all its history.

In the afternoon a large gathering took place in the grounds of the headquarter's hotel, and in the evening a special concert was arranged.

Cost Congress.

The 13th Cost Congress took place in the Town Hall on Monday, Mr. W. Howard Hazell, chairman of the Federation Costing Committee, presiding.

The president of the Federation (Councillor W. B. Wykes) extended a welcome to the members, and there was much applause when he expressed the appreciation of the Federation for the work of Mr. Hazell.

The chairman, in his opening remarks, dealt exclusively with the important subject of paper standardisation. He was able to report that after four years of negotiation with the paper merchants and papermakers agreement on standards had been reached which only needed ratification by the main bodies. The paper merchants had been impressed with the fact that 1,000 master printers had signed the form sent out by the Federation in favour of standardisation, and if printers would insist on ordering paper on the new basis it would not be long before every papermaker would be compelled to come into line. The proposed basis was 1,000 sheets of paper, which would be packed in 500's, 250's, 100's or 50's. This would facilitate estimating in two ways—the variation of the number of sheets to a ream from 472 to 516 would be eliminated and decimal calculation would be simple, even to the extent of a single sheet. The argument that uniform reams of 500 would involve increased breaking of reams was a failacy, because it had been found that with present overs of 4, 8, 12 and 16 sheets, breakage was necessary in nine out of every ten jobs. The scheme would permit of allowances for overs being made on specified percentages for different classes of work. An effort was also being made to standardise sizes, and a tentative agreement had been reached with the papermakers, by which, *e.g.*, foolscap would always denote a sheet 13½ ins. by 16½ ins. This would not preclude other sizes being ordered or stocked, but they would be described by their measurement in inches, and the conventional names would be reserved for the exact sizes agreed upon. It was also recommended that boards should not be sold per gross, but per hundred boards.

Mr. Hazell then proposed the following resolution, which was seconded by Mr. W. J. Pollock, and after several useful criticisms and suggestions had been made by the meeting, the resolution was carried unanimously: "That this meeting approves the scheme for the standardisation of paper and believes its adoption would be of great benefit to the printing industry. It requests the Costing Committee to make such minor modifications in the scheme as they may think desirable and fix a date when paper shall be dealt with in accordance with the scheme."

Works Organisation.

The subject of "Works Organisation as a Means of Cost Reduction" was dealt with by one who is undoubtedly an authority on the subject—Mr. Geo. Eaton Hart (London). Organisation, he said, was merely orderliness—the first law of nature. Although he stated he had no formula for cost reduction, the requirements he laid down and enlarged upon could scarcely fail to be effective—minute attention to detail; intelligent observation with technical experience; enterprise in new methods and machinery; with the Federation Costing System as the sheet anchor. English printers needed to emulate America in closer oversight and superintendence. Each department needed to be critically examined. For the average printer who had little time for such work, graphs and charts and the weekly balance sheet which the Costing System provided were most valuable in enabling him to discover where attention was necessary.

Mr. Hart dealt illuminatingly with the subject of mechanical composition. Although composing machines had been in full use ten years ago, during the period that had since elapsed there had been such an advance as entirely to revolutionise the conditions of the compositor's art. The Monotype to a limited extent and the slug machines to a much larger extent were gradually eliminating the use of movable types, and the composing-room was more and more being used as a lay-out department and assembly for the make-up of mechanically set matter, necessitating the use of specially constructed frames, surfaces and racks. The "practical lay-out" department was becoming a new feature of the composing room and needed development. Serious wastage of type was caused by long runs and by the continual heating and pressure of modern stereotyping processes, the only remedies for which were either cold moulding or the offset process.

Mr. Hart also touched upon a variety of smaller but essential points that successful organisation demands—methods of dealing with orders, estimates, paper and ink stock records, charging, storing, the use of pneumatic tubes—especially to the reading department—small lifts, telephones and dictaphones, and the imperative necessity for weekly meetings of departmental managers. His last words were: "Costing is the handmaid of organisation," and "The man at the top is to blame always, as blame is where authority is."

Better Estimating.

The Congress had not forgotten the brilliant paper read by Mr. W. H. Sessions two years ago on the subject of "Estimate Variation," and they had therefore awaited expectantly his address on "Means to be adopted to secure Better Estimating." They were not disappointed for no man is better able to keep his audience in pleasant mood while he drives home hard truths and to send the patient into convulsive laughter, even while the knife is being withdrawn. The first step to secure better estimating, he said, was to stamp out the heresy that an order taken at a loss was somehow of benefit. Although a cursory examination of fixed costs, costs mainly fixed, and running costs might support the heresy, it could be shown that even under the most favourable conditions wrong estimates did not pay. It was better to increase 12 per cent. without lowering prices than to increase 200 per cent. by reducing prices 10 per cent. To explode the heresy would stamp out three of the four four forms of faulty estimates he mentioned—the deliberate faulty estimate, the suspected-but-winked at faulty estimate, and the more numerous hope-it's-right-but-lose-on-most-estimates wouldn't-get-em-if-we-didn't faulty estimate.

Then there was the faulty estimate not caused by policy but by real error. Were they helping the estimator to be accurate? Was the estimating department properly equipped? Records of actual times taken in the works, if they were properly used and accuracy was assured, saved both time and money. Co-operative effort by the Federation had done much and could do still more in the same direction. Forms and checks and adding machines were also of great importance. Mr. Sessions also had much of value to say on the importance of considering the mental equipment and the technical knowledge of the estimating clerk, and on the paramount necessity of the estimating department keeping in touch with both the selling and the producing departments.

Mr. R. B. Simnett (London) opened the discussion, urging that jobbing printers should endeavour to eliminate the estimating department, and substitute for the consideration of price, the consideration of quality.

Mr. A. le Pine Strange (Eastbourne) spoke of the book that the Home Counties Alliance would shortly issue giving specimens of jobs, and the records of actual times taken on the various operations.

The discussion was further sustained by Major Hamish MacLehose (Glasgow), Mr. W. Edwards (Widnes), Mr. H. H. Potts (St. Leonards) and Mr. G. F. Storey (Leeds).

A vote of thanks to the speakers was proposed by Lieut.Col. H. Rivers Fletcher, and seconded by Mr. J. C. M. Eason (Dublin).

Two sectional costing meetings were also held concurrently with the main congress—one on the subject of a binders' price list, and the other on the subject of lithography.

At the former, Mr. H. R. Danford (London) presided. The meeting had under consideration a tentative schedule of average operational times for binders' processes, together with the quantities and costs of the materials used in different classes of bookbinding. A useful interchange of opinion took place between the representatives from London, the Provinces and Scotland, and it was found that different terms were used for the same operation in those three areas. Discussion took place on such questions as the relation between the "skin foot" and the square foot in relation to leather, and a cordial invitation was given by the representatives from London, where a guide price list is already in operation, for continued discussions with the Provincial binders with a view to a greater measure of uniformity being secured.

Mr. A. Williamson (secretary, Federation Costing Committee), opened the discussion at the sectional conference on "Costing as Applied to Lithography." He said there was an impression abroad that the Federation Costing System could not be as well applied to the litho section as to the letterpress, but the principles had been equally successfully

Digitized by Google

applied in many litho businesses. Another erroneous impression was that the System was brought to a firm, and the business was squeezed into the System: the exact reverse was the case, and the System was made to fit the business. He contended that departmentalisation was essential in a litho business as in a letterpress business. . . . Several illustrations were given of the success that had attended the installation of the System. In several instances it had shown the necessity for the entire overhauling of the departments; and in one or two instances general printers who had had a litho department had gone to the length of cutting out that section as it had been found not to be a paying proposition, the result being that lithographers proper were now doing the work formerly done by the letterpress firm on a non-paying basis. Methods of dealing with sketches, and the cost of polishing stones and storing originals were explained, and much discussion on the points mentioned developed.

Following the Cost Congress, the whole company was entertained at lunch in the Pavilion by the Midland Alliance, Mr. J. D. Ruddock, president of the Alliance, presiding. Mr. W. Howard Hazell, vice-president and president-elect of the Federation, proposed the toast of "The Midland Alliance," in the course of which he felicitously used each letter of Mr. Wykes's names to represent his qualities, and cleverly introduced the names of Midland stalwarts who were bearing the brunt of the entertaining in a kindly reference to Mr. Ruddock. Mr. Ruddock and Mr. H. G. Clarke (immediate past president of the Alliance) replied, and both paid a tribute to "the man in the stoke hold," Mr. D. R. King, the secretary of the Alliance.

In the afternoon a fleet of charabancs conveyed the company over the hills and dales to Hassop Hall, where they were entertained in the grounds by Colonel H. K. Stephenson, D.S.O., D.L., J.P. (of Messrs Stephenson, Blake and Co., Ltd.). The guests were received by Colonel and Mrs. Stephenson, Miss Stephenson and Mrs. Robert Blake, and after tea had been served a pleasant hour was spent in touring the grounds and terrace gardens and strolling through the old caves. Mr. W. B. Wykes found an opportunity to express the appreciation of the visitors, and he recalled a former visit to Colonel Stephenson, when the Federation held its annual meeting in Sheffield in 1914. Colonel Stephenson said that in receiving the party it had been a pleasure to hear announced the names of many printers which had been household words with him for many years, and he only regretted he had not known their faces as well as he had known their names.

In the evening a civic reception took place in the Palace Hotel, when the visitors were received by Alderman C. W. Buckley, Mayor of Buxton, and the Lady Mayoress.

Mr. Wykes, in replying to the Mayor's welcome, said the printing industry was the fifth or sixth largest industry in the country, but because it was not concentrated in a few centres like other big industries, but scattered in every town, it did not always receive the recognition it deserved by reason of its size.

An excellent programme of music was provided by the hosts, and dancing again continued until midnight.

Annual Meeting.

The twenty-fifth annual meeting of the Federation of Master Printers was held in the Town Hall, Buxton, on Tuesday, May 12th, the president, Councillor W. B. Wykes, presiding.

The president proposed the adoption of the annual report of the Council. This report referred to the good conditions established in the printing trade which encouraged the belief that, while the process of readjustment in certain low-paid industries might have a reflex action on other trades, the printing industry would not in the near future be faced with labour problems of the first magnitude. Reference was made to the onerous work of the Labour Committee under the chairmanship of Lieut.-Col. H. Rivers Fletcher, and to the satisfactory settlement recently reached in the bookbinding industry as a result of the intervention of the Joint Industrial Council. The headquarters and Alliance staffs had been able to render many important services to individual members, and there had been increased requests for information on technical, legal and commercial matters. The interests of members in connection with the proposed changes in the rating of machinery and other legislative matters were being watched. In regard to costing, 2,104 visits had been made, the question of better estimating was being kept well to the front, disputes between printers and customers had been amicably settled by estimates prepared by the costing department, printing schedules had been revised for several public authorities, and important modifications in "Conditions of Contract" issued by many local authorities had been secured. There were indications that the Collective Advertising scheme would be highly successful and remunerative to participating members, and the Joint Industrial Council had been established as an integral and indissoluble part of the printing industry.

The accounts and balance sheet were presented and were adopted on the proposal of Mr. Edward Unwin, treasurer of the Federation.

The subscription for the year ending March 31st, 1925, was fixed on the same basis as the preceding year.

Mr. Wykes proposed as his successor in the presidency, Mr. W. Howard Hazell, and the resolution was carried with complete unanimity and amid many evidences of the popularity of the selection. On the occasion of its silver anniversary, the Federation elected to fill its highest position the son of its first president, Mr. Walter Hazell, who occupied the position in 1901.

Mr. J. A. Stembridge (Leeds) was elected vice-president.

Mr. Edward Unwin, Sen., was re-elected treasurer; and the retiring president, Mr. W. B. Wykes, accepted the expressed desire of the meeting to revert to his former position of assistant treasurer.

Messrs. Roberts, Wright and Co., were re-elected auditors.

A report of the Collective Advertising Scheme that has been a feature of the work of the past year, was given. The first stage of the scheme will shortly be completed when a third piece of advertising printing will be sent to the lists of customers forwarded to headquarters by the members who are participating.

A most useful and interesting discussion, opened by Mr. Wykes, took place upon "Apprenticeship Problems," and Colonel H. Rivers Fletcher (chairman of the Labour Committee) made a statement on the Labour situation.

Votes of thanks to the retiring officers and committees and the organising committee of the Midland Alliance were proposed and heartily endorsed by the meeting.

FRENCH PAPER STOCK CO., LTD. (in voluntary liquidation).—Messrs Wm. McLintock and E. Lloyd Price, joint liquidators, report having examined the position of the company as at July 19th, 1922, when the debenture for £15,000 was granted in favour of Messrs. Becker and Co., Ltd. The debenture has been found to be quite in order. In the meantime a receiver had been appointed by the debenture holders of Becker and Co, Ltd., and subsequently that company went into liquidation. The receiver for the debenture holders of the French Paperstock Co. (Mr. Leonard G. Lane) stated that the assets of the company, after payment of preferential claims, realised the sum of £6,340 19s. 6d., which under instructions he had paid into Court. As the debenture was for a sum of £15,000 there are therefore no assets available for distribution amongst the unsecured creditors. The joint liquidators regret that there will be no dividend on the claims of the creditors in the liquidation and there appears "no alternative but to bring this unfortunate liquidation to a close."

GREASEPROOF AND ITS USES.—We have received from the Union Paper Agency, Ltd., 12-13, Upper Thames street, London, E.C 4, some excellent samples of "Monopol" greaseproof. This grade is unbleached, unglazed, and, as it embraces several important features, it is well adapted for many purposes, particularly in the field of food packing. Manufacturers would do well to explore the various avenues that are now opening up in this direction on hygienic grounds. Although we are considerably behind the Americans in the use of paper wrappings for articles of staple food, headway is slowly but surely being made in this country for covering such commodities as bread, meat, fish, etc., thus avoiding damage and also the possibility of contamination. Referring to the samples of greaseproof before us, manufactured by the Union Co., successful experiments have secured an extraordinary white colour, resembling in appearance bleached greaseproof, thus adding attractiveness as a packing medium. It may be mentioned that the greaseproof qualities of the paper are in no way impaired by the exceptional colour attained.

Trade Developments.

SPECIAL OFFERS TO PRINTERS.—From the well-known firm of printers' suppliers, Messrs. John Haddon and Co., of Salisbury square, Fleet-street, E.C.4, we learn that at the forthcoming Printing and Stationery Trades Exhibition Haddon goods will not be on view. Instead of spending money on a stand Messrs. Haddon are prepared to give their customers the benefits of any funds thus saved by selling many of the bread-and-butter lines in everyday use by every printer at specially low prices for the period of the Exhibition. We are assured that reductions in price which are offered are real concessions, and printers (especially those in a small way of business) would do well to pay a visit to the well-known house in Salisbury-square. Further, Messrs. Haddon are prepared to refund third-class return railway fare to all principals coming from a distance not exceeding 250 miles (or single fare from 250–500 miles) who favour them with a call and purchase types, brass rule or spacing materials to the gross value of £20. And to those interested in up-to-date letterpress plant and machinery such a visit can be most profitable, for facilities are being arranged to show an "Optimus" Two-revolution Press with extension pile delivery, a Babcock Standard Drum Cylinder Press, British Victoria and Caxton Art Platens, a Haddon Semi-Automatic Safety Platen, a Caxton Rotary Perforator, a Caxtonette Platen, besides a multitude of smaller machines and composing-room fitments.

"AUTO-PHŒNIX" WITH FEEDER.—A machine which is very much talked about just now is the "Auto-Phœnix." This is a fine two-revolution machine having a perfectly reliable feeder built with it as one unit. The great success achieved by these presses make them a tremendous acquisition to the up-to-date office. Demands for increased production with best quality are amply filled by the "Auto-Phœnix," and it is claimed that by their use remarkable economies are effected. Those interested are recommended to communicate with Messrs. John and Wm. Burt and Sons, Ltd., 3, Rosebery-avenue, E.C.1, who will be happy to arrange demonstrations.

MESSRS. MILLINGTONS' "Express Envelope Service" should prove a boon to the busy printer, especially for rush work for sizes and qualities which he is not in the habit of stocking. The selection of stock envelopes is so large in extent and so varied in qualities that it would be difficult not to find exactly what one is looking for. We understand that Messrs. Millingtons' are despatching from stock daily 98 per cent. of the orders received for stock goods, a marvel of efficiency when one considers the thousand and one drawbacks incidental to the average manufacturing business, and such a high percentage can only result from a thoroughly sound and scientific organisation.

THE Inveresk Paper Co. (Ltd.) are about to erect a three-storey building of steel and brick, measuring 60 ft. by 50 ft., to be used for papermaking processes and storage. The plans were approved and passed at a meeting of Musselburgh Dean of Guild Court.

UNDER the title of "April Showers," Spicers Ltd., recently sent out a very varied set of samples of papers, boards and envelopes These include every sort of paper and stationery, including surface-coloured papers, tinted printings and covers, S.C. and M.F. printings, white and grey arts, drawing cartridge, cream wove banks and bonds, pure cream laid writings, unglazed kraft, envelopes in every variety, boards of great utility, advertising blotting slips and kraft fruit bags. Spicers, Ltd., are preparing a reference book containing samples of their leading lines, and this useful index, which indicates the extent of the stock held, will be sent on application.

PAPER and printing imports into Turkey during May were of the value of £T354,330, and in June £T312,724. Exports therefrom under the same heading reached £T217,724 in May and £T219,241 in June. During the six months ended June paper and printing imports from Turkey represented a value of £T1,926,323, whilst the exports for the half-year reached £T2,026,128.

The Printing Exhibition.

Royal Opening on Saturday.

This week is to see the opening of the Seventh International Printing, Stationery and Allied Trades Exhibition, the inaugural ceremony being arranged for next Saturday morning, when H.R.H. Prince Henry is to declare the Exhibition open.

His Royal Highness is to arrive at the Exhibition at 11.30 a.m., and the co-operation of all exhibitors is being invited by the management in order to ensure the success of the function. All exhibits, it is stated, must be absolutely complete, and stands in good order and gangways cleared, not later than 10.30 a.m., and no hammering or noise of any kind must be heard after 11.15 a.m. The Prince will make a rapid tour of the Exhibition, proceeding to the dais for the official opening at 12.40 p.m. At 12.30 p.m. all machinery must be stopped until 1 p.m., by which time the opening ceremony will be completed.

Mr. F. W. Bridges,

Organising Manager of the Exhibition.

Only those invited to the opening ceremony and luncheon will be admitted to the enclosure.

Official Visits.

It may be of service to set forth here the various official visits to the Exhibition which have been arranged as follows:—

Saturday, May 16th.—Printing, Bookbinding and Kindred Trades Overseers' Association.

Monday, May 18th.—The Worshipful Company of Stationers.

Tuesday, May 19th.—The British Photographic Manufacturers' Association.
The Periodical Trade Press.

Wednesday, May 20th.—The Joint Industrial Council Convention.
The Federation of Master Process Engravers.
The Master Bookbinders' Association.

Thursday, May 21st.—The Federation of Master Printers.
Master Bookbinders' Association.

Friday, May 22nd.—The Newspaper Proprietors' Association.
The United Kingdom Paper Bag Association.

Saturday, May 23rd.—The Printers' Managers and Overseers' Association.

Monday, May 25th.—The Kent Newspaper Proprietors' Association.
The Electrotypers and Stereotypers' Managers' and Overseers Association, 3.30.
The Caxton Convalescent Home Concert, 7 p.m.

Tuesday, May 26th.—The Stationers' Association of the United Kingdom.
The United Bill Posters' Association.

Wednesday, May 27th.—The London Master Printers' Association.

Thursday, May 28th.—The Printers' Pension Corporation Day.
The Publicity Club.

Friday, May 29th.—

Saturday, May 30th.—The Jobbing Guild's Reunion.

The Printing, Bookbinding and Kindred Trades Overseers' Association, whose visit will take place on the opening day, will be the guests of the Exhibition authorities to tea at about four o'clock. In the evening, it is hoped, a room may be available where further entertainment and social intercourse may be indulged in.

The following Saturday, May 23rd, is to see the official visit of the Printers' Managers and Overseers' Association, and the occasion is to be utilised for the holding of the biennial delegate meeting of the Association and other functions, in accordance with the following programme:—

9.30 o'clock. Delegate meeting at Agricultural Hall. (Ladies accompanying delegates will assemble at National Hotel for motor drive round London's shopping centre.)
10 o'clock. Visit to the International Printing Exhibition.
1 o'clock. Luncheon in the Barford Saloon, Agricultural Hall.
5.30 o'clock. High tea in the Prince's Gallery (by invitation of Mr. F. W. Bridges).
7 o'clock. Bohemian concert in the Prince's Gallery.

We understand that the directors of Newnes and Pearson, Ltd., have invited the members of their staffs to attend the Exhibition on Saturday next as the guests of the firm. Tea will be served at about five o'clock, and a large company is expected to accept the invitation.

Printing Trade Scholarship Scheme.

Arrangements have now been completed whereby firms, organisations, or combined interests in any section of the printing industry may institute a scholarship or scholarships and put forward their nominees for examinations and approval of the Advisory Council of the London School of Printing and Kindred Trades. The general conditions governing these scholarships are as under:—

Applicants must be of British nationality.

No candidate shall be accepted unless he is qualified to benefit by such a course; his educational standard, technical training, and workshop experience must be such as will enable him to take the fullest advantage of a commercial as well as a technical course of instruction.

The competitions shall be adjudicated by a committee representing the various bodies identified with the branch of the industry for which the scholarship is instituted, the Principal of the London School of Printing, and the firms or organisations responsible for founding the scholarships.

The scholarships shall be open for competition to those who have been apprenticed to some section of the printing industry.

The scholarships shall be tenable at the London School of Printing and Kindred Trades for not less than one session's whole-time instruction in the various sections of the printing industry represented within the School, preferably during the last year of apprenticeship or the twelve months following.

The firm or nominating body or bodies shall be responsible for the candidate's maintenance and fees, and the course will include instruction in those subjects which are directly identified with administration, *i.e.*, technical, commercial and general industrial knowledge.

In certain cases the scholarship may be supplemented by a travelling working bursary to enable a candidate to gain knowledge of methods of production in other lands.

The candidate shall be expected to attend supplementary classes at the School of Economics for the purpose of obtaining a knowledge of the latest business methods appertaining to commerce and industry.

Periodical reports shall be made on the candidates' progress to the Advisory Council, the firm, or other nominating bodies.

At the end of the course of instruction the candidate will be expected to sit for an examination, on the results of which a diploma may be awarded.

Dates of competitions will be advised in the trade press and further particulars may be obtained from the Principal of the London School of Printing, 61, Stamford street, S.E.1.

THE LONG ACRE PRESS, LTD., has been formed with a nominal capital of £100,000, to print and publish *The People* newspaper.

East London Master Printers.

Year's Work Reviewed.

In reviewing the work that has been attempted in the twelve months ended March 31st, the annual report of the Association of Master Printers of East and North-East London indicates much success achieved and states that the feeling of friendliness of members towards each other has been developed to such a degree amongst those members who have made a point of attending the monthly meetings of the Association, that the old spirit of competitive antagonism has entirely disappeared. While there is yet a great deal to be done in the matter of regularising prices for work, there is no doubt that sooner or later the adoption of the Costing System will become general.

Amongst activities of the year, mention is made of the lecture by Mr. W. H. Northam, O.B.E., who outlined in detail the objects and proposals of the Federation Collective Advertising Scheme, as a result of which lecture the Association agreed to support the scheme; other lectures or addresses mentioned in the report include that of Mr. J. Crowlesmith, J.P., on "Salesmanship"; that of Mr. G. F. Tomkin on "Profit Leakages"; those by Mr. Frank Colebrook and Mr. Hopton Hadley (vice-president of the Society of Advertising Consultants) on the Advertising Convention at Wembley; that by Mr. Ilston Cox on "Problems of Printing Inks"; that by Mr. J. D. Wise on "How to be Happy though a Printer"; and that on "Printing Types," by Mr. Geddes, of Messrs. Caslon, Ltd. The March meeting took the form of an exhibition of printing executed by members, and Mr. R. B. Simnett, president of the South-West Association, opened a discussion on the exhibits and the selection committee chose those specimens to be forwarded as the exhibits of the E. and N.E. Association. On July 17th, as a summer outing, the Association visited Messrs. Spicer's Paper Mills, at Eynsford, Kent, investigating the Chislehurst Caves *en route* to the mills.

Before concluding, the report makes a couple of cordial personal acknowledgments. Of Mr. J. Johnson (L.M.P.A. Organiser), it is put on record that he "has done yeoman service in our area, and it is wholly due to his untiring efforts that the Association steadily grows in numerical strength and that interest in the work of the Association on the part of its members is maintained." Indebtedness is also expressed to the representative of the *British and Colonial Printer and Stationer*, whose "splendid reports," it is stated, "have enabled the deliberations of the Association to reach that wider audience that their high standard and quality deserve."

Edward Lloyd, Ltd.

The directors, in their report for the year ended December 31st, state the profits, after allowing for depreciation, bad and doubtful debts, income-tax, estimated Corporation Profits Tax and contingencies, amount to £214,307 19s., making, with the balance brought forward from December 31st, 1923, £30,893 7s. 1d., a total of £245,201 6s. 1d. After deducting interest on pension account, directors' and auditors' fees, head office and transfer office expenses, £5,912 13s.; dividend on the preference shares for the year to December 31st, 1924, £47,250; and interim dividend on the ordinary shares for the year 1924 at the rate of ninepence per share (free of income-tax), paid October 1st, 1924, £45,000, there remains a balance as per balance-sheet of £147,038 13s. 1d. The directors recommend the declaration of a final dividend for the year 1924 on the ordinary shares at the rate of 1s. 3d. per share (free of income-tax), making 10 per cent. for the year (free of income-tax), £75,000, also that the sum of £10,000 be placed to Pension Account, carrying forward to the next account £62,038 13s. 1d. The profits for the year, after making provision for company expenses, show an increase of £19,905 14s. 10d., as compared with 1923.

THE Soviet Government has made a contract with the Esthonian papermakers for the supply of 9,000 metric tons of paper at a cost of 350,000,000 marks, and 12,000 tons of newsprint were also purchased in Norway for 7,000,000 Norwegian crowns.

Printing and Paper Workers' Home.

The New Filey Establishment.

A brief report appeared in last week's issue of the opening of the new convalescent home of the National Union of Printing, Bookbinding and Machine Rulers and Paper Workers—the outcome of the success of the existing home at Carshalton, Surrey. We are able herewith to publish an illustration of the new home, which consists of a fine mansion, with cliff gardens extending to the foreshore, looking out on the tremendous sweep of Filey Bay.

THE NEW HOME AT FILEY.

The opening ceremony was, as previously stated, performed by Lord Riddell, there being a large gathering of trade union representatives and others on the occasion.

Mr. Newland presented a gold key to Lord Riddell, with which to perform the opening ceremony.

Mr. George Harraway presided at the subsequent luncheon.

Mr. Newland, in proposing a vote of thanks to Lord Riddell, referred to him as an ideal employer, and said that though having had in their trade sometimes extraordinary difficulties, they were also extraordinary in the way in which they settled those difficulties within their own industry. (Hear, hear.) He referred to the great work done in connection with the sickness and difficulties of members of the Union and of allied trades, and was very proud of the fact that they now possessed a magnificent convalescent home in the North, in addition to the splendid home at Carshalton, Surrey, through which, since its establishment in 1916, 2,500 of the members of the organisation had passed. (Applause.) The members contributed a halfpenny a week towards the maintenance of the homes. (Applause).

Lord Riddell, in returning thanks, expressed his surprise at the magnificence of the Home, which he described as a palace, and he congratulated the members upon its possession. In the old days palaces were reserved for individuals; in these days palaces were being acquired by masses of people for their own use. They all knew that the primary object of trade unions was to improve the wages and conditions of labour, but he was sure that the pious founders of trade unions, which had done more for the working classes than any other movement, never dreamt that their efforts would result in such a movement as they were met to honour that day. (Applause.) It was one of the most admirable features of collectivism; it was the sort of Socialism or Co-operative movement which would receive the full support of all political parties. (Hear, hear.) In this country, he was glad to say, there were no political or class boundaries when dealing with human suffering. (Applause.) They were engaged in a noble experiment, which he wished great success. (Applause).

Mr. Chalk (chairman of the Convalescent Homes Committee) proposed the toast of "The Visitors," to which the Right Hon. C. W. Bowerman, M.P., replied. He paid an eloquent tribute to the work of Mr. Alfred Evans, the first general secretary of the union, who had first conceived the idea of creating the fund by which the union had been enabled to establish a convalescent home at Carshalton, Surrey, for the members in the southern part of the kingdom, and the northern home, "Northcliffe," Filey, the opening of which they were celebrating.

We are indebted to the courtesy of the *Daily Herald* for the use of the block illustrating the home.

British Tin Box Manufacturers.

Trade Discusses the Question of Costing.

The British Tin Box Manufacturers' Federation held a general meeting in London on the 2nd inst., when the chair was taken by Mr. F. N. Hepworth, chairman of the Federation, who extended a hearty welcome to those present and expressed his pleasure at the large number attending. He then made reference to the bad state of trade which had existed in this industry for some time past and stated that, after several meetings of the trade had been held for the purpose of considering the situation, it had been decided that the best prospect of improving conditions in the trade was to introduce a uniform system of costing. The Federation had accordingly called this general meeting of the trade for the purpose of considering costing and had arranged for Mr. Williamson, F.C.W.A., the secretary of the Costing Committee of the Master Printers' Federation and chairman of the executive council of the Institute of Cost and Works Accountants, to address the meeting.

Mr. Williamson's Address.

Mr. Williamson stated that he had come with the deliberate intent of showing that the Federation Costing System could be equally successfully applied to the production and printing of tin boxes as to the printing of paper. He pointed out that the Federation Costing System had long since passed the experimental stage and was a generally accepted scientific method of finding the cost of production.

He especially emphasised the importance of correct costing. It was necessary that every item of expense should be accounted for and any system of costing worth the name would take definite control of all labour costs by securing correct returns of time for which wages had to be paid. It would also provide for a proper supervision of the materials used, whether they be directly chargeable to the job or necessary in connection with the operations.

He next reviewed the value of departmentalisation. It was shown to be necessary that each production centre should be debited only with such expenses as had been incurred by it. In effect each department becomes a factory within a factory, each with its own weekly statement of cost of production and records of what have been earned by taking the actual times charged to jobs and adding the appropriate rates for the operations peculiar to that section.

He next dealt with the necessity for a proper distribution of overhead expenses and stated that the possibility of allocating many of the general expenses direct to departments was very remote. In the Master Printers' Federation System the overhead expenses were recovered by a percentage added to the direct departmental expenses plus the wages paid in the department. Any attempt to recover cost by the addition of a flat percentage to wages was as fallacious as it was easy; it was as unsound as it was unscientific; it was as inequitable as it was disastrous in its results.

The main bases for distribution of the expenses are on floor area occupied by the various departments, value of plant and wages paid. Floor area absorbs such expenses as rent, rates, lighting and warming. Value of plant governs the distribution of interest on capital, depreciation and insurance. Wages paid decide what proportion of employers' liability and holiday payments should be debited to the various departments.

He then showed that the Master Printers' Federation Costing System could be applied to any kind of manufacture which ended in a definite order. Only slight modifications are necessary to apply it to mass production.

Points dealt with included interest on capital as an item of cost, depreciation of plant and salary for the owner as further items. "Chargeable time" was explained, and a brief outline of the System given. Mr. Williamson also related many instances of the immediate benefits that had accrued to firms as a result of the installation of the Master Printers' System.

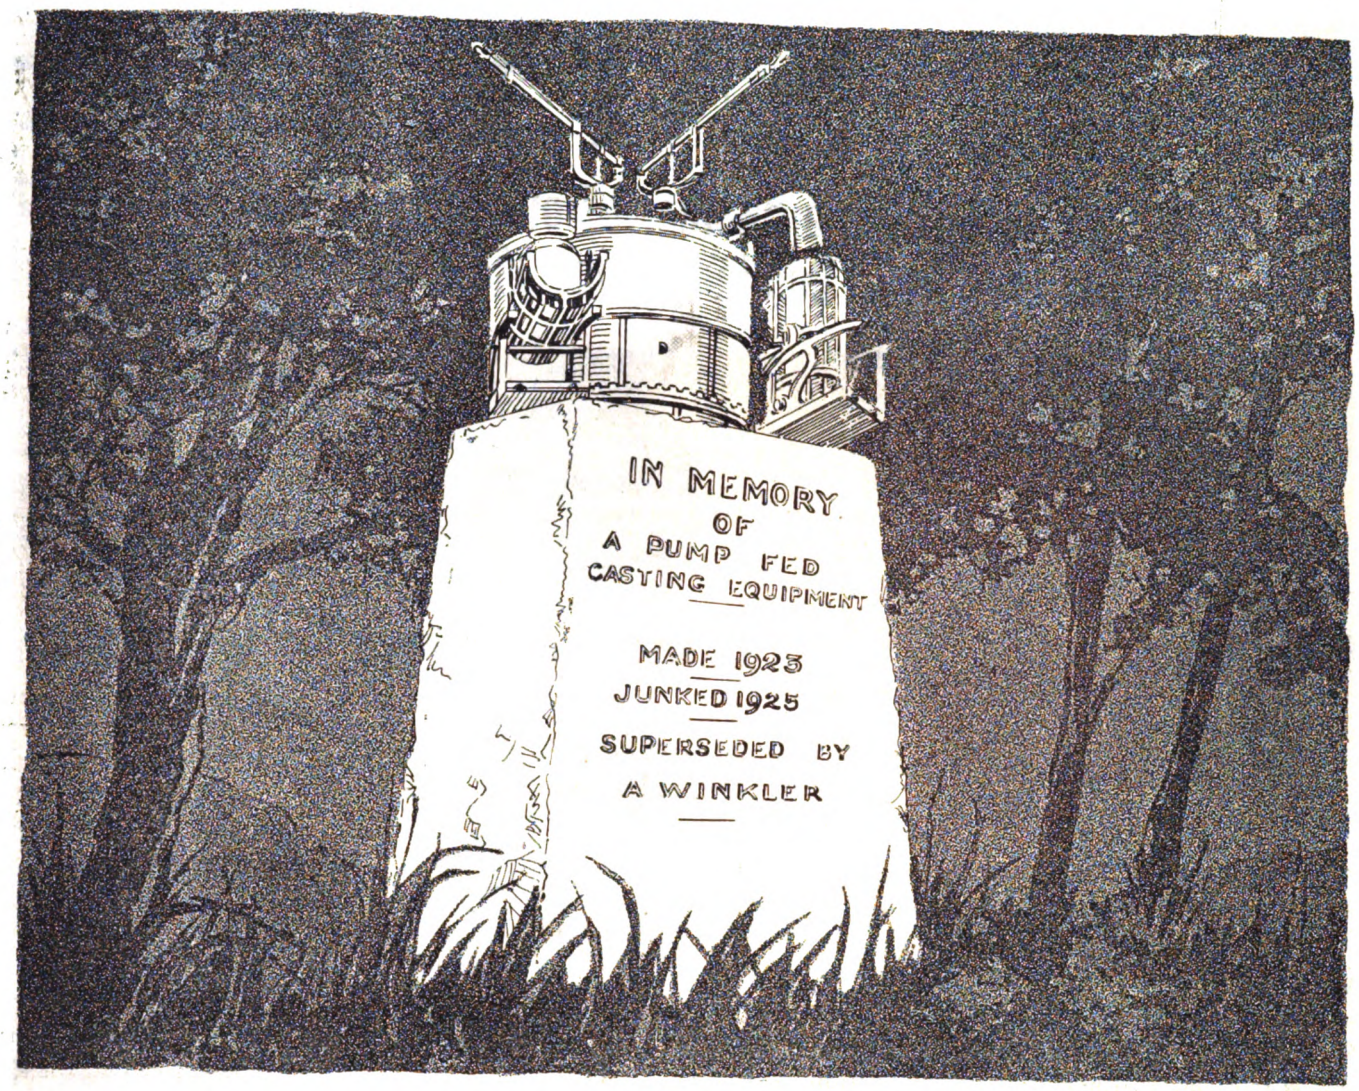
Applicability of Federation System.

The chairman then announced that the meeting was open for discussion and questions.

To a query as to whether the Federation Costing System as largely used by commercial and general printers was equally applicable to the tin box trade, Mr. Bramwell of Messrs. Barclay and Fry, stated in reply that his firm had had the Costing System of the Master Printers' Federation in operation in their works since 1912 and had actually applied it to tin box manufacturing with success. The principles of the Federation System were sound, and its elasticity made it possible to apply it to any size of business and they had found no difficulty in adapting it to the Tin Box Section of their works.

Asked what steps should be taken to start a costing movement in the tin box trade and to maintain interest in it, Mr. Williamson said the Federation of Master Printers set up a small committee to formulate a proper costing system. Many meetings were held and eventually the System as now in use was compiled. Meetings of printers were held all over the country and addressed by members of the Costing Committee and other leading printers. It was then found necessary to appoint an official who could be invited to instal the System in the offices of any of the members of the organisation. Propaganda literature was prepared and circulated to every member. On similar lines it would be possible to organise your organisation

In replying to another question, Mr. Williamson gave particulars as to the cost of installing and running the System in a factory.



At the end of the discussion it was moved by Mr. Hepworth:—"That this meeting considers that the introduction of a uniform costing system for the tin box trade is in the best interests of the trade and remits the matter to the executive council of the British Tin Box Manufacturers' Federation to further consider the matter and to take such steps as they may consider advisable to introduce a costing system."

Mr. Francis supported the motion in a very interesting speech, and on being put to the meeting it was carried unanimously. Mr. Liverman suggested that the council might at the same time consider many other matters affecting the trade, such as for example, carrying stocks for customers and extended deliveries under one contract over a long period.

The proceedings terminated with the passing of a very hearty vote of thanks to Mr. Williamson for his informative and interesting address, and to the chairman, Mr. F. N. Hepworth, for presiding at the meeting.

THE hardest difficulty any man ever has to face is his own unruly self.

This pump-fed caster might have lived twenty thousand plates longer had it not been beaten hollow by its successful rival—

the "Winkler"

Here is a pump-fed vertical casting box deserving of that kind of sympathy that is aroused by inferiority. Its days of usefulness are over. Yet it is only a young machine, which should be at the height of its serviceableness—laughing at the stress of rush editions.

But it is scrapped! The advent of the "Winkler" Auto. Casting Machine has made its mechanism a valueless pile of junk. The unchallengeable advantages of the "Winkler" have probably sent more casting equipments to the scrap heap than any other single cause.

Yet many Newspaper Managers still seem to be surprisingly unconcerned about the *kind* of casting equipment used in their foundry. And they pay for this lack of interest or progressiveness with loss of time and money, with minor and major breakdowns and mechanical worries.

Are YOU using such old-fashioned, moribund casting equipment?

If the answer be affirmative just send for the complete story of "Why it pays to discard your existing casting plant in favour of "Winkler" Equipment."

Come and see it in operation at the PRINTING EXHIBITION, STAND No. 9, ROW C, GILBEY HALL.

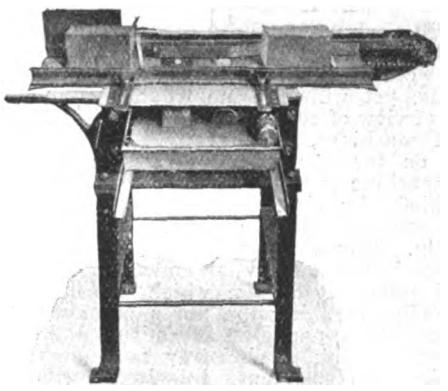
)RNE, LTD.

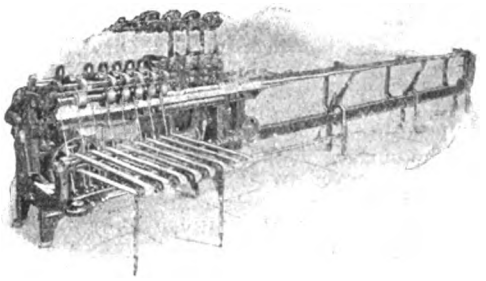
Printing, Bookbinding and Allied Trades Machinery Exhibition at the nds Nos. 2a and IIc, in the Gilbey Hall, including the following:

Murray Improved Bundling Press.



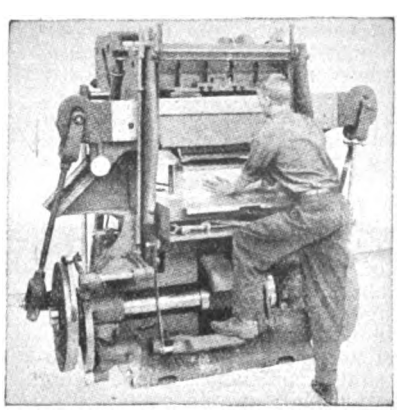
For pressing and tying up folded sections, also for tying up magazines, journals, weeklies, etc. Enormous pressure easily obtained as the ratio of gearing is 200 to 1.
Instantaneous release to pressure.
Big economy in string and cord.

R.S. No. 42 Rapid Jobbing Folder.



ne, two, three or four folds. Can have 16 rallel attachments. Enormous speed. ntest Jobber on World's market.

All our Machines are installed everywhere on an open trial basis and the Engineering Companies manufacturing the different Machines have in most cases specialised for nearly 40 years in the designing and building of these Labour-Saving Machines with wonderful results. Their great popularity is proved by the enormous number in use and the continual repeat orders being received.



Book Back Gluer.

Gluing backs of Books, Magazines, Catalogues, etc.

Christensen Wire Stitcher Feeder.

Gathers, covers, wire stitches, all in one operation at an enormous speed, Magazines, Booklets, Weeklies, Pamphlets, etc. Over 400 installed.

Seybold New 3-Knife Book, Magazine and Pamphlet Trimming Machine.

Very successful—many installed.

Printers and Their Ink.

Some of the Troubles Explained by Mr. H. D. Keats (Mander Bros.).

If a census of the ink troubles most frequently encountered with the use of jobbing blacks were taken, I should expect to find the honours almost equally divided **amongst the four suits, namely: 1st, too slow** drying—on paper; 2nd, too fast drying—on machine; 3rd, set off; and 4th, filling in.

The first two can be linked together in our review. It does not present a great difficulty, to the ink manufacturer, to supply an ink which will work well and dry quickly when used in conjunction with ordinary printings and other similarly soft-sized papers or cards, yet will give no trouble from the point of view of requiring frequent washing up of machines, which can even be safely left on for a number of days, providing the machine is run each day.

Ink dries chiefly by either one of two processes, and sometimes by a combination of both—namely, absorption or oxydation. For such a general all-round ink, the manufacturer would select a medium which is capable of rapidly searching the fibres of the paper, yet slowly responds to the action of oxygen. Such an ink is obviously unsuited to banks, bonds, linens, tub-sized ledger papers, vellums, flint-surfaced, hard sized or similar highly-calendered stocks.

For such papers the varnish used must be one which is highly amenable to the action of oxygen; this, of course, can be accelerated, within certain limits, by the addition of peculiar drying compounds which are capable of absorbing oxygen from the air, and imparting it to the ink with which it may be incorporated.

Should an ink that has been made to dry almost entirely by absorption be used on such papers, its drying will not be a matter of hours, but of weeks, and in many instances will eventually leave the pigment lying upon the surface in the form of a dry powder, easily removed by the lightest of rubbing.

Temperature and Humidity.

Nor must it be overlooked that the degrees of both temperature and humidity prevailing in an office play a very prominent part in the speed with which an ink will dry; where an ink takes 12 hours to dry in a temperature of 54 degrees, it can be made to dry in 8—9 hours by simply raising the temperature 6 degrees; and still more quickly by causing constant circulation of air.

The position a machine occupies has a bearing also. When placed next a large area of glass, frequently during the summer inks will become semi-dry on ends of rollers or slab by midday, while in winter the other extreme will be experienced. Draughts will often be found to be an unseen, yet direct, cause of too rapid drying on rollers, etc.

Cellars and basements, too often damp and cold, although at one time deemed quite the correct place in which to instal costly machinery, have now, fortunately, secured recognition as being entirely unsuitable for the production of good class modern jobbing work. Such places, however, can still be met with on very rare occasions.

It is from the underground machine rooms that complaints as to too slow drying, difficulty of folding sheets or lack of even distribution of ink and set-off during the cutting of jobs most frequently occur. If the machining is carried out in such surroundings, the excessive addition of driers will only increase the difficulty of distribution without any appreciable benefit being obtained as to drying on the paper.

The remedy is to remove the sheets to a drier and warmer atmosphere immediately after printing; or, better still, provide some artificial method of efficient heating.

Problem of Filling-In.

Rapid filling-in of illustrated or other formes is usually ascribed immediately to some fault in the grinding of the ink; but as a matter of fact the modern printing ink is the least likely cause to-day. Of course, it is not wise to use colours, such as the true umbers, siennas and ultramarines, for half-tone printing, because any colour having for its pigment an earth or metallic base does not lend itself to being broken up into that impalpable powder which is so essential for the clean running of half-tones.

During the deposition and subsequent calcination of lamp-gas or other substances from which the black pigment is obtained, great care must be exercised to secure the correct temperatures; otherwise crystalline particles will be deposited which cannot be removed or broken up by any amount of subsequent milling. Should these particles find their way into the ink, they will cause the surface of the forme to wear badly, and also become a direct cause of rapid filling-in. For such an ink the only remedy is to return it to the maker.

Other and more frequent causes of this trouble can be found in badly adjusted inkers, which either scrub or lightly wipe the forme's surface; and formes not being thoroughly cleansed before being broken up for distribution. It is surprising how a sediment of ink and paraffin left in the bottom of a half-tone screen, or in the cups of letters, will harden and destroy the necessary depth of screen or letter that is so essential for clear, sharp printing.

Loosely coated arts or dusty antique papers are responsible for a lot of dirty working; in such instances the tackiness of an ink can be advantageously adjusted by adding some wax varnish and so reduce the pull of the ink to a minimum.

When ink becomes semi-dry, work is almost bound to fill in on the run; as a matter of fact, to wash rollers as little as possible is often false economy. The running time saved and the brighter and more snappy appearance of the work more than repay for the time taken to wash rollers and slab daily.

Dust is undoubtedly the worst enemy in the machine room; if present where half-tone or colour work is in progress, it will cause considerable trouble and waste; yet frequently large tins of ink are opened, and apparently the lid duly lost, the tin perhaps remaining for a week or more before all its contents are used up; and it is not unknown for the minder to use it as a footstool when changing his boots!

Again, belting disturbs and throws a great deal of dust about, also people walking overhead if the ceilings are whitewashed.

Quality versus Price.

Setting-off is a defect which should be guarded against as far as possible, it being so quickly apparent to customer or the average person outside printers. On general work it most frequently arises from using an ink which is very unsuitable for the paper, possibly it is too stiff and requires softening, or maybe it is a cheap brand lacking body, therefore rendering it necessary to carry a greater quantity to secure a given density.

The soundest economy is to judge your ink, not by its price per lb., but rather by its reamage or covering power. I have known a saving in hard cash to follow by the substitution of a 4s. for a 2s. 6d. black on a job. The extra covering power is brought about by finer grinding, which incidentally costs money; but a much thinner film without loss of depth can be carried. This brings in its wake less risk of set-off, more rapid drying of the work, with consequent quicker handling for perfecting, cutting, folding or delivering. It is an actual fact that an ink, a portion of which is ground twice as fine as another, will just as efficiently cover three times the area of that covered by the portion receiving the lesser grinding.

That well-worn phrase, "The best is the cheapest," must have been coined by some early follower of Caxton. It is certainly very applicable when it is remembered that the ink is the item of least cost in the production of a job. So much so, that it is not unknown for estimators to leave it out altogether.

Excessive impression and lifting work from delivery board without some support are amongst the causes most directly responsible for set-off.

Whenever printing on hard-sized or highly-calendered stock, an ink possessing strong oxydising power should be used, the work kept in small heaps and handled as little as possible during the four hours immediately following the machining: this will give it the opportunity to set, not off, but into, the paper.

Various gas or electrical attachments have been placed upon the larger machines to hasten the drying. While these are very useful on ordinary book wook, they necessitate a great deal of care in regard to their effect upon register work, except when running the last colour.

The ink manufacturer has given considerable time and thought to the prevention of set-off, and now produces inks to suit every class of stock, and oft-times a single ink which will work well on a wide range of papers; but it is expecting rather a lot to ask, as sometimes occurs: "Oh, give me a couple of pounds that will dry up quick on everything, but mind we only wash our duct out during holiday times or at most once a month."

Various compounds have been evolved to meet the case, such as wax varnishes, adinol, glissol, non-set-off paste. When small quantities of these are added to inks, the setting of them into the paper is materially hastened; but all the chemist can do will avail little unless the printer keeps his rooms dry and warm, uses discretion both in the choice of an ink and the quantity he runs on the job, and, above all, handles the wet work with care.

When jobs must be immediately backed up, a previously-prepared oiled tissue placed over the cylinder is preferable to repeatedly washing of the top sheet.

Less Frequent Difficulties.

Having very briefly dealt with some of the most general complaints, which all printers "enjoy" in common, I will touch lightly upon a few which are of less frequent occurrence, yet nevertheless are very costly, both in time and expense, to overcome when encountered.

One which only reveals itself when too late is that of having used a fugitive ink upon work which is eventually exposed to direct sunlight. Then along comes the usual complimentary letter referring to its having faded or having changed colour entirely. It is an excellent practice, and one which is becoming more general, to indicate the degree of permanency which an ink possesses, by placing a letter against each in the ink list.

I would urge you to make good use of this information, also when about to work jobs after the manner of counter-advertisements, showcards, etc., which may later be given a coat of spirit varnish, or for labels which may be used for wrapping scents, soaps or articles containing volatile spirits and alkali. Should the ink not be proof against this liability, it will almost certainly change its colour or fade away entirely in a short space of time. If in doubt, it is better to consult the ink maker, rather than risk the expense of a reprint, or, worse still, a disappointed customer.

Should a semi-fugitive ink have been used in error, the only way to increase its permanency is to overprint with a protecting coat of hard, white varnish. Similarly, should a colour, when handed to the varnishing department, show an indication to "bleed" or run—many reds are specially liable to this trouble—it is better to have a solid tint block made and secure a varnished effect by overprinting with either a special glossing preparation or a good copal varnish.

Should the job contain many high lights or white margins, it will probably mean two workings, the first being a flat tinting medium slightly reduced with turpentine.

Before leaving showcard work—there is one particular trouble, due to alkali, that often causes a great deal of worry. The stock employed for mounting the printed sheet upon is usually strawboard. This generally contains sufficient alkali to permit of it being released when the freshly-pasted print is affixed. The moisture draws out the alkali, which, penetrating the paper, degrades the colour of the ink. A sure remedy is to use thin glue in preference to gum or paste. Many coated papers are

Lecture at meeting of South-West London Master Printers Association, May 5th.

Digitized by Google

strongly alkaline and will respond to a litmus paper test.

Tint printing is prone to turn out less satisfactory than anticipated. If in the nature of a large flat area, such as backgrounds or borders, it is essential to make the tint lie flat and matt.

A further defect connected with tint printing is a washy or splashed effect round the edges of any line work, as though it had been squeezed on instead of rolled. This is generally the result of mixing tints in the machine room by adding a little body colour to some litho varnish. Naturally the consistency is much too low for printing purposes. It is much more satisfactory to use tinting ink instead of the varnish, because its consistency is equivalent to that of printing ink, thus permitting of correct rolling and lifting evenly from off the forme.

Many a tin of tint ink has been condemned as being the wrong colour when it has been the fault of having too much or too little upon the rollers. Different tones in various reams of paper will play havoc also in this respect.

Tints made with litho varnish are very liable to separation, whereby the varnish becomes absorbed into the stock and the actual colour powders on the surface. This can be remedied by the addition of oxydising compounds, such as paste driers or turpentine.

Metallic Inks.

As to metallic inks, a means to ensure success of the dusting process is to secure a good medium, tacky and rapid drying. If there is pulling it is better to slow the machine rather than reduce the ink.

However, dusting is admitted to be the bugbear of the trade, and very presentable commercial results can be obtained by the use of metallic inks. The greatest of their drawbacks is dullness and liability to work cheesy. A tendency to work cheesy can be materialy reduced by using well-seasoned rollers, choosing a dry, warm room for working in. Never attempt to run this work on cold wet days, and, above all, remove every trace of grease from rollers and slab prior to inking up.

Coming to double-tone inks—the non-use of these seems to me to represent the most obvious neglect of opportunity upon the part of the letterpress printer. They offer the most artistic means of illustrating a large range of work.

Securing Glossy Results.

To go now to the other extreme, namely, that of securing very brilliant, glossy results—with one printing only, this is admittedly a very difficult task, due entirely to the absorbent quality which every paper possesses in some measure. The brighter the result required, the more rapidly must the ink be made to oxydise with the best quality of hard drying varnishes, similar to those used in die-stamping inks.

The problem of not destroying the roller's surface arises. I am afraid the only precaution other than keeping a smear of tallow along the ends of rollers beyond the outside edges of the forme, is to wash up before the ink dries hard on, for instance, before every meal time or when the machine has to stand a while. If turps, benzine or paraffin fail to remove dried ink, try crude carbolic acid.

By using a good gloss blocking ink and adding copal varnish, an extremely high glaze can be secured for lettering or showcard work. I have seen results obtained in one printing that are in nowise inferior to over-varnishing, with the added advantage of the glaze only appearing upon the actual work, giving it a decidedly bold appearance.

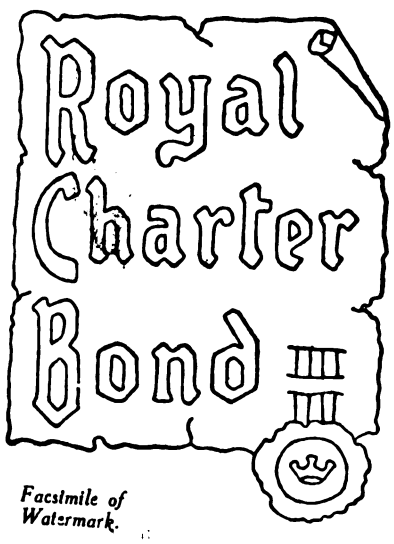
Once inked up, the machine must be kept steadily running, and frequent washing up should be allowed for when estimating.

Satin inks, if used with discretion, will supply the necessary delicate touch which is often wanting in fancy stationery and similar work. Little difficulty presents itself in their use, providing the two ingredients are thoroughly mixed, and the same precautions are observed as when printing metallic inks.

Three and Four-Colour Work.

I should now like to say a few words in reference to three and four-colour process work. Its successful execution is beset with a wide variety of obstacles, but few can really be associated with the actual ink providing the blockmaker's progressives are followed in a reasonable manner as to strength and shade of colours.

Three difficulties only are really troublesome, and care should always be taken to guard against them.



The first is liability of colour to rub off. This occurs more particularly with the yellow ink when a very highly-coated paper, which nevertheless usually possesses a soft esparto body, is used. This, in conjunction with the clay coating, sets up the old trouble of disintegration, absorbing the vehicle rapidly and leaving the pigment upon the surface in powder form

Such a condition will frequently bring about the second difficulty, which consists of rapid filling in of the forme during red or blue working. Should this occur when no dust from paper or elsewhere can be traced, and the ink appears quite silky in texture when stirred with the palette knife, it is as well to closely examine the particles which have filled in on the forme.

The third difficulty is one which, if not detected early in a job, can become a very costly proposition to rectify. It is that of the refusal of one colour to lift upon another. When such defect occurs, the glazed surface should be broken up by brushing with silk or chamois leather.

MESSRS. SAMUEL JONES AND CO, LTD., issue a varied and unique assortment of papers and boards. In addition to everything in the non-curling gummed line, there are an infinite number of utility papers, including Victory board (watermarked), F. White box enamel, wood veneer, sensitised cheque and Algamyn papers. Tints and colours are a speciality, bronze watered flint and steel blue being very striking products. Waverley tinted pulp boards are another striking feature of the Samuel Jones service.

THE Treasury Department at Washington has revoked its order of March 14th, forbidding importations of news-print paper from Holmens Bruks and Fabrics A.-B., of Norrkoping, Sweden. The previous order has been rescinded, it is announced, because the firms have decided to allow U.S. Government officials to see their books.

A Talk About Inks.

Mr. H. D. Keats Explains Some of the Difficulties which Face Master Printers.

A particularly interesting evening was spent by the members of the South-West London Master Printers' Association at their May meeting, held at Arding and Hobbs Restaurant, Clapham Junction, on Tuesday week. Mr. H. D. Keats, of Messrs. Mander Brothers, had been invited to give an address on the troubles which master printers meet with in the manipulation of their inks. From a complete knowledge, not only of inks and their constitution, but of the craft of printing in general, Mr. Keats was able to throw a great deal of light upon the problems which the master printer encounters. Mr. Keats had brought with him a large number of specimens of printing and other exhibits to illustrate his discourse, and he also performed some interesting experiments which at once delighted and instructed his hearers. The address will be found on another page of this issue.

Following the address, which extended well over an hour, Mr. Keats was thanked in no measured terms for his illuminating address, and he answered a number of questions on practical details. In reply to a point raised by Mr. Wise in regard to double-tone inks, Mr. Keats observed that a very fine and highly coated paper absorbed the ink so rapidly that there was no chance of the ink spreading, whereas on cheap paper, like imitation art, it allowed the ink to get hold of the paper and spread slowly. Therefore the cheaper arts invariably gave better results. Mr. Keats added that the screen of a block had not so much relation to the ink as it had to the paper The coarser the paper the coarser the screen was, generally speaking, a very safe rule.

With regard to printing half-tone illustrations on rag paper, for which a member had received a demand, Mr. Keats observed that this was possible, but costly, and it called for very great skill on the part of the machine-minder. Incidentally, he mentioned that there was a process to-day whereby the coating of a paper could apparently be removed. After the printing of the three colour or half-tone illustrations, it was passed through a crushing process, whereby the coating was, not removed, as some people claimed, but destroyed so far as reflecting light was concerned, and they lost the effect of the coating. Blind blocking was also suggested, or the half-tone illustration might be tipped on.

Mr. Royce suggested the offset process to overcome this difficulty. He went on to pay a very glowing tribute to the interesting character of Mr. Keats' lecture. With regard to the troubles which all experienced, he held that everything depended upon the judgment of the printer. He agreed with Mr. Keats that it was cheaper in the end to use the best inks. In one particular instance he mentioned that by employing more costly inks they did not use more than a third of the quantity, as compared with an inferior quality, and there was the additional advantage of no lost time. However, although they might use the best inks and the best paper there were atmospheric and other conditions to be contended with, so that a great deal depended upon the worker himself and the management. Unless a fair amount of forethought was given to the matter, they would be up against some kind of difficulty on every job they tackled.

Following an observation by Mr. Pegg, who had found a difficulty in repeating the gloss which had been obtained on a previous printing, the lecturer observed that it was extremely difficult to get a gloss with one printing, but if they had a flat printing first it was easy, because they had covered the fibres.

Mr. Pegg mentioned that the first paper used was a German. He knew it was German because between the sheets he had found a million mark note. (Laughter.) He had not intended to buy German paper, but it was a lovely sheet, and did the work splendidly. But that gloss could not be repeated on subsequent printings, and he did not understand why it was that the paper shou'd cause the trouble.

Mr. Keats said he should be loath to think that the paper was at fault. The second effect was not being printed on the paper, but on the ink. If they had a flat tint and it did not rub off, they were printing on a different surface. It did not matter how coarse the paper was; provided the fibres were well filled with the first printing they should get a good gloss. A little copal varnish to their second ink would give them a good result in their subsequent printing.

Mr. E. G. Baker—who apologised for the absence of Mr. Langley, the president of the London Master Printers' Association, who had felt it his duty to attend the meeting of the East and North-East District—paid a tribute to the character of the training which Mr. Keats had given at the London School of Printing, and said the same care was shown in the address he had given that evening.

Mr. Spring, who observed they had listened that night to a master craftsman, said his objection to common art paper was that it was spotted.

Mr. R. B. Simnett, the president, said they might consider all their problems, but they came back to the basic fact: How were their factories ventilated, and what was the constant atmosphere in those factories? In their own factory, which was now centrally heated, nine-tenths of the troubles with ink and paper had been eliminated, because they were kept in one atmospheric condition from January to December. After a reference to blue inks, Mr. Simnett insisted upon the advisability of mixing all the ink for one job at the same time. Then they got the same colour throughout. He agreed that the better inks were the cheaper in the long run.

On the subject of metallic inks, the president said he had tried every gold ink he could get, but he still recommended good bronze powder, carefully treated in a bronzing machine.

With regard to double-tone inks, the speaker referred to the difficulty he had found of getting a particular ink repeated exactly, and he mentioned the difference between a proof which he had sent out and the job itself, both being done under exactly similar conditions.

Mr. Keats, in replying to the discussion, first of all dealt with a question which had been asked as to the best means of preserving ink in a tin which had once been opened. He mentioned that in the tins they would find a piece of paper, usually greaseproof, placed there with the intention of preventing the ink from oxidising. He thought a little more care should be taken by machine minders. If the ink was cut off level and an oiled sheet of paper placed on the top, it would prevent skinning over a greater length of time. It was a mistake to dig the knife down into the ink.

Coming to the variation of colour in double-tone inks, Mr. Keats observed that black double-tone gave excellent results with matt art paper. Dealing with the point raised by Mr. Simnett, Mr. Keats suggested that possibly the proof had been taken straight off the machine and exposed to the air all the time, whereas in running off the job the work was covered up immediately by the succeeding print. Therefore it was possible, although the conditions of printing were intended to be absolutely the same, they varied, inasmuch as in one case the work was covered up immediately, whereas the proof was not. The vital time was the first few minutes after printing. He agreed that blues represented a difficulty if they were made from certain of the cyanides, but the latest methods overcame this difficulty. Bronze blues were admittedly difficult to use on art paper.

On the subject of colours coming from Germany, Mr. Keats mentioned that before the war a lot of colours came here from that country, but now the firm he represented made every ounce of their own dry colour and he thought master printers would be pleased to hear that whereas colour was bought from Germany before the war, we were now selling dry colours to Germany. (Hear, hear.)

Emphasising the need for economy in printing offices, Mr. Keats observed that printing was now cut to such a fine point that many firms must look to the elimination of waste in order to secure their profits. At the present time the waste was terrific and the time saved in printing or overcoming a difficulty was money saved. That was his excuse for speaking to them at such length that evening. (Applause.)

Mr. Tacey, the vice-president, proposed a vote of thanks to Mr. Keats, and both he and Mr. Wise, who seconded the resolution, spoke of the very valuable hints and information which the lecturer had imparted. Mr. Wise observed that if only master printers would consult the ink makers before they got into trouble, by sending them a sample of paper and indicating the class of work for which they required the ink, they would be saved an immense amount of trouble.

Mr. Keats suitably acknowledged the vote.

"BENJAMIN FAWCETT, COLOUR PRINTER AND ENGRAVER," by the Rev. M. C. F. Morris, B.C.L., M.A. London: Humphrey Milford, Oxford University Press, Amen corner, E.C.4. Price 5s. net.

This book is one that should greatly interest all who admire enterprise and perseverence in the individual, as it gives the particulars of the career of an industrious and patient worker who devoted practically his whole life to the production of fine illustrated volumes, and acquired great skill in the art of wood engraving so that he might produce his own blocks from which to print his pictures. Benjamin Fawcett, after serving an apprenticeship as bookseller, stationer and printer, started in business on his own account in the Yorkshire town of Driffield, in the year 1831, and was successful from the beginning. Commenced in a small way, his business soon developed into an establishment that employed from fifty to sixty persons. After issuing a number of small volumes, daintily illustrated in colour, and dealing mostly with sea shells, birds, flowers and similar subjects, he met the Rev. Francis Orpen Morris, vicar of Nafferton, and carried out successfully the printing of that gentleman's "History of British Birds," a somewhat colossal work that has gone through many reprints and editions, and that is still the standard and popular book on this subject. This work ran into six large royal octavo volumes, had about three hundred and sixty coloured engravings, and was a remarkable venture to be undertaken by a comparatively small printer in a little country town. Every one of the plates for this book was engraved on wood by Fawcett's own hand, and each specimen plate for the colourers was painted by his wife. Mr. Fawcett had much work to do in connection with the production of his blocks. He imported the boxwood from Turkey in the form of short logs, and these were cut transversely into type-high slabs, which were allowed to mature for at least three years before being used for engraving. Mr. Fawcett's skill in boxwood engraving was enhanced by his acquaintance with Thomas Bewick, from whom, doubtless, he acquired some practical knowledge of the art, and the remarkably fine results he obtained are well worth the study of present-day colour printers. His printing was done on hand presses, and shows most careful work. Many works on natural history were issued from Mr. Fawcett's office, including Morris's "History of British Moths," and Jonathan Couch's "History of the Fishes of the British Isles," and he also printed Lydon's "County Seats," a magnificent work that ran into large editions. Fawcett's colour printing was in its own way equal to that of George Baxter, although produced by different metnods, and we can recommend this account of his career and work to all who are interested in the art of colour printing. Mr. Morris tells his story well and has produced a most readable book. We may note that Mr. Milford, the publisher of the volume, is also the publisher in this country of the books issued by the American University Presses.

"BRITISH TRADE IN AUSTRALIA" is the arresting title of the monthly review of the Australian Association of British Manufacturers and Their Representatives. With the January issue the publication takes on a new and enlarged form and the front cover indicates the patriotic and vigorous policy of the organisation. The feature of the design is a drawing of the Union Jack in colours, the centre of which is a lion's head carrying in its mouth a streamer bearing the words "British Trade." It is the ambition of the review, which has all the fundamentals essential for the constitution of a good monthly journal, to become the strongest factor in the big struggle for Australia's import trade, and those at the back of the Association may be relied upon to do all that is possible to this end.

THE general situation of the paper industry in Belgium is not so good as it was both from the point of view of home consumption and that of exports. Germany in particular competes keenly with Belgium mills.

News-Print Definition.

U.S. Proposal for Assessment of Import Duty.

Following is the proposed definition of standard news-print paper as regards assessment of import duty recommended by the Paper Division of the Bureau of Standards to the U.S. Treasury Department.

Standard news-print paper as covered by Paragraph 1,672 of the Free List of the Tariff Act of 1922 is hereby defined as paper intended for use in the printing of standard editions of newspapers and shall conform to the following specifications:

Weight.—500 sheets, each 24 by 36 inches, shall weigh not less than 30 pounds nor more than 35 pounds.

Rolls.—The paper shall be in rolls not less than 16 inches wide and 28 inches in diameter.

Stock.—Not less than 70 per cent. of the total fibre shall be groundwood; the remainder shall be unbleached sulphite. Whether the fibre is unbleached shall be determined by Bright's method.

Finish.—The average of five tests in machine direction and five tests in cross direction on both sides moving the paper after each test made with the Ingersoll Glarimeter, shall be not more than 50 per cent. gloss.

Ash.—Shall be not more than 2 per cent.

Degree of Sizing.—Time of transudation of water shall be not more than 10 seconds by the ground class method or five seconds by the alternate methods. The test shall be made as follows:

GROUND GLASS METHOD.—Cut the specimen of the sample to be tested about six inches square, fold into a box-shape about two inches square and two inches high, open at the top, the tabs formed by folding being held by paper clips. Place the box-shaped specimen on the ground surface of a piece of ground glass lying on a dark surface. Partially fill with water at 25 degs, 1 deg. C. After 10 seconds lift the box-shaped specimen and observe the ground glass underneath. If water has penetrated through the specimen it will show on the ground glass as dark spots or streaks which quickly disappear by evaporation.

ALTERNATE METHOD 1, VALLEY SIZE TESTER.—By the customary method of using this apparatus.

ALTERNATE METHOD 2, CURL METHOD.—Provide a vessel of at least two quarts capacity and fill with water at 25 degs., 1 deg. C. The larger the vessel the easier it is to hold the temperature constant. Cut the specimen of the sample to be tested in the the shape of a right triangle, one leg of which should be about two inches long and in the machine direction of the paper, and the other leg about three inches long. Make a crease parallel with and about half or three-quarters of an inch from the shorter leg of the triangular specimen, so that one part of the specimen makes an angle with the remainder. Holding the specimen in one hand by the point opposite the shorter leg, place it on the surface of the water so that the shorter leg is against one side of the vessel, in which position it will remain more steady than if placed in the centre of the vessel. Start a stop-watch simultaneously with this operation. The specimen curls and the longer dry portion serves as a pointer as it moves across the field of vision. When the curling in the initial direction ceases and the instant the specimen starts to uncurl, the stop-watch is stopped and the time recorded.

SAMPLING.—Samples for testing shall be taken from at least 10 different units of the shipment. The specimens tested shall be selected so as to be representative of the entire sample.

Continental Papermakers.

Important Meeting at Copenhagen.

On April 24th a meeting was held in Copenhagen of representatives of the Swedish, Norwegian, Finnish, German, Austrian, Czecho Slovakian, Dutch and Belgian manufacturers of better grades of printings and writings. Amongst other things the prevailing export prices were discussed, and one of the results of the meeting was a decision to establish an international exchange of statistics. The next meeting will take place in September.

Paper Trade Golfing Society.

Spring Meeting.

The spring meeting of the Paper Trade Golfing Society was held at Addington Golf Club on Tuesday April 28th, the following members being present:—Rowland E. Angel, Chas. Baker, Kenneth F. Baker, Frank L. T. Barlow, Keith Barlow, A. S. Batchelor, R. A. Beer, Capt. Noel V. Bowater, Arthur E. Brown, E. Lionel Brown, R. H. Calcraft, J. T. Chasney, Eric H. Cooper, J. E. Harmer Dalton, W. W. De Buriatte, Percy G. Denson, W. A. Dewsnap, Oscar Dixon, W. H. Dixon. C. S. Downing, A. S. Duff, Carl Eberstein, Philip T. Goldney, Leslie R. Grant, John W. Grant, R. G. Harvey Greenham, T. H. Groom, B. J. Hall, F. C. Harding, C. E. Higgins, R. Hubble, Capt. O. C. W. Johnsen, P. W. Kennett, C. F. King, C. King-Smith, E. C. Lait, T. T. Mackenzie, W. V. Marchant, K. S. Mason, S. Nicol, R. D. Oldham, W. C. Powers, E. H. Raynham, J. Rowley, S. G. Saunders, H. Savory, J. Seddon, G. W. Shilcock, F. A. Skerratt, W. Sommerville, Captain Ronald Spicer, A. H. Starnes, Jas. Stewart, John S. M. Stewart, Major H. S. Wescott, F. G. Whitaker.

President's Cup.

Mr. F. C. Harding was successful in winning the President's Cup in the morning stroke competition with a net score of 71, Capt. Noel V. Bowater being second with a net score of 76, and Mr. Leslie R. Grant and Mr. J. Seddon tieing for third place with net scores of 78. Mr. F. C. Harding therefore becomes the holder of the President's Cup for the current year.

Mr. F. C. Harding was also the winner of the society spoon presented to the player who returned the best scratch score in this competition.

Foursomes Competition.

In the afternoon a foursomes competition againt bogey took place, in which Mr. J. T. Chasney and Mr. F. G. Whitaker were the winners, with a score of 1 down; Mr. Frank Barlow and Mr. Keith Barlow being second with a score of 2 down, and Mr. A. S. Batchelor and Mr. Oscar Dixon being third with 3 down.

Captain's Prize.

The scores returned in the stroke competition were duly recorded for the purposes of the captain's prize presented by Mr. W. C. Powers.

Spicer Challenge Bowl.

The following members qualified at this meeting to enter the competition for the Spicer Challenge Bowl, to be held in the autumn: Mr. F. C. Harding, Capt. Noel V. Bowater, Mr. Leslie R. Grant, Mr. J. Seddon, Mr. Kenneth F. Baker, Capt. Ronald Spicer, Mr. C. S. Downing, Mr. R. H. Calcraft.

Lancs Paper Trade Golf Society.

The spring competition of the Lancs Paper Trade Golf Society took place on May 4th over the course of the St. Annes (Old) Golf Club, St. Annes-on-Sea, by the kind permission of the Captain and Council and the good offices of Mr. Chas. A. Stead, an ex-captain of the Club, who is also an old and well-known member and captain of the Society this season. The links were in fine condition and the arrangements made by the Club officials and steward for the comfort and enjoyment of the visitors were all that could be desired.

The competiton resulted as follows: 1st Division: R. H. Parker, 83—8—75; F. Booth, 84—9—75; F. B. Mitchell, 89—14—75, who tied for prizes.

The play off over 9 holes resulted thus: F. Booth, 42—4½—37½, 1st prize; F. B. Mitchell, 47—7—40, 2nd ditto; R. H. Parker (retired), 3rd ditto.

2nd Division: C. L. Robinson, 92—18—74; A. Berry, 90—16—74; and S. Tyldsley, 92—18—74, who tied for the Partington trophy and replica and prizes.

Play off over 9 holes resulted in S. Tyldsley, 51—9—42, winning the trophy and replica, followed by A. Berry, 51—8—43, 1st prize; C. L. Robinson, 58—9—49, 2nd ditto; J. H. Robinson, 93—18—75, 3rd ditto.

The prizes were as follows:—1st Division: 1st, entree dishes, presented by Mr. Chas. A. Stead; 2nd, cut glass spirit decanter, Mr. J. Beswick; 3rd, golf club, The Society.

2nd Division: 1st, cut glass flower vase, presented by Mr. J. B. Browne; 2nd, gold eversharp pencil, Mr. F. Jucker; 3rd, golf club, The Society.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6
Three Insertions	3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Per line	1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58 Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Telegrams: Stonhill, Lud, London.
Telephone: 2439 Holborn.

Situations Wanted.

FIRST-CLASS CHROMO and COMMERCIAL POSTER ARTIST open to undertake Work by the Hour or Piece for firms needing temporary assistance.—Wood, 61, Mayfield-road, Becon near Ilford. 14619

READER wants Sit.; Medical, Magazines or General.—L., 67, Durban-road, Beckenham. 14618

Agencies.

RELIABLE DUTCH WHOLESALE HOUSE, in close contact with first-class Mills, with important connections in all kinds of Boards, desires to appoint AGENTS (well introduced) for London and also the country, to visit consumers of Dutch Strawboards, Mounting Boards for Picture Frame Makers, also Finished Passepartouts.—State full particulars, terms, etc., to Box 14622.

Machinery for Sale.

DEMY FOLIO BREMNER WHARFEDALE, with Flyers, in good condition.—J. Travis, Ltd., 4, Market-place, Burslem. 14606

FOR SALE, Quad Demy DIRECT ROTARY LITHO MACHINE, by Geo. Mann and Co., Ltd.; very good condition.—Apply, Chorley and Pickersgill, Ltd., The Electric Press, Leeds. 14623

VICKER'S BOX STITCHER (Power), 13-in. arm; warranted good order; £35.—Caxton, 74, York-street, Glasgow. 14625

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Business for Sale.

BRIGHTON. — PRINTER'S and STATIONER'S BUSINESS in the centre of town to be sold by order of liquidator; double-fronted shop and upper part; long lease; turnover last year nearly £5,000; books kept; price £750 subject to Assets, Machinery, Plant and Stock being taken at valuation; fine opening for energetic man.—Reason and Tickle, 31, Queen's-road, Brighton. 14624

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

THURSDAY, MAY 14, 1925.

British Empire Exhibition.

THE printing and allied industries are taking a much smaller part in the British Empire Exhibition at Wembley this year than last. Apart from Messrs. Waterlow and Sons, who have a working exhibit, and another firm, who show specimens of printing, the interest of the craft is practically confined to actual work for the Exhibition. It is hoped there will be a good deal to be done in this connection. Certainly the amount of printing required will not be so large as last year. To begin with, the catalogue is not nearly of the same dimensions, and with a smaller number of exhibitors, the distribution of literature will be correspondingly less. Nevertheless there must of necessity be a considerable demand for paper and print in a variety of ways which would not arise without the Wembley activities, and that is so far to the good. No doubt the Printing Exhibition at Islington this year has had something to do with the small representation of paper and and print. While, of course, printers are naturally most concerned with the display at the Agricultural Hall, manufacturers and suppliers of paper find their centre of attraction where the main consumers of their wares are to be found. So, one way and another, there is much stirring in our particular trade circles, and if only business in general would begin to move, the outlook should be distinctly encouraging.

Standardisation of Paper.

AN interesting development in the movement for the standardisation of paper eman ates from the office of the London Master Printers' Association. Members of the Association have been circularised with a view to getting their signatures appended to two declarations. In the first the master printer is asked to declare himself in favour of the principles of standardisation of paper, as approved by the Federation of Master Printers, and undertakes to give preference, when purchasing paper, to those mills and dealers in paper who have adopted this standardisation. The second declaration which is submitted for the signature of the master printer, it is suggested, would assist the campaign for standardisation, and in this declaration the member signing promises, when ordering papers and boards for general requirements, to order them under the approved methods of standardisation. The secretary of the London Master Printers' Association (Mr. W. Whyte), in a covering letter, states that although a large number of replies have been received in response to previous appeals, it is necessary to have a fully representative body of opinion in order to impress upon the paper trade organisations the necessity for this reform, particularly in view of the action likely to be authorised at the annual meeting of the Federation this week. The proposals, it is added, have already been approved by all the London district associations and subsequently by the Central Council. The considerations which have prompted this action are that paper standardisation will eliminate errors in calculation, simplify the keeping of stocks and records, reduce the varieties of stock kept by paper dealers, etc., and, therefore, reduce the cost of paper in various ways.

Industrial Problems.

TRADE depression and the extent of unemployment are at last beginning to awaken interest in responsible quarters. Existing conditions throughout the country are demoralising alike to the nation as a whole and to individuals. One of the worst features is the encouragement of idleness through the dole. How far that system is undermining the strength and independence of the people is not yet realised; but it is surely sowing an ill wind. It has been left to Sir Alfred Mond to propound a scheme under which recipients of the dole shall be made to do some work. There should certainly be a return for the assistance given from the public purse, and perhaps Sir Alfred's proposals may meet the case. At any rate action needs to be taken and that quickly, so that the inroads of the canker may be stayed. A Cabinet committee has been appointed to investigate the question of trade depression and various organisations are deliberating on the problem, including the Industrial Institute, which has issued an important memorandum.

Prices and Trade Fluctuations.

AMONG the suggested directions of inquiry put forward by the Institute is the possibility of co ordinated action as between manufacturers and distributors. Inquiries along these lines would raise, among other questions, the possibility of the control of trade fluctuations by financial control of the price level. Price cutting is a greater evil than many people imagine. It is often resorted to either for want of thought or out of desperation. Instead of helping trade, however, it merely accentuates the difficulty, for buyers immediately think they present a weakening market and naturally postpone placing orders. Moreover, a cut price only invites lower prices from a competitor, so that the remedy is far worse than the disease. In these circumstances a little courage and patience are needed.

MESSRS. THOMAS AND GREEN, LTD., have acquired the old-established papermaking business of H. Allnutt and Son, of Lower Tovil Mill, Maidstone, who have been papermakers since 1750. The mill makes speciality cover papers, sensitised cheque papers, book-end papers (Cobb's demys), art mounts and crayon papers, marbled papers, T.S. sampling papers, seidlitz blues and a wide range of filter papers. One of the most important features of the mill is the large variety of mottled effects which can be supplied for making orders, and these, with or without special finishes, offer a very fine range of papers "out of the ordinary." The business will be carried on under Allnutt's name.

Personal.

MR. ARTHUR WIGLEY, proprietor of the Waverley Press, Woodhouse, Leeds, has been elected president of the Leeds and District Master Printers' Association; Mr. Robert D. Chorley, of Messrs. Chorley and Pickersgill, Ltd., the Electric Press, Leeds, will be vice-president; and Mr. H. Wood, of Messrs. E. J. Arnold and Son, Ltd., treasurer.

MR. FRANK S. ROBERTS, formerly Labour Secretary to the Federation of Master Printers, and now manager of the composing departments of the Allied Newspapers, Ltd., at Manchester, has been appointed a member of the board of management of that concern.

A PLEASANT little meeting took place in the manager's room, Messrs. W. P. Griffiths, Ltd., Prujean-square, on the 27th ult., when the fellow-overseers and staff of Mr. J. Lowe took the opportunity of expressing their esteem by presenting him with a gold albert, on his retirement from the printing trade. Those working under his direction had previously shown their appreciation by the gift of a silver rose-bowl.

MR. WALTER LINDLEY-JONES, O.B.E., and Mr. F. Hilary Jones, of the *Mercantile Guardian*, have returned by the C.P.S. "Montcalm" from their round-the-world tour of inquiry into British trade opportunities in oversea markets.

THE RT. HON. E. HILTON YOUNG, M.P. for Norwich, and formerly Financial Secretary to the Treasury, has been appointed editor of the *Financial News*. Mr. Young was from 1909 to 1911 assistant editor of the *Economist*, and subsequently financial editor of the *Morning Post*.

MR. H. C. GRIMWADE, of the Dean Forest Newspapers, has been elected president, and Mr. H. G. Davey, of the Worcester *Journal*, vice-president, of the Three Shires Newspaper Society.

AT the annual meeting of the Lancashire, Cheshire, and Derbyshire Federation of Newspapers held at the Midland Hotel, Manchester, Mr. W. H. Andrew, principal of the firm of Messrs. J. Andrew and Co., the *Reporter*, Ashton, was re-elected president for the third year in succession; and Mr. T. L. Whitehead, managing director, *Bury Times*, was re-elected vice-president.

MR. A. G. BIRNAGE has succeeded the late Mr. Percy Livingstone Parker as editor of *Public Opinion*.

MR. F. H. GREENHALGH is resigning his position as manager at Hollins Mill, Darwen (Wall-Paper Manufacturers, Ltd.), to take over the management of the Falls Paper Mill Co., Ltd., Milnthorpe, Westmorland. Mr. Greenhalgh, who is well known as a very active member of the Technical Section and the present chairman of the Manchester Division, will carry with him the best wishes of his many friends in the trade for his success and welfare in his new sphere of labour.

LORD OXFORD AND ASQUITH presided over the 62nd annual dinner of the Newspaper Press Fund, at the Hotel Victoria on Thursday evening.

VISCOUNT BURNHAM (president of the Fund) was one of the speakers, and those present included Lord Riddell, Sir Frank and Lady Newnes, Sir Adolph and Lady Tuck, Sir Edward and Lady Iliffe, Sir Howard and Lady Spicer, Mr. Arthur L. Woodhead (president, Newspaper Society), Mr. Frederick L. Armstrong (secretary, Newspaper Society), and Mr. and Mrs. Valentine Knapp.

MR. PETER B. M. ROBERTS (chairman of the council), who proposed the health of the chairman, announced that the total sum realised by the festival was £13,500.

THE Newspaper Society, at its annual meeting held in London on the 6th inst., unanimously elected Mr. Arthur L. Woodhead, of the *Huddersfield Examiner*, as its president for the ensuing year, in succession to Mr. William Astle, of the *Stockport Advertiser and Cheshire Daily Echo*.

MR. ROBERT J. WEBBER, of the *Western Mail*, Cardiff, was elected senior vice-president, and Mr. H. Godwin Chance, of the *Gloucester Journal*, junior vice-president.

MR. VALENTINE KNAPP, of the *Surrey Comet* Kingston-on-Thames, was re-elected treasurer

ON account of ill health, Mr. William Darwen has resigned his office as joint managing director of J. S. Darwen and Co., Ltd., but retains his seat on the board as a director. Mr. A. C. Ames and Mr. H. F. Smith continue to act as joint managing directors.

MR. W. CHALLINOR, vice chairman of the Star Paper Mill Co., Ltd., Feniscowles, has been elected to succeed the late Mr. J. Ely Jepson as chairman of the company.

MR. C. NEWELL, C.C., was last week installed in the office of Past-Assistant Grand Director of Ceremonies in the Supreme Grand Chapter of Royal Arch Freemasons at Freemasons' Hall.

MR. HARRY LING, playing in the Gold Badge Competition of the London and Southern Counties' Bowling Association last week, beat Mr. Tom Potts, of the Harrow Club, an English international player. The result was 21 points to 17.

AN interesting paper trade wedding was solemnised recently at Aylesford, when Mr. John Ernest Grove, a papermaker at the Aylesford Paper Mills, was married to Miss Winifred Rose Smart, of Aberdeen.

THE bridegroom's father is foreman at Aylesford Paper Mills, and the bridegroom himself, subsequent to serving in the R.A.S.C. during the war, worked at the Imperial Paper Mills, Gravesend, and the Donside Paper Mills, Aberdeen.

Death of Mr. M. H. Pirie.

The death took place at 91, Kensington-court, London, on Thursday, April 28th, of Mr. Martin Henry Pirie, after a long illness. Mr. Pirie, who was in his 77th year, was the second son of the late Mr. Alexander Pirie, of Stoneywood, Aberdeen. He was for many years actively engaged in the management of the firm of Alex. Pirie and Sons, Ltd., paper manufacturers, Stoneywood, and lived most of his life at Stoneywood. He retired from active participation in the business about three years ago and gave up his directorship. He had previously been residing in London for about 20 years, but continued, during the period of his directorship, to pay frequent visits to the works at Stoneywood in discharge of his duties as a member of the board. He is survived by Mrs. Pirie and two sons, the elder son being Major H. V. C. Pirie, who is now engaged in farming in Kenya, East Africa, and the younger is Commander W. B. Pirie, a director of Alex. Pirie and Sons, Ltd.

IMPORTS of paper, paper manufactures and printings into Esthonia during 1924 were of the value of 134 million Esthonian marks, while exports reached a value of 646 millions. In the previous year the corresponding figures were: Imports, 239 millions; exports 590 millions.

SHANGHAI Paper Importers' Association is the title of a new organisation which has been formed at Shanghai. The rules and bye-laws were confirmed at a meeting held on March 4th last.

THE wages question is causing some trouble in the paper mills of Denmark, as there is no existing contract like those of Sweden and Norway. The workers demand increases of as much as 20 per cent.

FIGURES are published relating to the imports into the Australian Commonwealth during the fiscal year ended June, and from these it is seen that Sweden is sending an increased volume of paper.

SOCIETE DES PAPETERIES DE ST. LO has been formed in France for the manufacture and sale of all kinds of paper, especially packing, with a capital of 2,000,000 francs.

THE United Paper Mills Co., of Copenhagen are paying a dividend of 10 per cent. (7 per cent. last year).

CONSEQUENT upon the death of their representative, Mr. Stanley Voigt, Messrs. Yates Duxbury and Sons, Ltd., have entrusted their agency for the Lancashire area to the care of Messrs. Norbury Bros., 33, Brazennose-street, Manchester. The Birmingham and Midlands are still in the hands of Mr. C. Eaton, and London and the South in those of Messrs. Corke, Sons and Co.

MR. ERIK FERNSTROM announces that owing to the development of his business in other markets necessitating his undivided attention abroad, he has decided to dispose of his London connection, the goodwill of which has been acquired by Mr. K. Quiney, who has managed his London office for the past three years, and has entered into partnership with Mr. Reginald C. Ridley, of 20/21, Queenhithe, E.C.4, under the style of Ridley, Quiney and Co.

DIVIDENDS AND REPORTS.

ILLUSTRATED LONDON NEWS AND SKETCH.—Dividend of 6½ per cent. on preference shares and 17½ per cent. on ordinary shares for year; £18,602 to reserve, making £86,687; £2,632 forward. (Ordinary dividend for 1923 was 9½ per cent.).

DAILY MIRROR NEWSPAPERS.—Report for year ended February 28th, 1925, shows profit, after placing £20,000 to reserve (which now stands at £60,000), amounting to £268,893. Warrants have been issued for payment of interim and final dividends due to preference shareholders and for payment of dividends to the ordinary shareholders to February 28th last. It is proposed to carry forward the balance, £23,266. (Profit for previous year, after placing £20,000 to reserve, was £256,049).

WYMAN AND SONS.—Net profit for 1924, after providing for depreciation, directors' salaries and all charges except interest, is £62,270, plus £9,546 brought in, making £71,816. Directors propose to add £12,000 to reserve and pay a further 12½ per cent. on ordinary shares, making 20 per cent., less tax, for year, leaving after providing for directors' additional remuneration, approximately £19,000, subject to corporation profits tax (half-a-year), income-tax and possible adjustments. Report states reserve now amounts to £52,000. This has all been expended in paying off mortgages on premises and in additions to freeholds and plant and machinery. It may later on be desirable to capitalise part of this reserve.

NEW COMPANIES.

RICHARD WHEATLEY BROTHERS AND CO., LTD.—Capital £5,000, in £1 shares; to adopt an agreement with R. Hutton and R. A. Wheatley, and to carry on the business of gear cutters, printers' and mechanical engineers, etc. Private company. Directors: R. Hutton and R. A. Wheatley. Registered office: 2, Holborn-buildings, E.C.2.

FEDERATED ADVERTISERS' BUREAU, LTD.—Capital £6,000, in 4,500 10 per cent. cumulative participating preference shares of £1 and 30,000 ordinary shares of 1s.; to adopt an agreement with W. Rudd and to carry on the business of printers, lithographers, publishers, agents and contractors, billposters, stationers, booksellers and general merchants, etc. Private company. Subscribers: P. V. P. Stone and Gertrude A. Mears. Solicitors: Arthur Veasey and Co., Aldwych House, Aldwych, W.C.2.

PASTIMES AND PLEASURES (MANCHESTER), LTD.—Capital £1,000, in £1 shares; to adopt an agreement with G. F. Longden, Rene Longden and F. W. Harland-Edgecumbe, and to carry on the business of proprietors and publishers of newspapers, journals and other literary works, booksellers, printers, advertising contractors and agents, etc. Private company. Subscribers: E. Whiteley, G. F. Longden and Mrs. R. Longden. Registered office: 30, Blackfriars-street, Manchester.

RIVER PUBLISHING CO, LTD. — Capital £500, in £1 shares; to acquire the business of a publisher of the *Packing Gazette* carried on by Maxwell Raison. Private company. Directors: M. Raison and H. J. Rudgley. Solicitors, Durham Brothers, Ltd., 87, Moorgate, E.C.2.

L. LACROIX FILS (LONDON), LTD.—Capital £1,000, in £1 shares; to transact all kinds of agency business, and to carry on the business manufacturers and importers of and wholesale and retail dealers in cigarette paper and all other kinds of paper and cardboard, tobacco, etc. Private company. Subscribers: W. P. Solomon and Sarah E. Solomon. Registered office: 117, Kingsway, W.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HUDSON AND KEARNS, LTD. (London).—Satisfaction to the extent of £6,000 on April 1st, 1925, of first debentures dated July 11th, 1922, securing £105,000.

F. BREED AND SON, LTD (Printers, etc., Hemel Hempstead). — (A) mortgage on 40, Alexandra-road, Hemel Hempstead, Herts, and land adjoining, dated April 8th, 1925, to secure £1,000. Holder: Mrs. C. S. Maskew, Finedon Hall, Northampton. (B) Also mortgage of even date to secure £300, charged on above property and subject to above mortgage. Holder: Miss E. C. Tyrrell, 36, Barrington-road, Brixton, S.W.

FARRINGDON PRESS, LTD. (London).—Satisfaction in full on December 31st, 1923, of mortgage dated April 11th, 1922, securing £3,000. (Notice filed May 1st, 1925).

MIDLAND DAILY TELEGRAPH, LTD. (Coventry).—Particulars filed of £50,000 debentures authorised April 16th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

FRED FORD AND CO., LTD. (printers, etc., Exeter).—Second debenture dated April 23rd, 1925, to secure £300, charged on the company's undertaking and property, including uncalled capital. Holder: J. A. Philo, 16, Glaucus-street, Bow, E.3.

GEO. W. LOCKWOOD, LTD (manufacturing stationers and printers, etc., Manchester).—Debenture dated April 24th, 1925, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Miss S. A. Lockwood, 21, Swinbourne-grove, Withington, Manchester.

ASSOCIATED PAPER MILLS, LTD.—Trust deed dated March 31st, 1925, to secure £250,000 debenture stock and a premium of 2 per cent. on redemption, charged on properties in Manchester, Macclesfield, Bollington and Maryhill, Glasgow, certain water rights and the company's undertaking and property, present and future, including uncalled capital. Trustees: G. M. Salisbury, Brown-street, Salford, and W. E. M. Mainprice, 8, John Dalton-street, Manchester.

BANKRUPTCIES, etc.

Re EDGAR RIPLEY.—A meeting of the creditors of Edgar Ripley, 2, The Brownings, Hipperholme, in business at Smithy Carr-lane, Brighouse, as a printer and lithographer, was held at the offices of the Bradford official receiver recently. Debtor's statement of affairs showed a deficiency of £604 6s. 11d., the causes of failure being alleged by him as "bad trade, keen competition, and bad debts."

Trade Notes.

RECEIVING orders made during the week under the Bankruptcy Act, 1914, include one concerning J. W. Hutchinson, residing at 16, West street, Greaves, Lancaster, Lancashire, and carrying on business in co-partnership with F. Hutchinson, under the style of John Kellett, at 15, King-street, Lancaster, commercial and general printer; also one concerning H. Burr-Perrett, Donhead Saint Mary, Wilts, stationer.

THE Miehle Printing Press and Manufacturing Co., Ltd., have moved to more commodious offices, having showroom adjoining, at 2-3, Salisbury-court, Fleet-street, London, E.C.4. The American Miehle Co.'s automatic presses are being installed in the showroom, and printers' inspection of them will be welcomed.

MESSRS. W. H. SMITH AND SON, Liverpool, have just completed a fine new up-to-date and comprehensive warehouse, known as Hornby House, Tithebarn-street, and its opening was celebrated on Saturday night by a dinner, attended by the Liverpool staff of the firm, at the Exchange Station Hotel. Mr. C. H. St. John Hornby occupied the chair, and Sir William Acland proposed the toast of "The Liverpool House," which was responded to Mr. W. Whitby, manager of the Birkenhead sub-branch. The new premises have an exceptionally fine news despatch-room, and there is garage accommodation for fifty delivery vans. Besides the departments for newspapers, magazines, and books, there are others for stationery and for that great variety of goods with which the name of W. H. Smith and Son is associated. The comfort of the staff is assured in dining and rest rooms.

THE Co operative Productive Federation is to launch a new monthly publication in September, under the title of the *Co-operative Productive Review*, the official organ of the co-operative productive societies.

THE *Chester Chronicle* this month completes a century and a-half of existence. It was founded in May, 1775, by Messrs. Poole, Barker and Co., and a facsimile of the front page is reproduced in a special anniversary issue.

A SPECIAL jury in Mr. Justice Sankey's Court awarded £1,167 to Mr. George Smith, a journalist, who brought an action to recover damages for personal injuries received in a collision between his motor-cycle and a motor-car belonging to Lord Belper.

THE death occurred at Newton Abbot, on Thursday, of Mr. Albert Edward Theodore Mortimer, a member of the firm of Messrs. Mortimer Bros., printers, proprietors and publishers at Newton Abbot and Totnes, of the *Mid-Devon Times*, the *Totnes Times* and the *Western Guardian*.

ON Saturday the *Daily Telegraph* editorial staff held their annual dinner at the Criterion Restaurant, Piccadilly, Mr. A. E. Watson, the managing editor, being in the chair. The occasion served as a reunion with several retired colleagues, and the guests also included Lieut.-Colonel E. F. Lawson, D.S.O., and Mr. Aaron Watson. Viscount Burnham was unable to be present.

THE employees of the Wigan Printing Co. together with a few friends, were entertained to a tea and social on Tuesday evening of last week by Mr. W. Taylor on the occasion of his retirement as director and secretary of the company.

THE London Central Districts Master Printers' Association will hold its seventh annual general meeting next Monday, May 18th, in the Board Room of the London Master Printers' Association, 7-9, Old Bailey, E.C.4, at 6 p.m. prompt, when, it is stated, "a matter of vital importance to the trade will be discussed."

THE next meeting of the South-West London Master Printers Association will, in view of the Whitsuntide holidays, be held on the first Thursday in June (the 4th) instead of the first Tuesday.

HUSSEIN JAHID BEY, the editor of the Turkish paper *Tanin*, and the best known journalist in Turkey, was sentenced at Angora on Friday to banishment for life.

THE Roach Bridge Paper Co., Ltd., Samlesbury, have appointed Messrs. P. Garnett and Son, Ltd., Otley, Yorkshire, as their agents for the Yorkshire wool combing district.

A Unique Item at the Exhibition.

The "Printex" Negative Printer.

Of great interest to the lithographic branch of the printing trade, and unique of its kind amongst British manufactures, the just completed "Printex" Negative Printer is an item at the Exhibition that calls for some special notice in our columns.

It will be understood that this machine, illustrated herewith, is designed for the production of photo-litho plates by the multiple printing down upon metal of a photographic

negative - either a single negative or a multi-negative—the commonly used method of hand transferring being dispensed with. This machine differs from most other machines that have been built to do the same work, inasmuch as the sensitive metal plate itself remains in one fixed position, and the negative, together with its lighting device, travels over the full range of the plate. In the illustration the arc lamp is seen in the immediate foreground, being suspended from a projecting arm, which holds it in position in front of the negative carrier, which latter is adapted to be moved both vertically and horizontally on the step-and-repeat principle. The devices for holding and supporting the metal plate are at the back of the machine.

The machine will take almost any plate from 65 by 49 in. downwards, being provided with an adjustable false bed, which will enable most makers' plates to be held—namely, "Ensign," Mann, Harrild, Linotype and Machinery, Furnival, Harris, Potter, Voirin, etc.—that is to say, plates as used in all the various offset machines mentioned can be printed on.

In this machine great attention has been given to the way in which the metal sensitive plate is attached in the machine to render it tight and taut and to do this in an expeditious manner. We are assured that in practice a metal plate can be placed into the machine and eight exposures of five minutes or less can be given, the images being printed in position on to the metal with just as much exactitude as the "Lithotex" Step-and-Repeat multi-negative maker affords—all well under one hour. The spaces between designs can be guaranteed as absolutely uniform, or designs can be so accurately joined up as to show no join at all, and thus make one continuous design.

For the stepping process use is made of large dials and discs, the divisions of which are actually one-thousandth of an inch, instead of one-five-hundredth, as on the "Lithotex" Step-and-Repeat multi-negative maker, *i.e.*, the mechanical movements actually work to one thousandth of an inch.

So far as contact is concerned, this is obtained by an ingenious system of pressure which ensures contact all over negative plate, which may be anything up to 20 by 16 in. in size, and may be on glass, on paper or on film. The fact that no vacuum is required for compelling the metal surface and negative into exact contact is regarded as a triumph. Use is made of a series of pressure gauges, which take up any equality of the plate or negative. If the negative glass were 1-16th in. less on one of its areas than on others, then the pressure gauges would take up this 1-16th in. If the negatives are to be printed on glass, then they should, of course, be on good negative glass—not curved in any way, and thus subject to great undue strain and possible breakage—but there is no necessity to use any special heavy negative glass or for the glass to be bevelled or specially prepared. Thus ordinary good glass negatives can be printed down on to metal, and this in any required position.

The placing of the negative into its carrier, the squaring up and positioning of same, and the indicating of exactly where impressions fall—all has been carefully worked out and provided for. There is nothing at all that is not hand manipulated, and while a small motor has been attached to simplify the method of raising and lowering the combination back carrying the metal plate, yet this movement also can be done by hand if desired.

The machine is best operated by two persons, say, a man and a boy, one making the successive manipulative movements, *i.e.*, attending to the stepping, while the other sees that the contact is on or off as and when required.

When the negative is in contact a warning device lights up near the manipulative dial wheels, so that the operator can see at once that contact is being made. At the same time as contact is made the arc exposure light is lit up and the shutter is opened, thus exposing the negative to the metal plate. During this time an electric buzzer also warns the operator of the time of exposure, and on the automatic closing of the shutter the buzzer ceases at the same moment as the exposure ends. This warning device is necessary to obviate all danger of the machine being actuated during times of exposure.

To many it will appear that the "Printex" Negative Printer is unnecessarily heavy, but one has to take into consideration the precision required, and this over so large an area, and the solidity and the prevention of any slip or side play. The makers assure us that the machine as it stands is not unnecessarily heavy, nothing unduly massive having been put into it.

In this appliance very special attention has been given to the necessity of taking out one negative and replacing it with another negative with the least loss of time. The operator should have a lay-out from the office, the office itself working out the mechanical step necessary. This is the procedure usual in at least one establishment in the States where the "Lithotex" Step-and-Repeat machine is used. The office itself gives out the exact size of subject, makes up a lay-out sheet, and gives the mechanical step, so that all the operator has to do is to look at his lay-out and work accordingly. The practice therefore would be that the operator having a number of plates to make of varying subjects would have his make-up sheet pinned beside the machine, and would make his steps for each colour exactly according to the lay-out. This would obviate a lot of calculation, putting, of course, a little calculation upon the office staff who send out the lay-out.

Christmas and New Year Cards.

The 1925-6 Tuck Collection.

Opportunity has again been given us of inspecting a new collection of the Christmas and New Year's cards which the house of Raphael Tuck and Sons, Ltd., provides annually in such rich profusion, and once again the quality and wide variety displayed are such as to suggest a free use of superlative terms in the writing of a descriptive note upon the latest effort of "The World's Art Service."

"Pot Pourri" Series.

This year, as usual, the Royal Family has honoured Raphael House with commissions, and again the public is able to purchase a series of reproductions from the beautiful originals of the Royal cards. The designs, artists' work, and execution generally are very fine in every instance, varied as the subjects are. His Majesty's depicts Queen Elizabeth's opening of the Royal Exchange in 1571; Her Majesty the Queen's card shows Queen Philippa of Hainault (wife of Edward III) visiting the

"Hand-Printed Facsimile" Series.

cloth manufacturing colony which she established at Norwich; the Prince of Wales' card pictures the landing of Sir Humphrey Gilbert at St. John, Newfoundland, thereby founding the first British colony; whilst the cards for Queen Alexandra and Princess Mary contain charming garden views.

To touch briefly on just a few of the numerous series represented in the sample books, we may mention first the "Pot Pourri" series, in which use is made of the Tuck patent method of scenting cards by embodying actual flower petals. This series is wonderfully popular, especially with ladies, and every year sees increased production and increased sales. The "Satin Medallion" series introduces pictured satin inlays, which are an innovation of much promise. One is impressed, too, by the beautiful effects and the wide range of cards (even to the cheapest) produced by such expensive processes as hand painting and hand printing, the "Hand Printed Facsimile" series being especially artistic. The "Pen Point" series is another new departure, novel pen-etched shading effects being produced. New and old series combine to form a collection of immense variety, and marked by uniform excellence of design and production. Great care is again bestowed in the choice of wording and lettering, whilst the ribbons—specially dyed to Messrs. Tuck's orders—are chosen with the nicest taste. Retail prices of the Tuck cards range from 7s. to 1d. each.

Once again Messrs. Raphael Tuck and Sons, Ltd., prove by their products that they occupy a unique position in the greeting card section of the industry. Only the immense resources of such a firm—with its old-established connections in the spheres of art, manufacture and distribution, its world-wide organisation and the immense demand which its past successes have built up—could possibly put upon the market a collection so admirably and so expensively produced, and yet at the same time so moderately priced. One is impressed by the fact that the retailer has in Raphael House a source of supply almost unlimited in its ability to meet the demands of the customer, and capable of providing goods of a quality calculated to stimulate trade to the utmost.

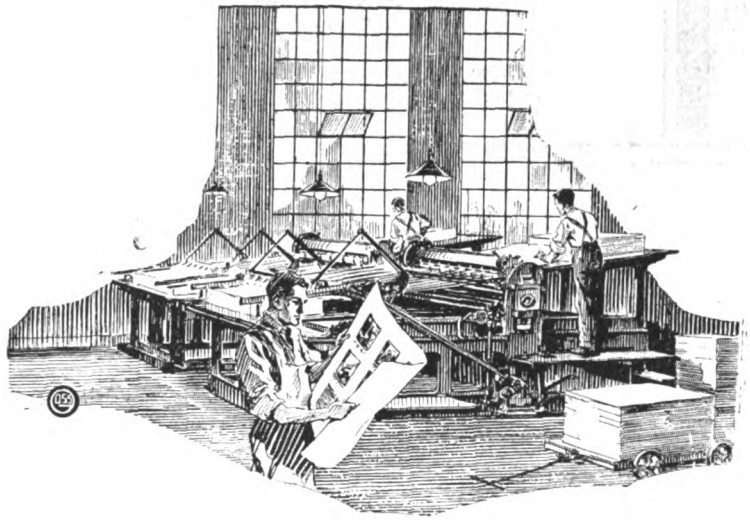
Swiss Paper Slump.

The Swiss paper industry has for some months been in a very critical condition. The home market has dwindled considerably. The protection of national industry seems a complete failure, as the imports from Austria and Germany are considerable and disturb the markets. Wages are 30 to 50 per cent. less in Germany and Austria and the working day is more than eight hours in these countries, sometimes attaining 12, so that Swiss mills cannot compete. Swiss exports, especially news-print and printing paper, are also declining owing to the high prices of Swiss paper in the world markets.

A SWEDISH papermaking company is about to build a paper mill at Pabras in Greece, aided with Greek capital. Ordinary writing paper and board will be made.

Printers and Their Paper.

The addresses recently given before the members of the Technical Section of the Papermakers' Association by Mr. J. R. Riddell and Mr. W. J. Pollock, who passed some criticisms on paper from the printers' point of view have given manufacturers much food for thought. The discussion might well be carried a good deal further. Mr. J. Barcham Green, in the *Tovil News*, sums up the results of the meeting as follows:—



The printers complain that when they get paper it contains specks and holes, and in news-print bad joins. In other words, the paper is not properly sorted. The papermakers' reply is that as printers are always trying to substitute something cheaper to capture the order off their neighbouring printer the papermaker has to sacrifice something, and the sorting, being costly, is the first thing to suffer. It appeared from the discussion that it would probably pay printers handsomely to give a wee bit more for the paper and get it really thoroughly sorted.

What the papermaker might learn from this discussion is the outstanding fact that it is a fatal thing to keep on trying to produce something cheaper, it being much more satisfactory to be able to go to the printer and say: Here is a paper which is much better sorted and more suitable to your work than what you can get elsewhere." If the papermakers would only talk quality more and price less it would be better for everybody.

Another good suggestion was that papermakers should actually have their paper printed by the process for which it is actually made, and then put a printed sample on the top of each ream, explaining that the paper is made for that particular process, and that is the result that can be actually obtained.

The other suggestion that papermakers should pool their experience and exchange the formulæ of their furnishes, and in fact generally co-operate and exchange ideas is the soundest proposition we have ever heard put forward at a meeting.

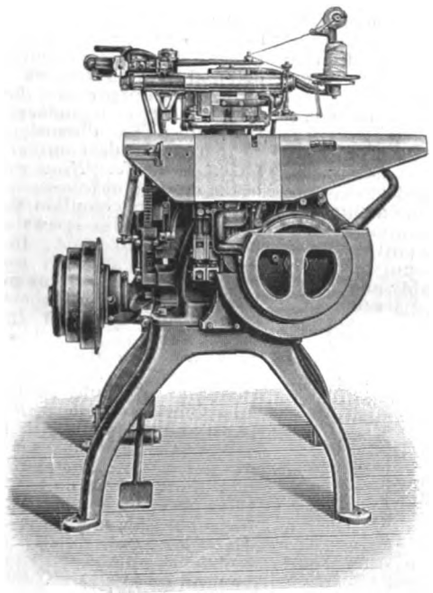
If considerable good does not come out of this discussion, we think that the papermakers generally are very much to blame.

Good Inks mean Better Production

LETTERPRESS
TRICHROME
PHOTOGRAVURE
LITHO
OFFSET-LITHO
Etc., Etc.

MAXIMUM Production—the secret of running machine-rooms **profitably**—depends largely on the use of inks that will enable the presses to run at their highest possible speeds without sacrificing the quality of the product.

L & B Inks are made to **help** production.



No matter how difficult the subject, they will print it cleanly, easily and with full density of colour **at the maximum speed.**

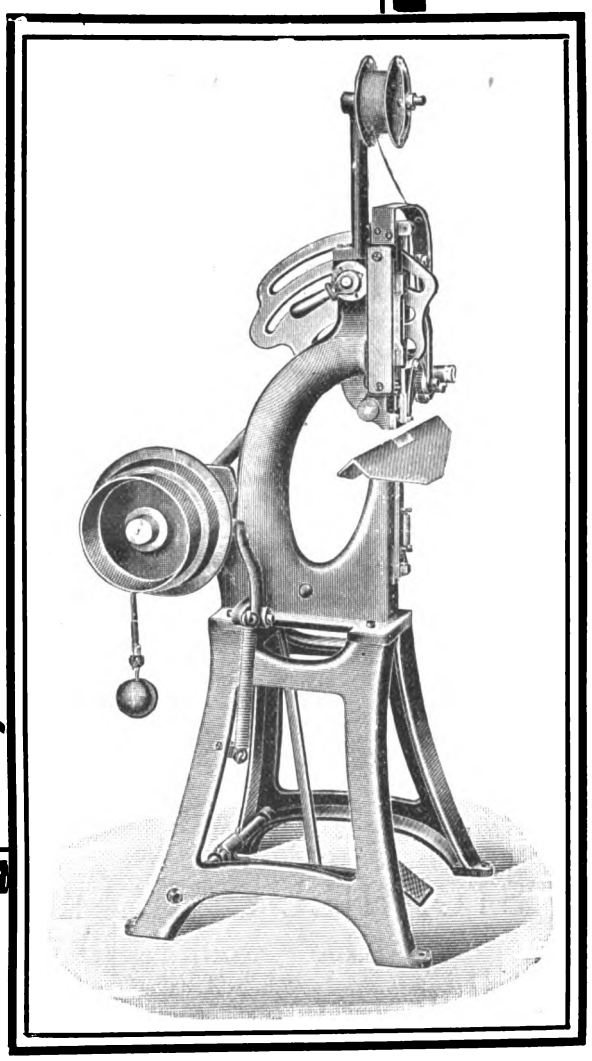
rooms at 12, CITY ROAD, LONDON, E.C.1, e on view May 16–May 30.

Wire, Thread, Webbing, Cut-Cloth, Tape, Cord, Glue, Staples Supplied from Stock.



NO. 38½ MACHINE.

The machine works with double thread and no cuts are made in the section. Tape, 1/8 or ¼ in. cord or canvas can be used if required. End sections are securely fastened by thread, and do not require pasting. The distance between the stitches, as well as the length of same, can be very easily adjusted. The needles are straight and strong—therefore cheap. Strong construction. Simplicity of adjustment, and minimum upkeep.

NO. 23 MACHINE.

The machine will stitch single sections through the fold, or bind books of several sections by stabbing them through the side. All gauges of wire from 30 to 24. Only one adjustment for various thicknesses. The wire is supplied on spools. Also machines of the same type for stitching work up to ½-in. thick.

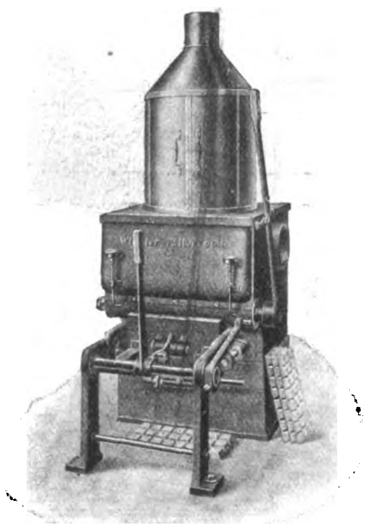
A Patent Automatic Ingot Caster.



In ordinary service, type and stereo metals are constantly cast, subjected to considerable mechanical stresses, and then re-melted, the whole cycle of operations being repeated daily for long periods The conditions of re-melting often leave much to be desired; scraps of "foreign" metals may be accidentally introduced, whilst the tin-antimony compound tends to rise to the surface in the melting pot. Through wasteful over-heating, stirring, and skimming of the metal while it is too hot, and by insufficiently protecting its surface from the colder atmosphere, the lighter compound readily oxidises, forming dross, which has to be skimmed off, thus gradually impoverishing the alloy. This results in a serious loss in dross and in an excessively high bill for renovating metal.

In the "Winkler" patent automatic ingot caster, special means are taken to reduce these losses. The metal pot has at its lowest portion an outlet slit, which is opened and closed by a tapered plug valve extending over the whole width of the pot and provided with twin bevels. When the outlet-slit is opened the metal enters by gravity into the water-cooled ingot moulds, which are thus directly connected with the metal pot. Consequently only the clean metal is cast, from the bottom of the pot, under the natural pressure of the head of metal, all dirt and impurities remaining on the surface.

As soon as all the constituents of the metal are in complete solution the dirt and impurities rise to the surface and are skimmed off. The water-jacketed shell containing the ingot moulds is pushed against the bed by means of the front lever. By actuating the second lever the valve is opened, allowing the metal to flow into the automatically water-cooled moulds. After allowing a few seconds for the metal to solidify, the valve is closed again, thereby severing the freshly-cast ingots from the head of metal, the opposite edges of the bevel in the valve plug and of the outlet-slit in the pot being shaped as cutters. By actuating the front lever the shell slides back to its original open position, and the finished ingots are automatically ejected.

The surface of the metal is kept in a non-oxidising atmosphere, which reduces the formation of dross to a minimum. It has been proved in practice that this effects a considerable economy in metal.

The sliding door of the hood covering the melting pot remains closed, and the unhealthy

fumes from the metal are carried off through the flue.

When the metal flows into the moulds the air is displaced and escapes through the metal in the pot, thereby acting as a natural stirrer.

The furnace can be heated by gas, coal, coke or oil. Gas heating is preferable in more than one respect, and patent burners on the "surface combustion" principle are recommended. Air and gas are correctly proportioned and thoroughly mixed prior to the commencement of combustion. This is done automatically by a surface combustion air-gas proportioner, which ensures complete and perfect combustion, without need for adjustment by the operator. The quantity of combustible mixture fed to the burners is regulated by a single valve. No flames impinge upon the pot, and an even furnace temperature is obtained by radiant heating. The fire-brick lining to the totally enclosed combustion chamber is well backed up with insulating material.

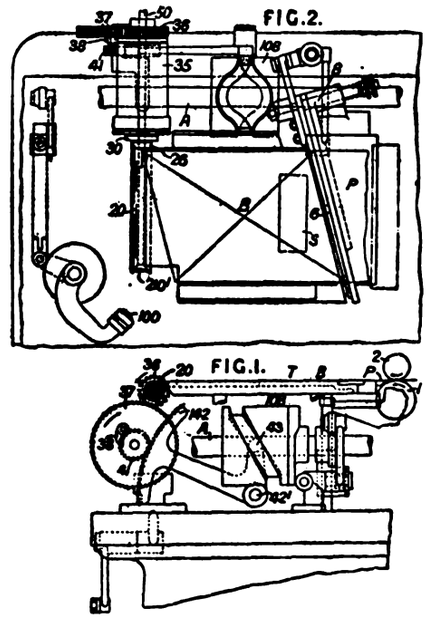
New Inventions

Multicolour Presses.

In this invention, patented by Mr. O. R. Wolf, a multi-colour or multi-impression web printing press comprises several distinct units, each unit including a printing couple and a registration roller for the web, the registration roller in at least one of the units being driven from the drive for the printing cylinders through differential gearing, the driving effect of which can be varied.

Rotary Presses; Drying Apparatus.—A web A from a roll passes through colour units B, C, D, each comprising an etched cylinder 11, a co-operating impression cylinder 12 and a heated drying drum 14, and then travels back



over these units to a type cylinder 11_c where it is printed on the other side, finally passing round a drying drum 14^c. The drying drums 14 are driven through the intermediary of variable speed friction drives.

Registering Webs.—Registration rollers 8, 19, 19^a and 1 are provided for controlling the speed of the web before the first and between the remaining impressions. The roller 8 is driven from the main shaft 67, Fig. 3, through gears 66, 65, and a vertical shaft 63 connected part way up by gearing 62, 61, 59, 58, 55 to one end 44, Fig. 4, of a differential gearing enclosed in a casing 36, the shaft 63 being also geared, at its upper end, to a shaft 72 from which the drive proceeds via friction rollers 78, friction disk 79, gears 81, 24, 25, chain 29, bevel gears 33, 34, worm 37 and worm wheel 38 to the opposite end 40 of the differential. Differential wheels 45 are mounted on a cross block fixed on a shaft 41, the extreme end of which is connected by gears 48, 49, a vertical shaft 50 and gears 53, 54 to the roller 8. The friction rollers 78 are mounted in a block 73, Fig. 3, laterally adjustable on a guide 74 which is longitudinally adjustable by means of a screw 77 to vary the position of the roller 78 and hence the speed of the disk 79 and the effect of the differential. The registration rollers 19, 19_a may be driven independently from the shaft 67 in the above manner; or, the upper end of the shaft 63 may be used to drive a lay shaft on which are mounted friction rollers 78 engaging disks 79 fixed on the shafts of the rollers 19, 19_a. The shaft 72 may be utilised to drive variable speed friction drives 78, 79 for the drying drums 14.

Paper Tubes.

Paper and like tubes having one end closed are formed from rhombic shaped blanks which are cut from an intermittently fed roll of material by a severing device disposed obliquely to the axis of the mandrel at the desired distance therefrom. The leading corner of the blank is secured to the mandrel by grippers, and after winding one end is folded in and the tube stripped off. The web of paper P, Fig. 1, is fed forward the desired amount by the intermittently driven rollers 1, 2 and a movable knife 6, Fig. 2, pivoted on the bolt 8 and operated through a system of levers by a cam on the main driving shaft A, co-operates with an edge on the table T to form the rhombic blanks B, a holding down device, not shown, being employed to hold the paper in position. A printing device may be used to imprint matter and consecutive numbers on the blanks, as at S. The leading corner of the blank B is engaged between the mandrel 20, which is supported at one end in a bearing 35, and a finger hinged within a recess in the mandrel, and held in position to grip and release the blank by a spring operated by a lever oscillated from the driving shaft. The blank is then wound on the mandrel 20, which is driven intermittently in one direction only by the gear shown in Fig. 1. A toothed sector 142 is oscillated about its axis 42^1 by a pin 43 running in an inclined circumferential slot in a barrel 108 keyed on the main shaft A, to turn the gear wheel 41 backwards and forwards. The forward motion only is transmitted to the gear wheel

37, by means of the pawl and ratchet 38, to drive the mandrel by a wheel 36 keyed to it. After winding the blank on the mandrel the gripper finger is operated to release the blank, and a brake-shoe carried on a spring arm rides upon a disc 30 and brings the mandrel to rest. The bottom of the tube is then formed by four folders cam-operated from the driving shaft A, one acting from above, another from below, and the other two from opposite sides, against the projecting end of tube A convex-headed punch 100 also driven from the driving shaft A, by a linkage, next presses in the folded end of the tube against the concave end 210^1 of an ejecting rod 50 concentric inside the mandrel 20, and forms a tight enclosure. A cam driven from the main shaft A reciprocates the ejector rod 50 through a system of levers to eject the finished tube from the mandrel when the process is repeated. The patent is granted in the name of Mr. J. E. Evans Jackson (F. Hesser).

IMPORTS of paper, printing, etc., and stationery into New Zealand from the United Kingdom during the September quarter of 1924 reached a value of £145,537. Canada's contribution was £115 195, that of the United States £11,533, Australia £7,666, and Japan £41.

MESSRS. SAMUEL JONES AND CO., LTD., are offering a large variety of fancy papers. Among a recent batch of samples are imitation gelatine, indigo leather, Parian marble, algamyn, rainbow surface, transparent cloth, book cloth, label cloth, box calico, white chromo, arts, bonds, banks, parchments, and a large assortment of non-curling gummed papers and tapes.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Paper and Print at Wembley.

In a large and handsomely printed volume, entitled, "Exhibitions and the arts of Display," Sir Lawrence Weaver, who was director of United Kingdom exhibits at the British Empire Exhibition, has an interesting note on the section devoted to paper, printing, books and maps. He writes

"The paper and printing trades give ample opportunity for attractive display, and there is in the human mind a persistent curiosity as to the fascinating mechanisms which produce the materials of learning. Moreover, printing is in itself one of the most significant and various of the decorative arts, and, above all, the art in which satisfying form and colour can be achieved in common things reduplicated an infinite number of times, yet without more cost than is necessary for the same thing ill-designed and foolishly decorated. Adequate printing exhibits, therefore, have a high educational value in forming public taste at large and in extending to other industries ideals of artistic production.

"The basis of it all is paper, and at Wembley, 1924, owing to the patriotic action of the national Papermakers Association and the machinery builders who co-operated with them a notable group exhibit was staged. A full-sized machine of the most modern type is too enormous a unit for it to be possible to find space for, and still more to organise the provision of raw material and the disposal of the finished product on anything like an economic basis. It was therefore arranged that Charles Warmsley and Co. and sixteen other engineering firms should join hands with the Association in building and operating a model machine, big in itself, for it occupied a space 100ft. long, part of it arranged in two storeys, but small when compared with the gigantic units which produce the immense output required for the world's press. This working exhibit attracted great attention at Wembley, and was especially valuable in drawing visitors through the displays of the finished product, necessarily somewhat static and museum-like. In this connection it is well to emphasise the importance of careful consideration of the relative positions of moving and still exhibits in a section. If the chief moving exhibit is placed at a main entrance, where it must inevitably be seen by all visitors, a good deal of its value is lost. Visitors see it willy-nilly. It should be placed, as at Wembley, 1924, at the back of the section, because it will draw a crowd wherever it is, and all the other exhibits benefit by its presence."

The author goes on to refer to the fact that publishers as a body were not induced to exhibit, and then has the following interesting note with regard to picture post cards in relation to exhibitions, even though, he adds, the association with the display is not intimate. "They (picture post cards) afford to the official publishers of an exhibition great opportunities to secure inexpensive publicity for the exhibition itself, and it was notable that at Munich and Gothenburg full opportunity was not taken of their possibilities. At Munich especially there was not available for purchase by visitors anything like a full range of post cards showing the attractions of the exhibition, a defect the more to be remarked because Germany has always developed this method of greeting. It ought to be possible for anyone to buy at a large number of stalls not only post cards, but stamps, and to have facilities for addressing and posting them forthwith. At the Lion Kiosk in the Palace of Industry at Wembley this was arranged in a prominent fashion. A raised platform round the publications stall itself served as a point of vantage whence a good view could be obtained along the main avenues, and its parapet gave room for people to write their cards immediately after purchase. Exhibitors can also secure valuable publicity for their business and for their presence in the exhibition by giving away or selling (if the terms of the publications concession admit) cards illustrating their stands or exhibits of special interest. Publishers of picture postcards find in exhibitions a good way of popularising their products, and Raphael Tuck had a prominent kiosk within the Palace of Industry at the junction of three gangways. Designed as an octagon by Forsyth and Maule, it was admirably adapted for the display of printed matter of all kinds."

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

NOW THAT the vogue in printing is after the fashion of the antique, it is apt to question whether makers of fine book and antique printings have considered the commercial prospects of machine-made paper with real antique character. Our own experience is that an inquiry round the trade for mediæval charactered printing paper would bring a collection of fluffy antiques, some deckled-edge programme papers and an odd hand made or mould made sample or two with modern texture and finish. Further inquiry would yield something like the real thing of French or Italian origin. There is no insuperable difficulty in re claiming the 16th century paper flavour, and at least one mill in the South is turning its attention successfully to the matter.

AS FAR as Great Britain is concerned, the hopes of a revival in trade during this year have not yet materialised. Foreign competition and uncertainty as to the political situation have put many paper mills on half time. Had the promised revival of general business taken place, an all-round stiffening would certainly have followed, instead of which a distinct weakening has been the case. Hand-made and tub-sized mills generally are finding it hard to keep going, says *British Industry*, the organ of the Federation of British Industries, and owing to the small and irregular demands, are unable to pass on the increased cost of their material. Wood free mills, on the whole, are having a lean time, and in spite of the upward trend in wood pulp, have been obliged to ease prices to induce reluctant orders. Were it not for Australia and New Zealand they would be in a sorry plight. Esparto mills have suffered from the slackening of the Japanese demand, but the improved condition of the yen gives reason for optimism in the near future. Mechanical wood papers and wrappings are still the greatest sufferers from foreign competition, and although the Continental boom in the former has decreased the margin considerably, no amount of price cutting would make them competitive in cases where delivery and regularity are not important factors. News-print mills are still busy, thanks to Colonial preference, and prices are steady. There was very little change in the state of trade among esparto mills during the last month.

IMPORTS of news-print into this country are apparently on the increase, judging by the figures for the first quarter of the last three years. In 1923 the imports were 22,747 tons; in 1924, 29,711 tons and in 1925, 32,031. There has, however, been an interchange of positions among the four leading sources of supply. During the first three months of the year the premier position is occupied by Norway, followed in order of importance by Finland, Sweden and then Newfoundland. During the first quarter last year Finland held the first place, Sweden the second, and then Norway, no consignments being shown to the account of Newfoundland. During the same period of 1923 Finland was the largest supplier, Norway the second, and Sweden third, with a blank against Newfoundland. Regarding the actual figures, Norway's contribution during the first quarter of the present year represented 8,100 tons, against 5,823 tons in the corresponding period last year, and 5,136 tons in the preceding year (three months). The news-print shipments of Finland during January to March (7,927 tons) compared with 11,803 tons in the similar period last year and 9,071 tons in the 1923 quarter. Consignments from Sweden during the first three months of this year reached 7,076 tons, contrasted with 8,266 tons last year and 4,964 tons in the corresponding period of 1923. The balance of the imports come from several other countries, of which the most important are Canada (1,820 tons in the first quarter this year) and the Netherlands (1,772 tons).

Some Simple Paper Tests.

To *Spalding's Quarterly*, the very well produced house organ of Spalding and Hodge, Ltd., Mr. Valentine Spalding contributes a useful article entitled "Rough and Ready Paper Testing." The following extracts will be read with interest:—

Strength.

It is not easy for the most experienced to guess the breaking strain of a paper by tearing it. A better idea can be obtained by holding a sheet in the two hands with the thumbs pressed together on the same side of it and pushing the thumbs through. Repeating several times, this will give a very good idea of the comparative breaking strain of two papers.

Sizing.

Nearly all papers, except blottings and the softest duplicatings, contain some size to give hardness. The process known as tub sizing gives the hardest surface, but the cheaper writings and printings are all engine sized. It is not very easy to distinguish with certainty between the two processes. By pressing the tongue against a sheet far more impression is made upon an engine-sized paper, and a small drop of oil will hardly penetrate a tub sized paper at all, whereas it will go straight through if it is engine-sized. It usually happens that if the paper is hard enough for the purpose required, it matters little by what process it is sized. The best test is to draw several lines with a hard pen crossing one another; if the paper is insufficiently sized there will be signs of running at the points where the lines intersect. Mr. Spalding goes on to suggest a few methods of testing paper for particular uses.

Litho.

Esparto paper is particularly suitable, but not essential, for litho printing. Litho paper must be made the width of the sheet across the machine, so that the stretch in the length is reduced to a minimum; this being taken out by the pull on the paper in winding on to the reel. One can usually tell which way a sheet has been made by looking through it—the small diamond-shaped marks in the paper having their acute angles pointing in the machine direction. It is not always possible to see these, especially in a super-calendered litho. In such a case two equal strips should be cut, one across and one along the sheet. Paper is always stiffer across the machine, and if the two strips are held together in the hand by one end it will readily be seen which droops the more. This strip will have been cut along the way the paper was made on the machine, which should be the length of the sheet if it is to be used for litho printing.

Art Paper.

Art paper is not easy to test without a a practical trial by printing. If the coating lifts easily in pressing the moistened ball of the thumb upon it, it may be liable to pick. This is a question of degree, because the coating can always be removed from art paper in this way, and all art paper will pick if there is enough pull in the ink. An examination of the surface under a magnifying glass is useful, but the budding paper tester must not be unduly excited by what he sees. Through a powerful glass the surface of quite good paper looks like a photograph of the craters of extinct lunar volcanoes. Pinholes, too, will often be seen, but these do not matter if they are very small. Beyond a certain size they are a serious defect.

It is sometimes doubtful if a paper is actually coated or not. A silver coin will usually make a mark the colour of pencil upon a coated paper, and the darkness of the mark will roughly indicate the richness of the coating. As has been said, the coating can be removed by the moistened ball of the thumb. It is, of course, sometimes possible to lift the surface of an uncoated paper in this way; but if it is an art paper, a fine powder adheres to the thumb, otherwise it is a few fibres. If a fair-sized piece of art paper is crumpled in the hands for a few moments, the coating will be broken up and the powder is very clearly seen.

Hand-made and Mould-made.

It is fairly easy to distinguish a hand-made or a mould made paper from a machine-made. First there will be a real deckle edge all round, and there will be no difference in the strength of the paper when torn along or across the sheet. In a machine-made paper the fibres show a better resistance to tearing in one direction. Hand-made paper is not necessarily stronger than machine-made; in fact, the very strongest ledger papers have been machine-made. Azure and blue hand-mades and mould-mades are darker on the right side of the sheet, *i.e.*, the side from which the watermark is read, whereas machine-made papers are as a rule darker on the wrong side. It is almost impossible to distinguish between a hand-made and a good mould-made paper.

There is a type of paper known as mould-made, which is really not rightly so named. It is, in fact, made on a machine, and the only point it has in common with hand-made is the deckle edge on all four edges. This deckle is obtained by means of a cylinder, which is really only a method of cutting the web of paper into sheets. The sheets are not quite separated on the machine, and are afterwards torn apart. The deckle thus obtained is not so feathery as a natural deckle, and can usually be distinguished from it without difficulty.

THE BRITISH & COLONIAL PRINTER
FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 96. NUMBER 21. [REGISTERED AS A NEWSPAPER.] LONDON: MAY 21, 1925. EVERY THURSDAY. PRICE TWOPENCE.

Organisation as a Means of Cost Reduction.

By GEORGE EATON HART.

Organisation is only another word for tidiness and orderliness. To do things "decently and in order" is, I believe, Scriptural, and Scripture is not only a great history, but it is a catalogue of human nature's ideals. The first law of nature is order. Nature sets an example of tremendous patience—no hurry, no agitation, but silently and quietly, with method and wonderful accuracy and perfection, it works out its problems to a definite and full fruition.

There is certainly no industry under the sun where orderliness, method and system are so imperatively demanded as printing, nor any where efficiency and economic productions are more needed.

In the realms of the modern factory, and in view of the present attitude of labour, there is more than a danger of the works getting out of touch with the management, with not only a loss of control but a rapid descent to chaos. To my mind there is in America an altogether closer oversight and superintendence than in English printing offices. There is a co-ordination and cohesion between the various departments of the works that is lacking here. Planning of the work to be done is more general, while research and experimental enterprise is much more general. Consequently America takes a fuller advantage of the teaching of scientific management and more readily adopts new and modern methods of production. But, whilst it is irritating to know that we cannot spend thousands of pounds and copy their example, the fact of their vision and enterprise ought to have the effect of urging us to take stock of our own position, with the hope, as well as the determination, of improving it.

But I am uttering your thoughts when I at once confess how impossible it is for the head of a business to do much else than obtain orders, satisfy his customers, and make sure of getting his money. If he is a practical man, he is painfully aware all the time of a thousand things he ought to investigate throughout the works, but the days come and go, and they are left forgotten.

Cost Reduction and Costing.

I have no formula like a pill or draught by which you can achieve the desideratum of Cost Reduction. It is not done by sacking your best and most expensive workmen, or by trying to reduce wages; but it is better always to face the music than bury one's head in the sand; and so the first step should be critically to examine the work of each department, and ascertain if the best working conditions are observed, whether the output from the plant is satisfactory, and to discover some means, within a reasonable time, to know whether the business is being run satisfactorily. If we know what we want to do, we are well on the way to accomplishing it.

I repeat that the average printer has little time, or perhaps ability, to undertake this work; but ready at hand, at a small expense, a certain remedy presents itself, in the Federation Costing System, which has stood the test of years, as being the most practical, scientific and reliable means of supplying every detail necessary for the carrying on of the largest as well as the smallest business.

We are careful—or should be—of the value of material used; how much more important is it to know the cost of the illusive productive hour!

The System will give you an analysis of profit and loss for each of the various sections of your business, with the balance on each job, and a special reference to jobs showing losses, giving an absolutely complete history of a job from start to finish. It will give the surplus or deficit on all your departments, as well as the total output. The Production Sheet will show the percentage of chargeable and non-chargeable time in each department, and in a few days denote the departments not covering their expense, and by reference to details enable you to rectify the loss before it is too late. You will be provided with the hours machines are employed, and output; the number of employees, with increases and decreases in each department—with overtime; the spoilage and the cause—the allowances made to customers; the comparison of estimate with actual cost; reports of work in progress, and reports and cost of engineers' and works' department. From these particulars graphs or charts can readily be kept, which are so useful for quickly examining the departmental progress, and—most important—the Costing System will provide a weekly balance sheet within ten days of pay-day of the actual trading of the business. Of course, some of the details mentioned may be omitted, but the System is elastic enough to cater for the largest or smallest business.

The adoption of this System with its facilities for checking every penny spent, either in productive or non-productive work, giving the basis of cost at which remunerative work may at any time be safely undertaken, is to my mind a fundamental factor in business management, and in business success, and the first essential of securing cost reduction. The proprietor, or manager, has facts and figures placed before him which enable him with very little effort to investigate any matter needing his attention, and to check the expenditure of every penny of his cost.

Dealing with Orders.

The method of dealing with orders is bound up with the Costing System—these are made up in numbered pads as described later. The order forms contain instructions to all departments, and are repeatedly referred to during the time a job is in the house. Orders should be divided up in sections according to the classes of business done. There would be: Ordinary jobbing work; work executed outside; newspapers, periodicals and bookwork; stationery, etc., etc. A different set of orders are used for each class of work. The order form consists of several duplicates of each, typed and carbonised at one operation, including, for instance, first, for a loose-leaf order book of single orders, the main cost sheet, composition, machines, warehouse and material, also one for an alphabetical binder, for ready reference should customer ring up. Every order is also sent to the costing department where it remains till charged up, which prevents jobs becoming stale and lost sight of. In addition to these order forms an official loose-leaf order is kept, in charge of the secretary.

If a proof only is wanted and a series of corrections is likely to follow, the job is either charged up on proof, or, as more frequently happens, a blank set of tickets is entered bearing the original number, to which are added the letters A, B, C, etc., according to the number of series of proofs corrected, each being filed with a very rough proof showing the actual corrections made. When each job is charged up and invoiced, the girl in charge of the filing department marks off the official order book and adds the invoice number at the side. This suggested system is applicable to a large general business, but with modification would be helpful in any business.

All estimates should be worked out on numbered estimate forms, in duplicate, the quotation bearing the estimate number. The duplicate should be placed in the envelope bearing the estimate number and filed pending the receipt of order. Notification is

Organisation as a Means of Cost Reduction.

By GEORGE EATON HART.

Organisation is only another word for tidiness and orderliness. To do things "decently and in order" is, I believe, Scriptural, and Scripture is not only a great history, but it is a catalogue of human nature's ideals. The first law of nature is order. Nature sets an example of tremendous patience—no hurry, no agitation, but silently and quietly, with method and wonderful accuracy and perfection, it works out its problems to a definite and full fruition.

There is certainly no industry under the sun where orderliness, method and system are so imperatively demanded as printing, nor any where efficiency and economic productions are more needed.

In the realms of the modern factory, and in view of the present attitude of labour, there is more than a danger of the works getting out of touch with the management, with not only a loss of control but a rapid descent to chaos. To my mind there is in America an altogether closer oversight and superintendence than in English printing offices. There is a co-ordination and cohesion between the various departments of the works that is lacking here. Planning of the work to be done is more general, while research and experimental enterprise is much more general. Consequently America takes a fuller advantage of the teaching of scientific management and more readily adopts new and modern methods of production. But, whilst it is irritating to know that we cannot spend thousands of pounds and copy their example, the fact of their vision and enterprise ought to have the effect of urging us to take stock of our own position, with the hope, as well as the determination, of improving it.

But I am uttering your thoughts when I at once confess how impossible it is for the head of a business to do much else than obtain orders, satisfy his customers, and make sure of getting his money. If he is a practical man, he is painfully aware all the time of a thousand things he ought to investigate throughout the works, but the days come and go, and they are left forgotten.

Cost Reduction and Costing.

I have no formula like a pill or draught by which you can achieve the desideratum of Cost Reduction. It is not done by sacking your best and most expensive workmen, or by trying to reduce wages; but it is better always to face the music than bury one's head in the sand; and so the first step should be critically to examine the work of each department, and ascertain if the best working conditions are observed, whether the output from the plant is satisfactory, and to discover some means, within a reasonable time, to know whether the business is being run satisfactorily. If we know what we want to do, we are well on the way to accomplishing it.

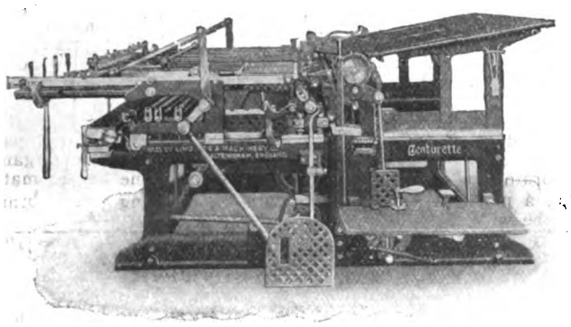
I repeat that the average printer has little time, or perhaps ability, to undertake this work; but ready at hand, at a small expense, a certain remedy presents itself, in the Federation Costing System, which has stood the test of years, as being the most practical, scientific and reliable means of supplying every detail necessary for the carrying on of the largest as well as the smallest business.

We are careful—or should be—of the value of material used; how much more important is it to know the cost of the illusive productive hour!

The System will give you an analysis of profit and loss for each of the various sections of your business, with the balance on each job, and a special reference to jobs showing losses, giving an absolutely complete history of a job from start to finish. It will give the surplus or deficit on all your departments, as well as the total output. The Production Sheet will show the percentage of chargeable and non-chargeable time in each department, and in a few days denote the departments not covering their expense, and by reference to details enable you to rectify the loss before it is too late. You will be provided with the hours machines are employed, and output; the number of employees, with increases and decreases in each department—with overtime; the spoilage and the cause—the allowances made to customers; the comparison of estimate with actual cost; reports of work in progress, and reports and cost of engineers' and works' department. From these particulars graphs or charts can readily be kept, which are so useful for quickly examining the departmental progress, and—most important—the Costing System will provide a weekly balance sheet within ten days of pay-day of the actual trading of the business. Of course, some of the details mentioned may be omitted, but the System is elastic enough to cater for the largest or smallest business.

The adoption of this System with its facilities for checking every penny spent, either in productive or non-productive work, giving the basis of cost at which remunerative work may at any time be safely undertaken, is to my mind a fundamental factor in business management, and in business success, and the first essential of securing cost reduction. The proprietor, or manager, has facts and figures placed before him which enable him with very little effort to investigate any matter needing his attention, and to check the expenditure of every penny of his cost.

Dealing with Orders.



The method of dealing with orders is bound up with the Costing System—these are made up in numbered pads as described later. The order forms contain instructions to all departments, and are repeatedly referred to during the time a job is in the house. Orders should be divided up in sections according to the classes of business done. There would be: Ordinary jobbing work; work executed outside; newspapers, periodicals and bookwork; stationery, etc., etc. A different set of orders are used for each class of work. The order form consists of several duplicates of each, typed and carbonised at one operation, including, for instance, first, for a loose-leaf order book of single orders, the main cost sheet, composition, machines, warehouse and material, also one for an alphabetical binder, for ready reference should customer ring up. Every order is also sent to the costing department where it remains till charged up, which prevents jobs becoming stale and lost sight of. In addition to these order forms an official loose-leaf order is kept, in charge of the secretary.

If a proof only is wanted and a series of corrections is likely to follow, the job is either charged up on proof, or, as more frequently happens, a blank set of tickets is entered bearing the original number, to which are added the letters A, B, C, etc., according to the number of series of proofs corrected, each being filed with a very rough proof showing the actual corrections made. When each job is charged up and invoiced, the girl in charge of the filing department marks off the official order book and adds the invoice number at the side. This suggested system is applicable to a large general business, but with modification would be helpful in any business.

All estimates should be worked out on numbered estimate forms, in duplicate, the quotation bearing the estimate number. The duplicate should be placed in the envelope bearing the estimate number and filed pending the receipt of order. Notification is

The Centurette, made by Linotype and Machinery Limited at Altrincham, Cheshire, is size for size the fastest Two-Revolution machine on the market.

It prints Double Demy at 3,000 per hour, and the quality of the work is above that usually obtained from a two-roller machine.

This result is obtained by the excellence of the engineering work put into this press.

Many Centurettes are in use for colour work.

It is made in two styles—(1) with printed-side-up delivery as illustrated above, or (2) with fly delivery.

Fuller details will be forwarded on application to

LINOTYPE & MACHINERY LTD.
9 KINGSWAY, LONDON

also given to the sales department for following up.

Paper and Ink, Stock-keeping and Records.

This is also a very important part of organisation, and vitally affects cost reduction, and is perhaps one of the most neglected departments.

In regard to ink, a debit and credit account should be kept on the card system, with amounts purchased on one side and the amount collated from the work ticket by the costing clerk on the other, which would give a close check on the ink bought and used.

The buying department does not require emphasis. A conscientious buyer for the business is much more likely to know the markets than any promiscuous buyer.

Charging-up Work.

Time will not permit to deal with this complex matter, one point only I will emphasise and that is—keep a clear and concise *charges book* giving full particulars of contract prices and charges, for repeated work, such as magazines which are estimated for in all sorts of ways. No alteration to this book should be allowed without the manager's initials.

The works should be organised as a watch is organised—each piece in its place and doing its work for the whole, with no unnecessary parts. In the complex and multitudinous units of a composing room there is an opportunity to create an ideal of scientific management.

When I was asked to give this address I thought how easy it would be, like the preacher, to turn up one of my old lectures and fire away. I did so, but imagine my mortification when I realised that ten or more years had sped, and that during that time immense changes and advances had been made, and that although Monotype, Linotype and Intertype were then in full use there has been such an advance in mechanical composition as entirely to revolutionise the conditions of the compositor's art.

The Composing Room.

But, taking the ordinary composing room at the moment, largely using movable type, there has been a marked improvement in the fittings and furnishings, each alley, or section at any rate, being thoughtfully planned for specific work, and to carry a large portion of the type in common use, as well as material required by the compositor for making-up, which obviously materially minimises the footsteps of the worker. Typefounders and furnishers are vying with each other in offering very clever equipments suitable to a firm's specialised work. Besides this, these firms offer their services as "architects" of the composing department, a necessity which has long been needed, provided always that the management really knows what sort of equipment is required. Each printing office, large or small, has its own needs for the class of work it does, and the particular building in which it is located. This introduction is a marked feature of progress, in a department which for generations has been sorely neglected. There is only one precaution which the proprietor, who very wisely invests his capital in this direction, should observe, and that is that he should not only understand the system of working

and equipment in use, but see to it that, having a finely organised department, he is sure that its efficiency is maintained, because it is scarcely necessary to refer to the heavy outlay of the composing room, the wastage, and the difficulty of checking the output.

To a very large extent, however, hand composition is disappearing, whilst the Monotype to a limited degree, and the slug machines (with the Ludlow and Elrod) to a much larger extent—certainly in properly organised plants to 95 per cent.—are gradually eliminating the use of movable types. In my opinion, when the makers of the slug machines are alive to the importance of new and popular faces, and are able quickly to increase these matrices, the use of movable type will be to a much larger degree diminished.

Lay-out Development.

The composing room is more and more being used as a lay-out department and assembly, for the make-up of mechanically set matter; and specially designed and constructed frames, or make-up alleys, are now used, with flat or tilted surfaces to accommodate the galleys containing the matter, with lead and other racks fitted to each random for supplying all materials in general use for display and other make-up, and ample galley racks under for storing the completed matter. The matter is brought to the make-up in the rough, as accumulated from the machine, with the copy marked up, and where necessary the lay-out.

The new and important feature of the "practical lay-out" requires special emphasis. Printers are only just beginning to understand the importance of this new department. A really clever compositor is obviously necessary, with trained artistic perception and practical judgment, who can very rapidly conceive, sketch out and prepare the printer's lay-out. This feature is quite new to printers generally, and needs developing. The technical schools are teaching this, but in my opinion—preparatory training should be given to boys of 14 together with a secondary education, which for several years has been given at the School of Arts & Crafts, London, and at Wild Street Secondary School for Printers.

The saving to be effected by the slug method is obvious. Display founts up to 60-pt. are set from the keyboard or from Ludlow matrices. There is no limit to the supply of type and sorts. Distribution is entirely eliminated, whilst the cost of matrices and their length of life are very economical compared with the cost of type, with the necessary distribution into cases, and it is worth repeating there is no shortage of sorts, nor the awful bugbear of low letters—a most important factor.

To-day, too, there is a most serious wastage of type—caused, to some extent, by frequent long runs at machine, like adverts, in periodicals and magazines, but much more by the continual heating and pressure of modern stereotyping processes. This is specially marked in the growing practice of advertisement setting and stereos for advertising agents, or in the case of daily and weekly papers where the formes are moulded so many times whilst still hot. A careless stereotyper may quite easily ruin a whole fount of expensive type at a single moulding. The only real remedy is cold moulding—which is already extensively practised—or, the adoption of the offset process!

There are several departments of a composing room which need careful and expert handling. The store is perhaps most important, for a well-ordered store is to the composing room what a commissariat is to an army. Method, orderliness and system should be strictly observed. It requires a genius, with extraordinary patience and good temper, to run a printer's store. The card system should be widely used—for all standing matter, for formes, chases, for superfluous type, for furniture and for other material. The store would generally deal with blocks, which require systematic care from start to finish. A good plan is to number every block, either with punches on wood or indelible pencil on metal, pull a proof and enter very briefly in a book, with number, filing the proof in loose-leaf boxes, while in printer's possession, and when returned, transferring to another similar file, with receipt attached. Then, too, in order to save time at machine, blocks should be treated either by the Hacker Plate Gauge, or at least by the Moule Process, by which a block is very quickly made type-high.

Value of Pneumatic Tubes.

In a factory, and especially one of several floors, it is most essential to instal pneumatic tubes, connecting the counting house and all departments with each other, enabling an interchange of letters and documents besides, where necessary, small lifts in addition to the ordinary passenger and goods lifts. Ample telephone service should be provided.

By the aid of pneumatic tubes the reading department may conveniently be placed on the second floor. This department is often very badly arranged, but a little thought can make it very practical and comfortable for the important work done.

My time is well-nigh gone and I have dealt with only one department, although it is certainly the most important and most intricate department in a printing office. I have, however, explained the system of orders, and of collating and transferring of time, and I have here amongst various other forms and documents a Costing System Weekly Return Sheet of machine runs showing highest and lowest, the averages for a period, and the current week.

All checking of production, comparison figures, facts, graphs, and even Costing Systems, however, are obviously useless if they are not understood in detail and acted upon. An employer or a manager must practise what he preaches, and to enable him to do so a weekly meeting with his departmental managers should religiously be held—agenda prepared, minutes taken and read, when a surprising insight into many of the dark places of a factory, and its organisation, including the order, costing and accountancy departments will be revealed. It will not need an expert, but only a modicum of common sense to find remedies for defects which most assuredly will always be discovered.

The factory that makes good is the one with the most up-to-date methods in the machine-room. Money is not made so much by hand labour. Hand labour is the brains, the studio—machine labour, the works. Therefore take advantage of the latest inventions, although I am painfully aware that it requires pluck. Organise your work so that it is done as automatically as your walking, leaving the brain clear for thinking.

Costing is the handmaid to organisation, and without it a printer is not in the position to meet competition intelligently or effectively.

As I said at the start, I have no prescription for cost reduction. Cost reduction requires minute attention to detail—intelligent observation, with technical experience—enterprise in new methods and machinery—with the Federation Costing System as a sheet anchor. It is only by this means that cost reduction can be secured and a business carried on efficiently and successfully. And—a last word—the man at the top is to blame always, as blame is where authority is!

Printing and Supplies at Islington.

Prince Henry Inaugurates a Great Exhibition of Machinery in Operation.

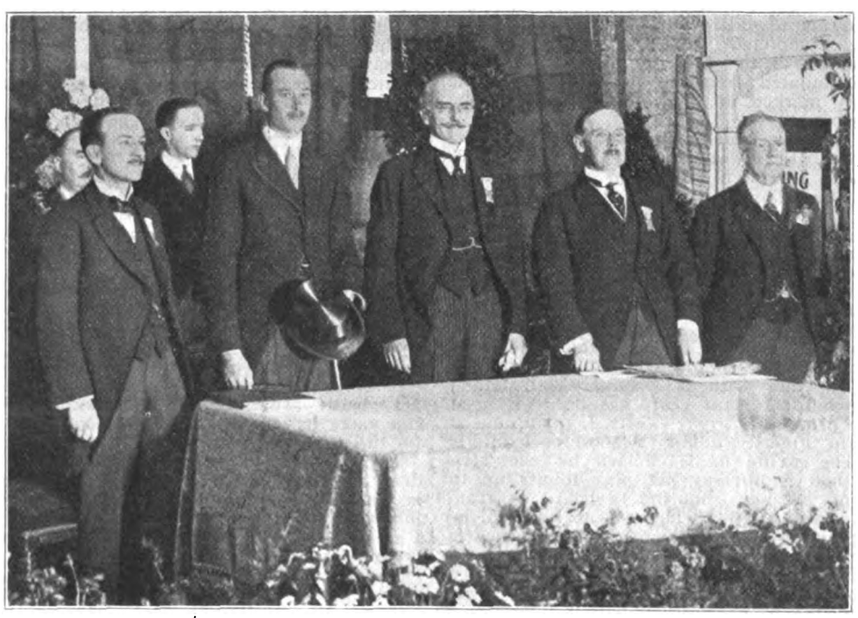
Prince Henry opened on Saturday at the Royal Agricultural Hall, Islington, the Seventh International Exhibition of Printing, Stationery and the Allied Trades. International it was, in fact, as there were present on the first day representatives of the printing trade from all over the world—from Australia and America, from the Continent of Europe and South Africa and also from India, China and Japan. Foreign legations were also much in evidence.

Reception and Tour of Inspection.

It was in every way an auspicious inauguration of a record exhibition, which in size and character far excelled previous displays of the kind. His Royal Highness was met at the entrance to the Hall by the Reception Committee, headed by the president of the Exhibition (Mr. W. Howard Hazell, J.P., president of the Federation of Master Printers), Mr. W. H. Lock (chairman of the Council), Mr. W. I. Burch (vice-chairman of the Council), and Mr. F. W. Bridges (organiser), the members of the Council being formally presented.

Immediately following his arrival Prince Henry began a tour of the stands, passing through each section and evincing a keen interest in all the phases of the printing industry which are revealed in such completeness. He saw the great presses running, looked at the beautiful exhibits of printing, stopped at many of the stalls, and heard the processes of colour printing and photo lithography explained.

Having made a complete circuit of the Exhibition, covering the Main Hall, the Gilbey Hall and the Gallery, the Royal visitor and the members of the Reception Committee assembled on a specially erected platform for the opening ceremony. Mr. Howard Hazell, as chairman, explained that Prince Henry had honoured the Exhibition by coming there to inaugurate it. He had made no perfunctory visit, because he had seen practically every exhibit. His presence was only another proof of the deep interest that all the members of the Royal Family took in the prosperity and success of the great industries of the country. (Cheers).



A Royal Tribute.

Prince Henry, in declaring the Exhibition open, said: "It is a great pleasure to take part in an exhibition connected with such an important industry and historic craft as printing. I understand there are a quarter of a million people engaged in the printing business alone in this country, that its wages bill is over £50,000,000 per annum, and that it ranks in importance as the sixth industry of the country. In one respect it ranks as the first industry, because the wages paid are on an average the highest of any trade in the country. When the great engineering trade which makes the wonderful machinery which I have just seen is added, together with the allied trades also represented, this is indeed an exhibition of great importance. My brief inspection of the machinery, of which, I am glad to know, 80 per cent. is of British manufacture, fills me with admiration, and has deepened in me a wonder at the inventive genius, constructive skill and remarkable precision which go to the making of the printed page and picture. The educational value of this wonderful exhibition is very great even to the layman; it must be of intense interest and worth to those actually engaged in the printing craft.

"It is good to know that not only are visitors present from India, China, Japan, Australia, New Zealand, the United States and Canada, but that many thousands of workers vie with their employers in examining with care the latest products which are destined to contribute to the trade of which they are so proud. I am reminded in this connection that your Joint Industrial Council is an outstanding example to the whole industrial world of what can be done by mutual conference between all sections of a trade not only in the settlement of disputes which must arise from time to time, but for the improvement in health, conditions of labour, hours of working and holidays.

"I hope this exhibition will not only stimulate craft pride, but will also be the means of increasing our export trade and carrying the splendid results of British genius and skill to all the ends of the earth. In declaring this exhibition open and wishing for it every success, I am by so doing wishing increased prosperity to the trade of our country and Empire." (Cheers.)

Mr. W. H. Lock proposed a vote of thanks to Prince Henry for coming to perform the opening ceremony, in doing which, he said, His Royal Highness had given an impetus to the printing industry which would not be exhausted when the Exhibition closed. By his presence that day, the Prince had added further to the debt which the business men of the Empire owed to the Royal Family for encouragement and assistance so readily and ungrudgingly given. (Cheers).

Prince Henry Declares the Exhibition Open.

Presentation of Commemoration Medal.

Mr. Lock then, on behalf of the organisers, asked His Royal Highness to accept a gold medal specially struck in commemoration of the Exhibition.

Mr. Burch, in seconding the resolution of thanks, mentioned that the Exhibition comprised the most efficient and most up-to-date machinery that could be found throughout the whole world.

Prince Henry, in reply, said no thanks were due to him. Rather he owed a debt of gratitude for the opportunity afforded him of inspecting the most wonderful machinery and the fine examples of printing and stationery.

The Luncheon.

There was a very large gathering of gentlemen eminent in the printing industry at the inaugural luncheon which followed the opening ceremony, Mr. Howard Hazell being again in the chair.

To Col. Sir Arthur R. Holbrook, K.B.E., M.P., fell the honour of proposing "Success to the Exhibition." He recalled the marvellous progress which had been made in the printing trade since the days of Caxton, not only in regard to typesetting, but to printing generally by machinery. After observing that a large amount of intelligence was required in printing, Sir Arthur said he was sure that Exhibition would do a great amount of good and would encourage all who were engaged in the industry. The speaker went on to refer to competition, particularly from His Majesty's Government, and proceeded to express his strong conviction in favour of maintaining private enterprise in every industry.

Mr. W. H. Lock, replying to the toast, said he had been assured by visitors from the United States that while they had in America machines more wonderful, and while their printers possibly were more enterprising, they had not succeeded to the same extent as British printers' engineers, nor had they been able to get together such a display as had been opened that day. He thought that was a matter for congratulation to the printers' engineers, the printers' suppliers and the manufacturers of the various machines in this country. Mr. Lock went on to refer to the work of the Joint Industrial Council and the promotion of health conditions in the printing industry. In conclusion, he thought the promoters of the Exhibition deserved some congratulation on proceeding with their enterprise in spite of the economic depression which prevailed.

Mr. Kenneth W. Bridges proposed the toast of "The Visitors," mentioning the names of delegates from various parts of the world and the representatives of foreign governments.

Mr. C. W. Bowerman, M.P., in responding, mentioned a number of interesting items in the Exhibition. In the gallery, for instance, he had seen the first number of the *Family Herald* (dated about 1847) which was published by machinery, and also referred to some beautiful specimens of printing which had been done when the craft was a craft, and when there was an atmosphere of love about the work. He was referring to the collection loaned by Mr. G. W. Jones. Mr. Bowerman went on to speak of the wonderful developments which had taken place in printing and to the work of the Joint Industrial Council.

Mr. Van der Bom, representing the master bookbinders of Holland, also replied.

Lord Riddell proposed the health of "The Organiser of the Exhibition, Mr. F. W. Bridges," and paid a very high tribute to his enterprise. That was really a great exhibition, he said. Two factors which had greatly influenced the newspaper press were the rotary printing machines and cheap paper. These had revolutionised not only the newspaper world but all worlds. His Lordship went on to refer to the new home at Filey of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, and mentioned that the members of that Union were taking £15,000,000 a year in wages. That fact, he thought, pointed to

the stability of this country and he personally had no objection to high wages if he got good work in return. Lord Riddell suggested that employers of labour connected with the printing trade should take their workpeople to the Exhibition, so that they might see the developments which were going forward.

Mr. Bridges, who for the past twenty-five years has been associated with the printing trade, suitably acknowledged the toast.

Sir George W. Truscott, in proposing the health of "The Chairman," referred to Mr. Howard Hazell's important work on behalf of the costing movement and to the labours of his father, Mr. Walter Hazell, both on behalf of the printing industry and of philanthropy.

Mr. Howard Hazell, who was cordially received, indicated the importance of the printing industry by envisaging a world in which printing had suddenly ceased to exist. It was essential, he thought, that they should have a big exhibition in order that they might see the progress which was being made. The next sixty years, he was sure, would show astounding developments, but success could only be obtained by a ceaseless vigilance and a willingness to learn. Let them aim at better methods and discard the old and the obsolete. If they advanced civilisation in that way, they would obtain a fitting reward for their energy, efficiency and progress. (Applause.)

A GLANCE AT THE EXHIBITS.

Enough has been said above to indicate that the Exhibition provides a unique and very impressive demonstration of the capabilities of the printing and allied trades. Considerations of space forbid our giving here a complete list of stands and exhibits, but it may be of interest to jot down a few impressions gained in an early tour of the Exhibition.

Entrance Hall.

As one enters the Exhibition, the first exhibit that catches the eye—Nos. 1 and 2 in the Entrance Hall—is a very striking one. It is that of Messrs. Francis J. Connolly, Ltd. (sole agents for Marinoni-Voirin, Paris), an exhibit that has the distinction of covering the greatest amount of floor space. Besides the standard apparatus made by Marinoni-Voirin, there are to be seen notable new machines—such as the two-colour superimposed single blanket machine—and the big array of machinery at work attracts continual attention.

Messrs. Johnstone and Cumbers, Ltd., are to be found near by, showing printers' inks, the materials for their manufacture, and examples of their use.

Visitors interested in imitation leathers should not overlook the examples shown by New Pegamoid, Ltd., and the British Pluviusin Co., Ltd., in this section.

One of the most novel and pleasing stands in the Exhibition is that of Messrs. B. Winstone and Sons, Ltd., whose charming representation of a country cottage contrives to introduce a rural air in the midst of far from-rural surroundings. All interested in printing inks and printers' sundries such as rollers, blankets, felts, furniture, brass rule, etc., will find the Winstone cottage a useful house of call.

Printers' metals are, of course, the subject of the fine exhibit by Messrs. Capper Pass and Son, Ltd., of Bristol Metals for all the printer's purposes and in great variety of form will be found here strikingly displayed, together with examples of their practical use.

In furtherance of his service to printers in respect of such matters as valuation and insurance, Mr. Edwin W. Evans has a stand here on the threshold of the Exhibition, and his representatives are available to advise inquirers.

Lithographic plates are the feature of the stand of Algraphy, Ltd., who provide an impressive exhibit of rolled and selected sheets of aluminium and zinc for offset and all litho processes. Many interesting sundries related to the lithographic trade are also shown.

The great variety of colours shown draws attention to the exhibit of the Albion Sewing Cotton Co., Ltd., whose "Silky Cords" for use in calendars, carrier bags, boxes, etc., are produced in over 100 colours.

Main Hall.

The Main Hall is crowded with imposing exhibits of every class, a striking feature being the large amount of machinery in motion.

One of the first encountered is the exhibit of Messrs. Harrild & Sons, Ltd., who have a very fine and extensive show of British-made machinery in great variety.

The working of the H.T.B. full automatic pile feeder, which is shown near by attached to an L. and M. quad demy single-colour rotary offset press, is drawing a crowd of interested observers.

One of the outstanding novelties of the Exhibition is the exhibit of the Typary and Typon Co., Ltd., who are showing two examples of the remarkable Typary machine recently described in our pages. This machine is shown in actual use producing printed copy for the reproduction of text matter by offset or gravure methods. The printed slips of paper taken from the Typary text typing machine are taken into a dark room close by, where, by the use of the novel "Typon" paper reproduction process, paper negatives of the text matter are produced with remarkable speed and facility. This exhibit is a unique attraction, and all who are interested in lithographic and allied methods of reproduction will doubtless make a point of acquainting themselves with this promising development.

Papers for the printer are shown in attractive forms at the stand of Messrs. Frederick Johnson and Co., Ltd., whose stand makes a speciality of Hammermill Bond paper, which is already a very popular one with printers. A fine range of letter headings printed on this paper can be inspected, and a variety of printed subjects, very attractively produced by the aid of the Johnson papers, make an interesting and instructive show.

Messrs. Waite and Saville, Ltd., of Otley are here, and the large show of machinery which they present is, of course, an impressive one.

All interested in envelopes will be visiting the stand of Messrs. David Carlaw and Son, Ltd., of Glasgow, who are drawing special attention to a new high-speed envelope folding and gumming machine, which is being shown running.

A handsome collection of printed specimens is the main point about the stand of Messrs. John Kidd and Co., Ltd., who thus show the wide capabilities of their inks in respect of a big variety of printed work, not omitting offset and photogravure.

Working machinery is drawing much attention to the stands of Messrs. Connoll and Coles, Ltd., who put in the forefront of their products the "Vercyl" vertical cylinder high speed job printing press, a recently improved type of machine which is demonstrating a number of advantageous features.

An imposing showing of printers' metals is to be found at the stand of Messrs. T. G. and J. Jubb, the well known Leeds firm. An attractive feature is provided by a large display of rotary plates cast by the Junior Autoplate machine and by the Winkler Patent Automatic Casting machine. Many well-known newspapers have provided such plates, which supply an interesting practical demonstration of the utility of the Jubb metals. The firms represented include such concerns as George Outram and Co., Ltd., Associated Newspapers, Ltd., *Yorkshire Post*, Spottiswoode, Ballantyne and Co., Ltd., Associated Scottish Newspapers, Ltd., United Newspapers (1918), Ltd., and so on, making a very impressive list of important printers who find it to their advantage to utilise the products of Messrs. Jubbs' foundry. Visitors at the stall are being given copies of the *Daily Mail (Atlantic Edition)*, printed on the "Mauretania"—another newspaper using the Jubb metals. Examples on the stand show the use of Jubb metals for the production of all varieties of type, plates, borders, formes, etc., used in the printing office. There are also to be seen, of course, a variety of leads, clumps, furniture and quotations, as well as Jubbs' lino cleansing tablets. Very handsome book printing shown on the stand illustrates the fact that monotype printing with the use of Jubbs' metals can be of so high a character as to be indistinguishable from the best hand-set work.

On the stand of Messrs. Frank Horsell and Co., Ltd, of Leeds, are to be found many supplies of interest to lithographers and others, including inks, and the well known Parker printing plates.

A large silvered dome, supported on pillars, gives a distinct and striking appearance to the stand of Messrs. Fry's Metal Foundry, where all users of printers' metals will find much of interest. Particularly striking are the exhibits which indicate the application of highly scientific methods to printing trade metallurgy, and much interest is being taken in the specimens and photomicrographs which give the visitor an insight into some of the mysteries of this highly complex subject. At this stand also an opportunity is provided of examining the new dross containers which Fry's Metal Foundry has recently introduced to guard against lead poisoning, a device which has already received widespread recognition. Exhibits and demonstrations are also provided in respect of melting pots, foundry equipment, composing-room supplies and other items of great practical importance to the printer.

The well-known Otley firm of Dawson, Payne and Elliott, Ltd., is, of course well represented, and the fine show of working machinery draws many inquirers.

Linotype and Machinery Limited have at their stands in the centre of the Main Hall a most imposing array of machinery, as befits this very important firm of printers' engineers. Amongst Linotype machines on view are two of the famous Model 4 Linotype, which has been still further improved since it was last exhibited in this Exhibition in 1921. This model, which was originally specially designed to avoid the necessity of removing and replacing magazines, is equipped with three superimposed magazines ready for immediate use. Improvements have been developed and added to this model during the past few years, including the facility with which any one of the three magazines can be removed and replaced by another without disturbing the remainder. The L. & M. Perfector is another new development of the company's works at Altrincham. It is built on the same lines and in the same works as the Miehle, with a bed movement identical with that premier single-colour machine. The machine is the No. 0000, which takes a sheet up to 44 in. by 64 in.; other sizes are in course of manufacture. The Pony Autoplate, now publicly exhibited for the first time, is a marked development in machinery specially designed for the casting of curved stereo plates, and is of particular interest to newspaper printers who do not require the full capacity of the Autoplate or the Autoplate Junior. The L. & M. Matrix Mangle, the L. & M. Matrix Dryer and the L. & M. Automatic Metal Furnaces are amongst other exhibits on these attractive stands.

Messrs. A. W. Penrose and Co., Ltd., show many of their specialities in respect of photo-process work. They draw special attention to a number of machines in the class of photo-engravers' finishing machinery, such as routers, bevellers, etchers and so on. Prominent is a new photo litho camera mounted on an all-metal stand and accompanied by arc lamps, for which special advantages are claimed. Lithographers will be interested in variou other apparatus on this stand, such as a large face-up vacuum printing frame and a graining machine, as well as in such other apparatus as the Penrose hand offset proofing press and the Bassett registering device for colour work.

Close by is the stand of Pictorial Machinery, Ltd., a striking feature of which is the immense blue bottle by which it is surmounted—a reproduction of a bottle of "Pictograph Line Collodion." Much attention is being attracted by the working exhibits on this stand, where demonstrations are being given not only of the latest model "Lithotex" Step-and Repeat machine, but also of the "Printex" negative printer. A new camera, with some very attractive features, is amongst other items, and there are smaller machines, such as routers, which are not less interesting in their own class. We were informed of some rather sensational cuts in prices, which should enhance the interest of these exhibits.

At the very fine display of the Lanston Monotype Corporation, Ltd., an outstanding item is the Miller high speed cylinder job press. The working of a large Harris automatic press is also continually drawing a crowd to this spot. It goes without saying that there is an admirable show of Monotype keyboards and casters, where printers have an exceptionally good opportunity of investigating the wide applicability and up to-date character of the work produceable by these machines.

Messrs. R. W. Crabtree and Sons, Ltd., who are, of course, specialists in newspaper printing machinery, are unable to find room for a huge press of this kind, but show many details that are of interest to newspaper printers, whilst a very notable exhibit in the lithographic line is to be found in the offset printing machinery which can be seen running on their stand. The "Ensign" super-offsets have features well worthy of investigation.

Those interested in photo litho and allied processes will also find much to interest them in the exhibit of Messrs. Hunters, Ltd., whose large cameras, printing down frames and other apparatus make an impressive show.

A large variety of machinery in operation can be inspected at the stand of Messrs.

Digitized by Google

Furnival and Co., Ltd., where offset presses are an outstanding line.

Folding machines form the central feature of the exhibit of the Canadian-American Machinery Co., Ltd., who make a convincing demonstration of the wide capabilities of their well-known British-built folding machines, of which the Cleveland Folder, which is continually being improved, is an extremely popular model.

As was, of course, a certainty, a most imposing showing of offset machinery is to be found at the large exhibit of Messrs. George Mann and Co., Ltd. A continual stream of those interested in lithographic printing is passing round the exhibits here, which include a large number of handsome rotary offset machines possessing features of unique character. An out-of-the-ordinary exhibit is a rapid rotary tin printing machine, which is fitted with pile feed and self register attachment.

A fountain with water spray in action gives distinction to the exhibit of Messrs. Shuck, Maclean and Co., Ltd., whose printing inks are, of course, known throughout the trade.

A large and varied selection of beautiful specimens of the printers' work ornaments the stand of Messrs. Lorilleaux and Bolton, Ltd., and gives proof of the capabilities of the wide range of printing inks which this old-established firm is supplying to the trade. A centre of attraction on the stand is the working exhibit of the "Frequentia" colour testing lamp, which is designed to give rapid and reliable indications of the fastness to sunlight possessed by printers' colours.

Large ruling machines shown in action are a striking feature of the exhibit of Messrs. John Shaw and Sons of Honley. Several of their well-known ruling machines are being demonstrated, and there are a number of innovations which will be very interesting to all printers who have to deal with the process of ruling.

A good indication is given of the very wide range of products offered to the trade by Messrs. Usher Walker, Ltd., who, at their stand, are showing not only printing inks, rules and other products in that particular class, but also printing machinery, such as platens and folders, the working of which draws a crowd of interested spectators.

Gilbey Hall.

The prospective buyer of machinery as well as others will find plenty of appliances of an interesting character in the Gilbey Hall. This spacious enclosure is occupied by some forty well-known concerns that represent practically every branch of the printing and allied trades. It is interesting to notice that many of the exhibitors have taken positions in this hall similar to those they occupied in the 1921 Exhibition, although in nearly every case they have either augmented their displays or enlarged their stands.

Considerable amount of interest is being shown at the exhibit of Messrs. Dawson, Payne and Elliott, Ltd., where a "Cossar" patent flat bed newspaper machine is occasionally to be seen working.

Close by this stand is the display of the Victory-Kidder Printing Machine Co., Ltd. Among the principal attractions at this stand are the Kidder self-feed bed and platen printing press and the two-roll product press. Already a goodly number of printers have examined the products of this firm, among the visitors being Mr. J. R. Firth, of P. J. Firth, Ltd., Australia, who paid a visit to the Exhibition on Saturday.

The stand of Messrs. Winkler, Fallert and Co., Ltd. (whose British agent is Mr. W. J. Light) is, as usual, attracting a good deal of attention. The firm is showing many up-to-date stereotyping appliances specially suitable to the needs of the modern newspaper and general printer. Particular interest is being evinced in the Winkler patent automatic stereo plate casting machine, an appliance which casts three or four plates in a minute, the plates being ready to be placed direct on to the rotary without the necessity of any finishing by hand. Among many other attractive appliances shown are the flat plate milling machine, the automatic moulding and drying press, and the automatic rotary matrix drier. Mr. C. Winkler and Mr. C. Eulenberger are at the present time in London, and are ready to offer advice concerning their machinery.

Messrs. Smyth-Horne, Ltd., in addition to their now familiar position at the entrance to the Gilbey Hall, have taken further space in another part of this same building. Many of the firm's well-known labour saving appliances are on view and in full operation. Besides the famous Seybold three-knife trimmer and the new No. 10 book sewer (which is just fresh on to the market), the firm is showing a Smyth space band, a device which is designed for the purpose of cleaning and keeping in perfect condition the space bands of Linotype and Intertype machines. With regard to this last-mentioned apparatus it is stated that there are at the present time only three in existence, and the future of the contrivance is being looked upon with a good deal of interest throughout the printing fraternity.

John Dickinson and Co., Ltd., have a very handsome stand, solid oak being largely used in its construction. The firm is showing a variety of papers, boards, envelopes and stationery, the whole being a good representative display of their various mills.

Oscar Friedheim, Ltd., are again well in evidence, having increased the number of machines they are showing compared with the 1921 Exhibition. The firm is exhibiting amongst others their latest and up-to-date simplified book sewing machine in various sizes, the thread stitching and knotting machine, a looping machine, and an entirely British cloth slitting and cross cutting machine. Their appliances are intended to serve the demands of the small bindery as well as the large one.

The Miehle Printing Press and Manufacturing Co., Ltd., are showing a wide range of machinery, including the vertical job press, a four-roller fully automatic press, and a fully automatic pony press. The vertical job press, which the makers claim to have many points of advantage, is creating a considerable amount of interest.

Intertype, Ltd., have a fine display of four Intertype machines, each of them being in full operation. Of chief interest is the "Mixer," which is being shown in this country for the first time. This machine is capable of setting eight different faces in one line, and its range of size is from five to sixty points.

Messrs. H. W. Caslon and Co., Ltd., occupy the same commanding position as in the 1921 Exhibition at the entrance of the Gilbey Hall. Their specialities cover a full range of appliances including the latest labour-saving designs of composing-room equipment in both wood and steel, composing frames, randoms, type faces, platens, guillotines, proof presses, whilst a new model Virkotype is again causing a great deal of comment.

W. Lunnon and Co., paper merchants and mill agents, are showing samples of their well known makes of typewriting papers, included their "Cobham Cream Laid," which is an esparto paper, stocked in the usual sizes and weights, and many other popular lines.

The Cross Paper Feeder Co., Ltd., the well-known makers of automatic feeders, are attracting many visitors to their exhibit. There are six Cross continuous automatic feeders being used in the Exhibition—three on rotary offsets, two on letterpress work, and one on a folding machine. The firm state that 900 of these cross feeders are at present at work in this country, one firm alone having as many as 131.

Messrs. R. Hoe and Co., Ltd., are showing a four-page-wide newspaper printing unit electrically driven by a Witton-James equipment controlled by push-button stations. Frequent demonstrations of the mechanism are to be given throughout the run of the Exhibition.

Spalding and Hodge, Ltd., are showing a wide range of papers likely to be required by the printer, whether small or large. Amongst the samples of writings there are high-grade tub-sized cream laid and wove papers; bonds include the watermark British Dominion Bond, the United States Bond and the Kingsway Bond.

Wynne and Selby, Ltd., are showing inks for the offset process in great variety, and have available at the stand a wide range of brands ready for use by those who may require them whilst running their machinery at the Exhibition.

The Federation of Master Printers have a display of useful publications relating to the work of this organisation. Costing forms are available at the stand, where non-members as well as members are cordially invited to make inquiries.

The F. W. and C. B. Sheridan Co., Ltd., display a large number of appliances suited to the requirements of the up to date bindery.

The Rembrandt Intaglio Printing Co., Ltd., have a very fine exhibit of photogravures in one and three colours.

The Gallery.

The Gallery also contains many interesting and attractive stands. Process Engravers' Hall is the title given to the North Gallery Annexe. Here the Federation of Master Process Engravers have prepared a comprehensive exhibit. Moreover, the ample space has been specially decorated and furnished, so that a very welcome rest can be obtained.

Individual members display some of their work, and the beautiful effects which can be obtained by modern methods are also shown. Black and white and three and four colour work is demonstrated, together with commercial work of great variety. Photogravure methods are a feature of this exhibit.

Gummed papers are a conspicuous item, the stands of Messrs. Samuel Jones and Co., Ltd., and the Gummed Paper Manufacturing Co. being side by side. Paper in infinite variety is shown by the firm which adopts the "Camberwell Beauty" butterfly as its trade mark. Some wonderful effects in fancy papers are shown, it requiring a special stand to display the stationery products alone. Non-curling gummed papers and tapes, sealing machines and other ingenious devices are included.

The Gummed Paper Manufacturing Co. exhibit their well-known "Tiger-Tiger" brands. There are glued stay papers, sealing paper, linen and cambric tapes and a variety of up-to-date sealing machines. Particular attention is called to their super sealer, which, while retaining the basic principle of their former De-Luxe Sealer, is refined to ensure greater efficiency in operation, ease of refilling, and is certainly more attractive in appearance than the former models for the high class departmental shop or store. The machine itself can be loaded in less than two seconds. One easy stroke of the lever ejects the tape, moistens it, and cuts it off to the desired length, a factor which is of great importance in standardised packing.

Papers of high quality are shown by Portals, Ltd., who have carried on papermaking for over 200 years, having been founded by Henri de Portal in 1719. The firm are distinguished by the fact that they make paper by the three known processes—hand-made, mould-made and Fourdrinier. Examples of the products by these methods, beautifully finished and adapted to various purposes, are displayed, including Portal standard watermarked lines. A feature of the service is the attention given to packing of reams, and those on view demonstrate this to perfection.

A fine assortment of leathers are to be found on the stand of Messrs. Nickerson Bros., whose factory at Bermondsey turns out this prepared material in styles specially suited to the bookbinder. Various kinds of leather are shown in the numerous styles, finishes and shades that have brought leather manufacture to a fine art.

J. Bancroft and Sons Co., of whom Messrs. Nickerson are sole selling agents in Great Britain and Ireland, exhibit various exclusive lines of book cloths, specimens of the famous Legal Buckram being shown.

The Oriental Leather and Leatherette Co. (1908), Ltd., have a large assortment of special papers and leather substitutes which appeal to boxmakers, bookbinders, printers and others.

In the Princes Gallery the London Master Printers' Association have an exhibition of specimens of fine printing submitted by their members in the Inter-District Competition for the Challenge Cup. These cover a wide range of various processes both in colour and in black and white, and should not be missed by any lover of good printing. Covering practically all printing processes, and exemplifying innumerable varieties of craftsmanship, the exhibition is a striking demonstration of the capabilities of London printers.

The Challenge Cup (which we illustrate herewith) has been awarded by the Adjudicating Committee to the West and North West Association, and will, we understand, be presented on the occasion of the official visit of the L.M.P.A. to the Exhibition on Wednesday, May 27th.

There is also a very praiseworthy display by the London School of Printing, a long wall in the gallery being effectively filled by specimens of practical work done by the students. Included are artistically tooled letterpress books, stationery binding and publisher's work, together with colour work, products of the photo-litho offset process, and layouts and designs for advertisements. Prince Henry's attention was called to this section as demonstrating the value of technical education.

Messrs. Stephenson, Blake and Co. make a very effective wall display, showing the character of various types. The arrangement

Digitized by Google

is in excellent taste, simplicity and boldness going hand in hand.

Tastefully and appropriately decorated in light blue and gold, the stand of Messrs. Stonhill and Gillis is furnished with a number of publications valuable to the printer and allied trader. This is in addition to the *British and Colonial Printer and Stationer* (founded in 1878) and the *World's Paper Trade Review* (established in 1879). These weekly journals, which serve the trades mentioned faithfully and well, are to be found on Stands Nos. 51 and 52 in the Gallery, together with books on printing, papermaking, bookbinding, waste paper recovery, not forgetting the useful brochure, "A Dictionary of Paper Terms." A welcome is extended to visitors, and there are opportunities for resting. Much attention is being attracted by

London Inter-District Printing Competition Challenge Cup.

the miniature edition of the *British and Colonial Printer and Stationer*, to which reference is made in another column in this issue.

That Messrs. Langley and Sons, the Euston Press, have made a special study of poster printing is clearly seen in the few but striking examples they have on view. In conception and execution the work is excellent.

Printing benevolence is a conspicuous feature of the Gallery. The Lloyd Memorial Home, the Caxton Convalescent Home, the Printers' Pension Corporation, and the Printers' Medical Aid and Sanitoria Association all demonstrate their valuable activities on behalf of members of the craft whose health and infirmities require attention.

As an aid to modern lithographic and photo-engraving establishments the Ben Day Shading Mediums are important. The mediums represent a wide range of line tints, hand and mechanical stipples, fine half-tone tints, and grains and textures—the latter specially adaptable for fashion illustrations or background effects for bold letter advertisements.

It is interesting to note the presence of the Printing Trades Alliance, the officers of which are anxious to spread the knowledge of their conciliatory principles.

Limitations of space forbid an exhaustive account here of all the stands in the Gallery, but the complete modern bag manufactory in operation, set up by Hartmann Bros., should not be overlooked.

Mr. J. L. WILSON GOODE, H.M. Trade Commissioner, in a report on the British West Indies and Central America, states that both in paper and stationery the question of price is of paramount importance, and there is practically no demand for high-class productions. America has most of the trade in typewriting materials and pencils, and Holland in strawboards, but in other lines cheap British goods are in fair demand, though many of them have to compete with job lines from other countries.

Worshipful Company of Stationers.

Visit to the Printing Exhibition.

The Worshipful Company of Stationers paid an official visit to the Printing Exhibition on Monday afternoon. Needless to say the members, interested in all processes that are brought into requisition to produce the printed book or publication, keenly studied the exhibits and were greatly impressed with their representative character, excellence of design and the great progress made since the last exhibition.

The party, on the invitation of Mr. F. W. Bridges, assembled for tea at 4 o'clock, when Mr. Bridges extended to them a cordial welcome. He was sure the Exhibition would provide a great deal that was interesting, and he remarked that the Stationers' Company was one of the oldest institutions identified with the printing and allied trades. The Company stood out prominently as exercising a great influence in connection with the industry, and they would be glad to know that the present Exhibition was one of the finest held in any part of the world. Their colonies looked to the old country to take a lead, and the improved machinery and appliances on view would, no doubt, be keenly studied by visitors from abroad.

Mr. Richard Bentley, the Master of the Stationers' Company, expressed to Mr. Bridges their appreciation of his hopitality, and also congratulated him on the arrangement of such an excellent exhibition. It was most fitting that it should be held in London. The printing industry was one of great importance, and the value of the Exhibition could not be overestimated. It brought visitors from the provinces and also from overseas, and created a favourable impression of the great advance made by British manufacturers in supplying mechanical and other devices which, from the point of view of simplicity and economy, augured well for the future of the great printing and allied industries of this country.

The party included the following:—Messrs. R. A. Austen-Leigh, R. H. Stevens, Stanley Low, J. H. Adams Keene, Fredk. Gillis, E. C. Langley, L. C. Langley, N. Gordon Unwin, Rev. W. C. Percy, Messrs. R. G. E. Unwin, Thos. S. Hunt, G. H. Kellie, Capt. Donald F. Kellie, Messrs. J. E. Fraser, W. B. Baddeley, A. R. Creedy, John Boulton, E. Bernays, S. J. Searley, Edward Unwin, Herbert W. Jordan, E. C. Austen-Leigh, Ronald Spicer, T. Atkinson, Sydney H. Greenaway, W. F. Thompson, J. Alex. Bailey, etc.

MR. HARRY BECKER has been appointed London agent for Messrs. J. W. Marshall and Co., Ltd., Springfield Mills, Bolton, Lancs, manufacturers of cover papers, manillas and casings.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,

Furnival and Co., Ltd., where offset presses are an outstanding line.

Folding machines form the central feature of the exhibit of the Canadian-American Machinery Co., Ltd., who make a convincing demonstration of the wide capabilities of their well-known British-built folding machines, of which the Cleveland Folder, which is continually being improved, is an extremely popular model.

As was, of course, a certainty, a most imposing showing of offset machinery is to be found at the large exhibit of Messrs. George Mann and Co., Ltd. A continual stream of those interested in lithographic printing is passing round the exhibits here, which include a large number of handsome rotary offset machines possessing features of unique character An out-of-the-ordinary exhibit is a rapid rotary tin printing machine, which is fitted with pile feed and self register attachment.

A fountain with water spray in action gives distinction to the exhibit of Messrs. Shuck, Maclean and Co., Ltd, whose printing inks are, of course, known throughout the trade.

A large and varied selection of beautiful specimens of the printers' work ornaments the stand of Messrs. Lorilleaux and Bolton, Ltd., and gives proof of the capabilities of the wide range of printing inks which this old-established firm is supplying to the trade, A centre of attraction on the stand is the working exhibit of the "Frequentia" colour testing lamp, which is designed to give rapid and reliable indications of the fastness to sunlight possessed by printers' colours.

Large ruling machines shown in action are a striking feature of the exhibit of Messrs. John Shaw and Sons of Honley. Several of their well-known ruling machines are being demonstrated, and there are a number of innovations which will be very interesting to all printers who have to deal with the process of ruling.

A good indication is given of the very wide range of products offered to the trade by Messrs. Usher Walker, Ltd., who, at their stand, are showing not only printing inks, rules and other products in that particular class, but also printing machinery, such as platens and folders, the working of which draws a crowd of interested spectators.

Gilbey Hall.

The prospective buyer of machinery as well as others will find plenty of appliances of an interesting character in the Gilbey Hall. This spacious enclosure is occupied by some forty well-known concerns that represent practically every branch of the printing and allied trades. It is interesting to notice that many of the exhibitors have taken positions in this hall similar to those they occupied in the 1921 Exhibition, although in nearly every case they have either augmented their displays or enlarged their stands.

Considerable amount of interest is being shown at the exhibit of Messrs. Dawson, Payne and Elliott, Ltd., where a "Cossar" patent flat bed newspaper machine is occasionally to be seen working.

Close by this stand is the display of the Victory-Kidder Printing Machine Co., Ltd. Among the principal attractions at this stand are the Kidder self-feed bed and platen printing press and the two-roll product press. Already a goodly number of printers have examined the products of this firm, among the visitors being Mr. J. R. Firth, of P. J. Firth, Ltd., Australia, who paid a visit to the Exhibition on Saturday.

The stand of Messrs. Winkler, Fallert and Co., Ltd. (whose British agent is Mr. W. J. Light) is, as usual, attracting a good deal of attention. The firm is showing many up-to-date stereotyping appliances specially suitable to the needs of the modern newspaper and general printer. Particular interest is being evinced in the Winkler patent automatic stereo plate casting machine, an appliance which casts three or four plates in a minute, the plates being ready to be placed direct on to the rotary without the necessity of any finishing by hand. Among many other attractive appliances shown are the flat plate milling machine, the automatic moulding and drying press, and the automatic rotary matrix drier. Mr. C. Winkler and Mr. C. Eulenberger are at the present time in London, and are ready to offer advice concerning their machinery.

Messrs. Smyth-Horne, Ltd., in addition to their now familiar position at the entrance to the Gilbey Hall, have taken further space in another part of this same building. Many of the firm's well-known labour saving appliances are on view and in full operation Besides the famous Seybold three-knife trimmer and the new No. 10 book sewer (which is just fresh on to the market), the firm is showing a Smyth space band, a device which is designed for the purpose of cleaning and keeping in perfect condition the space bands of Linotype and Intertype machines. With regard to this last-mentioned apparatus it is stated that there are at the present time only three in existence, and the future of the contrivance is being looked upon with a good deal of interest throughout the printing fraternity.

John Dickinson and Co., Ltd., have a very handsome stand, solid oak being largely used in its construction. The firm is showing a variety of papers, boards, envelopes and stationery, the whole being a good representative display of their various mills.

Oscar Friedheim, Ltd., are again well in evidence, having increased the number of machines they are showing compared with the 1921 Exhibition. The firm is exhibiting amongst others their latest and up-to-date simplified book sewing machine in various sizes, the thread stitching and knotting machine, a looping machine, and an entirely British cloth slitting and cross cutting machine. Their appliances are intended to serve the demands of the small bindery as well as the large one.

The Miehle Printing Press and Manufacturing Co., Ltd., are showing a wide range of machinery, including the vertical job press, a four-roller fully automatic press, and a fully automatic pony press. The vertical job press, which the makers claim to have many points of advantage, is creating a considerable amount of interest.

Intertype, Ltd., have a fine display of four Intertype machines, each of them being in full operation. Of chief interest is the "Mixer," which is being shown in this country for the first time. This machine is capable of setting eight different faces in one line, and its range of size is from five to sixty points.

Messrs. H. W. Caslon and Co., Ltd., occupy the same commanding position as in the 1921 Exhibition at the entrance of the Gilbey Hall. Their specialities cover a full range of appliances including the latest labour-saving designs of composing-room equipment in both wood and steel, composing frames, randoms, type faces, platens, guillotines, proof presses, whilst a new model Virkotype is again causing a great deal of comment.

W. Lunnon and Co., paper merchants and mill agents, are showing samples of their well known makes of typewriting papers, included their "Cobham Cream Laid," which is an esparto paper, stocked in the usual sizes and weights, and many other popular lines

The Cross Paper Feeder Co., Ltd., the well-known makers of automatic feeders, are attracting many visitors to their exhibit. There are six Cross continuous automatic feeders being used in the Exhibition—three on rotary offsets, two on letterpress work, and one on a folding machine. The firm state that 900 of these cross feeders are at present at work in this country, one firm alone having as many as 131.

Messrs. R. Hoe and Co., Ltd., are showing a four-page-wide newspaper printing unit electrically driven by a Witton-James equipment controlled by push-button stations. Frequent demonstrations of the mechanism are to be given throughout the run of the Exhibition.

Spalding and Hodge, Ltd., are showing a wide range of papers likely to be required by the printer, whether small or large. Amongst the samples of writings there are high-grade tub-sized cream laid and wove papers; bonds include the watermark British Dominion Bond, the United States Bond and the Kingsway Bond.

Wynne and Selby, Ltd., are showing inks for the offset process in great variety, and have available at the stand a wide range of brands ready for use by those who may require them whilst running their machinery at the Exhibition.

The Federation of Master Printers have a display of useful publications relating to the work of this organisation. Costing forms are available at the stand, where non-members as well as members are cordially invited to make inquiries.

The F. W. and C. B. Sheridan Co., Ltd., display a large number of appliances suited to the requirements of the up to date bindery.

The Rembrandt Intaglio Printing Co., Ltd., have a very fine exhibit of photogravures in one and three colours.

The Gallery.

The Gallery also contains many interesting and attractive stands Process Engravers' Hall is the title given to the North Gallery Annexe. Here the Federation of Master Process Engravers have prepared a comprehensive exhibit. Moreover, the ample space has been specially decorated and furnished, so that a very welcome rest can be obtained.

Individual members display some of their work, and the beautiful effects which can be obtained by modern methods are also shown. Black and white and three and four colour work is demonstrated, together with commercial work of great variety. Photogravure methods are a feature of this exhibit.

Gummed papers are a conspicuous item, the stands of Messrs. Samuel Jones and Co., Ltd., and the Gummed Paper Manufacturing Co. being side by side. Paper in infinite variety is shown by the firm which adopts the "Camberwell Beauty" butterfly as its trade mark. Some wonderful effects in fancy papers are shown, it requiring a special stand to display the stationery products alone. Non-curling gummed papers and tapes, sealing machines and other ingenious devices are included.

The Gummed Paper Manufacturing Co. exhibit their well-known "Tiger-Tiger" brands. There are glued stay papers, sealing paper, linen and cambric tapes and a variety of up-to-date sealing machines. Particular attention is called to their super sealer, which, while retaining the basic principle of their former De-Luxe Sealer, is refined to ensure greater efficiency in operation, ease of refilling, and is certainly more attractive in appearance than the former models for the high class departmental shop or store. The machine itself can be loaded in less than two seconds. One easy stroke of the lever ejects the tape, moistens it, and cuts it off to the desired length, a factor which is of great importance in standardised packing.

Papers of high quality are shown by Portals, Ltd., who have carried on papermaking for over 200 years, having been founded by Henri de Portal in 1719. The firm are distinguished by the fact that they make paper by the three known processes — hand-made, mould-made and Fourdrinier. Examples of the products by these methods, beautifully finished and adapted to various purposes, are displayed, including Portal standard watermarked lines. A feature of the service is the attention given to packing of reams, and those on view demonstrate this to perfection.

A fine assortment of leathers are to be found on the stand of Messrs. Nickerson Bros., whose factory at Bermondsey turns out this prepared material in styles specially suited to the bookbinder. Various kinds of leather are shown in the numerous styles, finishes and shades that have brought leather manufacture to a fine art.

J. Bancroft and Sons Co., of whom Messrs. Nickerson are sole selling agents in Great Britain and Ireland, exhibit various exclusive lines of book cloths, specimens of the famous Legal Buckram being shown.

The Oriental Leather and Leatherette Co. (1908), Ltd., have a large assortment of special papers and leather substitutes which appeal to boxmakers, bookbinders, printers and others.

In the Princes Gallery the London Master Printers' Association have an exhibition of specimens of fine printing submitted by their members in the Inter-District Competition for the Challenge Cup. These cover a wide range of various processes both in colour and in black and white, and should not be missed by any lover of good printing. Covering practically all printing processes, and exemplifying innumerable varieties of craftsmanship, the exhibition is a striking demonstration of the capabilities of London printers.

The Challenge Cup (which we illustrate herewith) has been awarded by the Adjudicating Committee to the West and North West Association, and will, we understand, be presented on the occasion of the official visit of the L.M.P.A. to the Exhibition on Wednesday, May 27th.

There is also a very praiseworthy display by the London School of Printing, a long wall in the gallery being effectively filled by specimens of practical work done by the students. Included are artistically tooled letterpress books, stationery binding and publisher's work, together with colour work, products of the photo-litho-offset process, and layouts and designs for advertisements. Prince Henry's attention was called to this section as demonstrating the value of technical education.

Messrs. Stephenson, Blake and Co. make a very effective wall display, showing the character of various types. The arrangement

Digitized by Google

is in excellent taste, simplicity and boldness going hand in hand.

Tastefully and appropriately decorated in light blue and gold, the stand of Messrs. Stonhill and Gillis is furnished with a number of publications valuable to the printer and allied trader. This is in addition to the *British and Colonial Printer and Stationer* (founded in 1878) and the *World's Paper Trade Review* (established in 1879). These weekly journals, which serve the trades mentioned faithfully and well, are to be found on Stands Nos. 51 and 52 in the Gallery, together with books on printing, papermaking, bookbinding, waste paper recovery, not forgetting the useful brochure, "A Dictionary of Paper Terms." A welcome is extended to visitors, and there are opportunities for resting. Much attention is being attracted by the miniature edition of the *British and Colonial Printer and Stationer*, to which reference is made in another column in this issue.

That Messrs. Langley and Sons, the Euston Press, have made a special study of poster printing is clearly seen in the few but striking examples they have on view. In conception and execution the work is excellent.

Printing benevolence is a conspicuous feature of the Gallery. The Lloyd Memorial Home, the Caxton Convalescent Home, the Printers' Pension Corporation, and the Printers' Medical Aid and Sanitoria Association all demonstrate their valuable activities on behalf of members of the craft whose health and infirmities require attention.

As an aid to modern lithographic and photo-engraving establishments the Ben Day Shading Mediums are important. The mediums represent a wide range of line tints, hand and mechanical stipples, fine half-tone tints, and grains and textures—the latter specially adaptable for fashion illustrations or background effects for bold letter advertisements.

It is interesting to note the presence of the Printing Trades Alliance, the officers of which are anxious to spread the knowledge of their conciliatory principles.

Limitations of space forbid an exhaustive account here of all the stands in the Gallery, but the complete modern bag manufactory in operation, set up by Hartmann Bros., should not be overlooked.

Mr. J. L. Wilson Goode, H.M. Trade Commissioner, in a report on the British West Indies and Central America, states that both in paper and stationery the question of price is of paramount importance, and there is practically no demand for high-class productions. America has most of the trade in typewriting materials and pencils, and Holland in strawboards, but in other lines cheap British goods are in fair demand, though many of them have to compete with job lines from other countries.

Worshipful Company of Stationers.

Visit to the Printing Exhibition.

The Worshipful Company of Stationers paid an official visit to the Printing Exhibition on Monday afternoon. Needless to say the members, interested in all processes that are brought into requisition to produce the printed book or publication, keenly studied the exhibits and were greatly impressed with their representative character, excellence of design and the great progress made since the last exhibition.

The party, on the invitation of Mr. F. W. Bridges, assembled for tea at 4 o'clock, when Mr. Bridges extended to them a cordial welcome. He was sure the Exhibition would provide a great deal that was interesting, and he remarked that the Stationers' Company was one of the oldest institutions identified with the printing and allied trades. The Company stood out prominently as exercising a great influence in connection with the industry, and they would be glad to know that the present Exhibition was one of the finest held in any part of the world. Their colonies looked to the old country to take a lead, and the improved machinery and appliances on view would, no doubt, be keenly studied by visitors from abroad.

Mr. Richard Bentley, the Master of the Stationers' Company, expressed to Mr. Bridges their appreciation of his hopitality, and also congratulated him on the arrangement of such an excellent exhibition. It was most fitting that it should be held in London. The printing industry was one of great importance, and the value of the Exhibition could not be overestimated. It brought visitors from the provinces and also from overseas, and created a favourable impression of the great advance made by British manufacturers in supplying mechanical and other devices which, from the point of view of simplicity and economy, augured well for the future of the great printing and allied industries of this country.

The party included the following:—Messrs. R. A. Austen-Leigh, R. H. Stevens, Stanley Low, J. H. Adams Keene, Fredk. Gillis, E. C. Langley, L. C. Langley, N. Gordon Unwin, Rev. W. C. Percy, Messrs. R. G. E. Unwin, Thos. S. Hunt, G. H. Kellie, Capt. Donald F. Kellie, Messrs. J. E. Fraser, W. B. Baddeley, A. R. Creedy, John Boulton, E. Bernays, S. J. Searley, Edward Unwin, Herbert W. Jordan, E. C. Austen-Leigh, Ronald Spicer, T. Atkinson, Sydney H. Greenaway, W. F. Thompson, J. Alex. Bailey, etc.

Mr. Harry Becker has been appointed London agent for Messrs. J. W. Marshall and Co., Ltd., Springfield Mills, Bolton, Lancs, manufacturers of cover papers, manillas and casings.

London Inter-District Printing Competition Challenge Cup.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous,

One Insertion 3/0
Three Insertions 6/0
***For every line exceeding three lines* 6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

The Printing Exhibition.

BUSINESS is going forward briskly at the Printing Exhibition which was so auspiciously inaugurated by Prince Henry on Saturday. There has been gathered together in the Agricultural Hall a striking collection of machinery, appliances and supplies; and it is attractive alike to the expert and the layman. The Exhibition demonstrates very thoroughly how much thought and enterprise are being put into the industry to enable it to cope with the extensive and exacting work which is thrown upon it in these days of persistent and engrossing publicity. The newspaper presses, although but small examples of the larger installations in actual practice, are sufficient to indicate some of the requirements in this vast field. On the general printing side the displays are particularly illuminating, and the resources which have grown up in the photo-litho-offset section are well illustrated. In this connection the novelty of the show has been the new text typing machine, although in many phases the latest methods of producing print or the materials of the printer are manifold. That the fixture induces real business was apparent early this week when a great many of the machines and other supplies had already been sold. These transactions were pleasing in themselves; but there was served the even more important purpose of making acquaintance which would result in connections of a more permanent sort. A feature of the Exhibition has been the number of visitors from overseas; and as these are identified with the printing industry in their own country, there is every prospect of an extension of markets for British manufacturers—if not immediately, at least in the days to come.

* * *

April's Paper Imports.

THE general depression in trade throughout the country is reflected in the Board of Trade Returns just issued. Imports and exports of paper tell the same tale. April imports—1,054,269 cwts.—were the lowest monthly figure since June, when they amounted to 936,774 cwts, and represent a decrease of 225,324 cwts. (17·6 per cent.) from the corresponding figure last year. Compared with April two years, however, last month's total was up by 147,412 cwts. (16·2 per cent.). Except for a very slight increase in the deliveries of coated papers, all the enumerated classes of imports declined during the month compared with April, 1924. Strawboards (329,852 cwts. declined to the extent of 158,564 cwts.; packings and wrappings (294,143 cwts.) show a drop of 4,305 cwts.; printings (264,830 cwts) fell off by 60,822 cwts., whilst millboards (93,160 cwts.) were below the figure of April last year by 22,539 cwts. The total value of the imports during the month—£1,067,422—indicates a decrease of £95,448 (8·2 per cent.) contrasted with April last year, but compared with the same month two years ago there is an advance of £84,175 (9·5 per cent.). During the four months ended April, paper and cardboard imports reached a total of 4,522,750 cwts., an increase of 587,094 cwts. compared with the corresponding period a year ago. In value the month's imports—£4,613,293—reveal an advance of £527,682 (10·4 per cent.).

* * *

Sources of Supply.

IN that important item of imports, packings and wrappings, Sweden (75,397 cwts.) was the largest contributor during the month, although shipments from that country show a big drop of 69,227 cwts. Germany (75,306 cwts.) surpassed her consignments of twelve months ago by 13,155 cwts., whilst Norway's contribution during April (74,751 cwts.) showed a big increase of 49,935 cwts. Finland (26,838 cwts.) supplied this country more freely during the month, exceeding her shipments of twelve months ago by 2,958 cwts. Norway took the leading place amongst the suppliers of printings in April with a total of 74,403 cwts., a very substantial increase of 60,987 cwts. compared with twelve months ago. Finland came next (55,506 cwts.), but her total is down by 36,351 cwts. The third place was occupied by Newfoundland (43,260 cwts.), where there was a drop of 29,780 cwts. Both Germany (22,953 cwts) and Sweden (21,385 cwts.) sent less, the decline of 70,889 cwts. from the latter country being particularly noteworthy. During April last year Canada is not credited with sending to the British market any printings, which makes it interesting to observe that 16,559 cwts. were received last month from that Dominion.

* * *

Paper Exports.

EXPORTS of British paper and cardboard last month—376,635 cwts.—though the lowest monthly figure since June, indicate an improvement compared with April of the two preceding years. Contrasted with April, 1924 they show an advance of 44,926 cwts. (13·5 per cent.), whilst compared with the same month of 1923 they were better to the extent of 16,604 cwts. (4·6 per cent.). Printings (277,102 cwts.) represented well over 70 per cent. of the total quantity of paper and cardboard manufactures sent overseas last month, and were higher than the figure of April last year by 77,103 cwts. Packings and wrappings (14,185 cwts.) show a considerable falling off, and were down by some 37,000 cwts. compared with the shipments of twelve months ago. Writings (14,862 cwts) improved to the extent of 1,823 cwts., whilst millboards (11,474 cwts.) declined by 6,484 cwts. The value of the exports last month—£726,707—were up by £88,358 (13·8 per cent.) contrasted with April twelve months ago and by £52,996 (7·8 per cent.) compared with the same month two years ago. During January to April exports amounted to 1,607,426 cwts. (£3,183,369), advances of 188,511 cwts (13·2 per cent.) in quantity and of £346,370 (12·2 per cent.) in value compared with the shipments for the corresponding period last year.

Central London Master Printers.

Annual General Meeting.

The London Central Districts Master Printers' Association held its seventh annual general meeting in the Board Room of the London Master Printers' Association, Old Bailey, on Monday evening.

The chair was occupied by Mr. R. A. Austen-Leigh (vice-president) who was supported by the hon. secretary, Mr. W. J. Boyle, Mr. A. Willmott, Mr. W. Whyte (secretary, L.M.P.A.) and Mr. J. Johnson (organiser).

Successful Lectures.

After the approval of the minutes of the last annual meeting, and the reading of apologies from several absentees, the secretary presented the annual report. This recorded a very fruitful year's work, and put on record that the series of lectures arranged had proved most successful, whilst the accompanying exhibits of specimens loaned by leading firms had been most comprehensive. The lectures included those by Mr. W. T. Wilkinson and Mr. R. Caffyn on "Collotype"; by Mr. H. J. Astell Burt on "Law"; by Mr. William Gamble on "Photo-Engraving and Photo-Offset"; by Mr. F. J. Melville on "Postage Stamp Printing"; and by Mr. R. B. Fishenden on "Photogravure." There had also been held a very successful bohemian concert. The report put on record the Association's thanks to Mr. Johnson for the zealous way in which he had assisted the hon. secretary in his duties, also to the representative of the *British and Colonial Printer and Stationer* for the very able manner in which he had reported the proceedings of the Association. The membership showed an increase on the year.

The report was unanimously adopted, and the financial statement was next presented by the secretary—in the unavoidable absence of Mr. J. Crowlesmith, J.P., hon. treasurer. Whilst the accounts showed a slight increase of expenditure, owing to greater activity in the matter of lectures, etc., the state of affairs was regarded as very satisfactory and the accounts were unanimously approved.

New Officers Elected.

The election of officers and executive committee was the next business.

As president for the coming year, Mr. R. A. Austen-Leigh was elected to succeed Mr. George Eaton Hart.

Mr. Alfred Blades was elected a vice-president in addition to Mr. W. H. Burchell, Sir Cecil Harrison and Mr. W. Howard Hazell.

Mr. J. Crowlesmith was re-elected treasurer.

On the proposition of the chairman, who made very cordial reference to Mr. Boyle's past services as hon. secretary of the Association, Mr. Boyle was unanimously re-elected to serve in the same capacity.

The executive committee will consist of Mr. Arthur Bonner, Capt. W. Vincent Brooks, M.C., Mr. H. Basil Cahusac, Mr. W. Charles, Mr. H. R. Danford, Mr. William Ede, Mr. E. Edkins, Mr. Geoffrey C. Griffith, Lt.-Col. B. L. Hooper, Mr. T. F. Howard, Mr. Herbert W. Jordan, Mr. Charles Orchard, Mr. O. G. Poulson, Mr. Percy W. Ryde, F.R.G.S., Mr. A. C. Shaw, Col. Roy F. Truscott, Mr. F. W. White, Mr. A. Willmott and Mr. W. H. Wass.

The representatives on the L.M.P.A. council were re-elected.

A Wages Conference.

The formal business being concluded, Mr. Ryde gave the meeting an interesting report of the recent conference between the Federation of Master Printers and the executive of the London Society of Compositors to consider the application by the Society for a wage increase of 7s. per week, and to discuss the apprenticeship question.

Mr. Ryde's report was briefly supplemented by Mr. Austen-Leigh, and the meeting concluded with the passing of votes of thanks to the retiring president, Mr. George Eaton Hart, for his services during his two years of office, and to the new president for his occupancy of the chair that evening.

Personal.

MESSRS. GEORGE EATON HART, H. B. Naylor and J. R. Riddell constituted the adjudicating committee which met at the L.M.P.A. headquarters to consider the exhibits in the London Inter-District Printing Competition. The challenge trophy, which was awarded to the West and North-West M.P.A., is shown on another page of this issue.

RETURNING from the Federation meetings last week, Mr. Williamson, the Federation costing secretary, was taken ill in the train and was unable to move from Stockport station for three hours. He ultimately reached his father-in-law's home, where a doctor was called in and diagnosed the illness as ptomaine poisoning. He has not yet been able to get back to business.

MR. E. H. DENNIS, of Scarborough, has been elected president of the Yorkshire Alliance of Master Printers.

MR. S. NICHOLSON, of Modern Printers, Ltd., has been elected president of the Hull Master Printers' Association for the ensuing twelve months, with Mr. F. Harland as past president and Mr. W. J. Edwards, vice-president.

MR. JOHN CORKETT, B.Sc., son of Mr. Frederic T. Corkett, has accepted a seat on the board of Pictorial Machinery, Limited, of which his father is director.

IT will be chiefly the mechanical and electrical side of the business that Mr. John Corkett will look after. He comes from the Miller Saw-Trimmer Co., of Pittsburgh, Pa., and takes up his new duties as from July 1st.

MR. CHARLES E. KING, chairman of directors of the *Middlesex Advertiser and County Gazette*, and of Messrs. King and Hutchings, Ltd., Uxbridge, has been appointed a Justice of the Peace for the County of Middlesex.

LIEUT.-COL. E. F. LAWSON, of the *Daily Telegraph*, will give a lecture on "Journalism as a Business" to the students of the journalism section at the University of London on Tuesday, June 2nd.

MR. C. W. D. RIDDELL, editor of the *Zululand Times*, is combining holiday with business in visiting the Old Country where he completed his apprenticeship to the printing trade some twenty years ago. His visit, which has just commenced, will occupy about three months.

MR. RIDDELL planned his itinerary so as to include the Printing Exhibition and utilise the opportunity of noting the latest developments in printing machinery and supplies. He is also representing the "Natal and Zululand Annual," a development of the "*Zululand Times* Annual."

THE *Zululand Times* is published at Eshowe, the capital of Zululand, and the printing office is run on up-to-date lines. It is interesting to learn that there are big possibilities of development, as Eshowe is attracting increasing numbers of European settlers, particularly in view of the opportunities it offers in regard to cotton.

MR. HUGH W. DAWSON, of Edinburgh, has been nominated by the Bristol branch of the Institute of Journalists as president of the Institute for 1926.

MR. WATKIN DAVIES, M.A., has been appointed editor of the *Welsh Outlook*, in succession to Mr. T. H. Davies, B.Sc.

MR. A. L. WOODHEAD (president), Mr. H C. Derwent, Mr. D. A. Duncan and Mr. Valentine Knapp (treasurer) have been elected to represent the Newspaper Society on the Joint Industrial Council of the Printing and Allied Trades.

MR. HERBERT GREEN, Treasurer of the Papermakers' Association, contributes to the *Tovil News* an interesting account of his recent holiday in Algiers.

Odhams Press, Ltd.

The fifth annual general meeting of Odhams Press, Ltd., was held on Thursday at the Hotel Cecil.

Lieut.-Col. W. Grant Morden, J.P., M.P. (the chairman), said that the net profit for the past year amounted to £102,923, compared with £88,689 in 1923 and £71,144 in 1922. He proceeded to report progress in respect of *John Bull*, the *Sporting Life*, the *Sportsman*, the *Ideal Home*, the *Broadcaster*, and *Coming Fashions*. The Borough Billposting Co. had again more than justified itself. The printing department—the unobtrusive foundation upon which the firm was founded—had, in spite of severe competition, maintained its position in a satisfactory manner.

For the last two years Odhams Press had printed the well-known and old-established Sunday newspaper the *People*, and two or three months ago they entered into an agreement by which they acquired 79 per cent. of the shares in the new company controlling it. Already the circulation had very rapidly advanced, and they had good reason to anticipate that this paper would prove one of the most profitable of the company's larger ventures.

The report was unanimously adoped.

PRINTING, STATIONERY AND ALLIED TRADES EXHIBITION.

THE NOVELTY OF THE EXHIBITION WILL BE

The Miniature Issue of "The British & Colonial Printer & Stationer,"

DATED APRIL 16th, 1925, which has been reproduced by

LOWE & BRYDONE (Printers), LTD.,

101-4, PARK STREET, CAMDEN TOWN, N.W.10,

BY THE NOVOGRAPHIC PROCESS.

DIVIDENDS AND REPORTS.

ALLIED NEWSPAPERS. — The company, which was registered on March 24th, 1924, commenced trading three days later. It received the benefit of the profits of the business acquired from January 1st, 1924, and the report now issued covers the trading for the full twelve months to December 28th, 1924. After providing for depreciation, the profit totals £895,592, of which £65,390 is absorbed by interest on purchase consideration, and on debenture stock, etc. The sum of £11,400 is placed to corporation tax reserve, and after providing for No. 1 preference dividend to September 30th, 1924, there remains £664,553, subject to income-tax. The directors recommend that £469,674, being the amount standing in the balance-sheet in respect of preliminary and formation expenses, shall be placed to general reserve, and the balance of £194,878 (subject to income-tax) carried forward. It has been decided by the board to declare an interim dividend on the ordinary shares of 5 per cent., less tax, payable June 3rd, in respect of the year 1925.

CHARLES MORGAN AND CO., LTD. — The accounts of Charles Morgan and Co. for 1924 show a profit of £1,312, which compares with £6,099 for 1923. The accumulated debit on profit and loss is reduced to £26,715. The report states that the turnover continues to increase, but the margin of gross profit is small owing to severe competition, especially in the export trade.

FORD PAPER WORKS.—The report of the Ford Paper Works (1923), Ltd., for year ending December 31st, 1924, shows a profit of £3,301 15s. 1d.. which, together with the amount of £602 8s. 4d. brought forward from 1923, the directors recommend, should be carried forward. The bank loan secured by second charge debentures has been reduced by £10,400.

ST. MAURICE PAPER CO.—Report for 1924 shows profits after all charges, including interest and discount on new note issue, equal to 7·7 per cent. on capital stock. This compares with 12·7 per cent. in 1923, when, however, there was no note interest to pay. Operating profits amounted to $1,046,198, compared with $1,253,431 in 1923. Deducting depreciation $269,760, interest on notes $91,173, discount on notes $2,154, net profit is $743,108. Dividends at rate of 6 per cent. on $9,539,300 of capital stock required $572,358, leaving $170,750 to be carried forward, making amount at credit of profit and loss $1,029,952.

NEW COMPANIES.

WALTERS' CENTRAL NEWSAGENCY, LTD.—Capital £2,000; wholesale and export newsagents, booksellers, publishers, stationers, etc. Private company. Directors: J. Mercer and D. W. Mercer. Solicitors: A. G. F. Machin, 17-19, George-street, West Luton.

JOHNSON'S CENTRAL NEWSAGENCY, LTD.—Capital £1,000; wholesale and exports newsagents, booksellers, publishers and stationers, etc. Private company. Directors: J. Mercer and V. Vickey. Solicitors: A. G. F. Machin, 17-19, George-street, West Luton.

BURGESS BROTHERS, LTD.—Capital £1,000; manufacturers of and dealers in stationery and goods, wrapping paper, account and other books, paper bags, cardboard boxes and cartons, twines and labels, paper importers and exporters, printers, etc. Private company. Permanent directors: L. P. Burgess and W. J. Burgess. Registered office: 112, King-street, Egremont, Wallasey.

CLOUGHER CORPORATION, LTD. — Capital £1,000, in £1 shares; to carry on commercial research and the business of consultants, representatives of newspapers and publications, literary agents, copy writers, designers, printers, publishers, etc. Private company. Directors: T. R. Clougher and N. M. Clougher. Registered office: 20, Craven-street, Strand, W.C.2.

LAYTON DAVEY, LTD.—Capital £250 in £1 shares; billposters, advertising agents and contractors, printers, stationers, lithographers, etc. Private company. Directors: H. E. Hayward and L. A. Davey. Registered office: 101, Brixton-hill, S.W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HAYWARD AND MARTIN, LTD. (paper merchants, wholesale stationers, etc., London).—Particulars filed of £500 debentures authorised April 28th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount now being issued.

E. AND C. UNDERWOOD, LTD. (printers and manufacturing stationers, etc., London).—Debenture dated May 4th, 1925, to secure £750, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: A. J. George, 16, Nelson-terrace, N.1.

CELTIC NEWS, LTD.-Particulars filed of £1,000 debentures authorised May 1st, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

RICHARD HERRING AND CO., LTD. (stationers, paper merchants, agents, manufacturers, etc. —Charge on 27, Upper Thames-street, E.C., dated May 1st, 1925, to secure all moneys due or to become due from the company to the Bank of Liverpool and Martins, Ltd., not exceeding £10,000.

HILL, PALMER AND CO., LTD. (manufacturers of paper boxes, twine, etc., London).—Satisfaction in full on April 16th, 1925, of debenture dated September 23rd, 1924, securing £100.

NORFOLK PRESS SYNDICATE, LTD.—Particulars filed of £3,500 debentures (including £1,000 already registered), authorised April 21st, 1925, charged on the company's undertaking and property, present and future, the amount of the present issue being £2,500.

TURF PUBLISHERS, LTD.—Particulars filed of £1,000 debentures authorised April 23rd, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

COMLEYS, LTD. (auctioneers, printers, stationers, paper bag makers, etc., Manchester).—Debenture dated April 20, 1925, to secure £300 charged on the company's property, present and future. Holder: Martha Comley, 102 Ayres-road, Old Trafford, Manchester.

WALTER WEBSTER, LTD. (manufacturers of, and dealers in, paper, etc., Southwark).—Issue on May 1st, 1925, of £300 debentures, part of a series already registered.

RECEIVER APPOINTED OR RELEASED.

SCUNTHORPE AND FRODINGHAM TIMES CO., LTD.—S. M. Forrester, of 1, Town Hall-street, Grimsby, ceased to act as receiver or manager on May 5th, 1925.

BANKRUPTCY.

Re F. H. MOSELEY.—At the Birmingham County Court, on May 15th, Mr. W. J. Rabnett made an application to his Honour Judge Amphlett, K.C., for the discharge from bankruptcy of Frederick Henry Moseley, who was lodging at 13, Albany-road, Harborne, and carrying on business as a printer at the Phœnix Walker Press, 51, Lower Essex-street. The receiving order was made in August, 1924, and the creditors, it was stated by the official receiver (Mr. T. Easton) were paid a first and final dividend of 11s. 3½d. in the £. His Honour assented to the discharge being granted subject to judgment for £7 10s. being entered against debtor and ordered the discharge subject to the payment of £2 10s. of the money within seven days and the balance by £1 per month.

Paper Agent's Discharge.

An application for an order of discharge was made on May 6th to Mr. Registrar Hope, at the London Bankruptcy Court, on behalf of Karl Gustav Herman Berlin, paper agent and merchant, 3, Laurence Pounty-hill, E.C. Mr. Waterer, official receiver, reported that the applicant failed in August, 1924, with ranking liabilities £5,893; the assets had realised £116, whilst a further sum of £100 might be received in respect of certain household furniture. The bankrupt commenced business in January, 1915, with about £100 capital, at 57, Gracechurch-street, removing to Laurence Pountney-hill in 1918. He was joined in partnership in October, 1919, by one Ridley, who put £200 into the business, and they traded as "Berlin, Ridley and Co." till March, 1921, when the partnership was dissolved, and all debts discharged. The debtor also paid his outgoing partner £225, and continued the business alone until the failure, which he attributed to lack of capital and depression in trade. The offences reported by the official receiver were (1) insufficiency of assets to equal 10s. in the £ on the amount of the liabilities; (2) omission to keep proper books of account; and (3) trading with knowledge of insolvency. His Honour upheld the report, and suspended the discharge for two years and six months.

Bridge Paper Mills, Ltd.

Mr. H. E. Burgess, Senior Official Receiver and Liquidator of the above company (registered office, 1, Wellington-street, Strand, London, W.C.), gives notice of an application for release.

The total receipts from date of winding-up order amount to £27 3s. 9d. (unpaid calls), and after meeting costs and charges the balance is 3s. 6d.

In his statement, dated May 11th, 1925, Mr. Burgess says: "The facts relating to the promotion of the company and the conduct of its business were considered, but in the opinion of the official receiver the evidence available was not sufficient to justify proceedings against any of the parties concerned. The assets did not realise sufficient to pay the costs of the petition in full, and there is no prospect whatever of funds becoming available for distribution amongst the creditors and shareholders. Creditors and contributories can obtain any further information by inquiry at the Department of the Official Receivers, 33, Carey-street, Lincoln's-inn, London, W.C.2."

Federation of Master Printers.

Important Problems Discussed at Buxton.

Speaking at the annual meeting of the Federation of Master Printers at Buxton on Tuesday, May 12th, Mr. W. B. Wykes, the retiring president, said the Government Committee which had inquired into the question of State printing was expected shortly to present its report, but it was satisfactory to know that in the House of Commons during the previous week a resolution moved by Sir Arthur Holbrook (a member of the Federation), expressing strong disapproval of State trading, had been carried by a substantial majority. The Budget, which had contained so many surprises, had not contained the one which would have helped all industries, and the printing industry in particular—the restoration of the penny post. An estimated surplus of £4,000,000 was good grounds for continuing to press for a reduction of postal charges.

Following upon the election of Mr. W. Howard Hazell as president for the ensuing year, Mr. A. Langley (president of the London Master Printers' Association), extended an invitation to the Federation to accept the hospitality of the L.M.P.A. for its annual meeting in 1926.

Apprenticeship and Labour Supply.

Mr. W. Howard Hazell (president-elect), speaking on the apprenticeship problem, said the possibility of shortage of labour in the printing industry within a few years was a serious one. Prior to the war the expectation of service in the industry of men was 26 years from the age of 21, resulting from the number who left the trade, took up positions of foremen, etc., or became master printers, and who emigrated, and for women 13 years from the age of 18. As a result of the war, the latest census figures showed that the number of men in the age group 20–25, who were apprentices during the war when the number of apprentices who were engaged was reduced, were less in proportion to the older men than pre-war. The age group 25-45 showed a much smaller proportion to the rest, owing to the fact that 10 per cent. of the young men who went to the war were either killed or permanently disabled. In the age group over 45 alone was there an increase. In dealing with a question such as this, it was essential to have facts and that any rearrangement of the apprenticeship rules and regulations should be carried through on a fair and sensible basis in agreement with the trade unions. It would be necessary for the employers to prove that the future needs of the industry, not this year or next, but 7, 14 and 21 years ahead, demanded an alteration of regulations to meet the altered circumstances due to the war. The men and women employed in the printing industry had increased during the past 30 years faster in proportion than the population; and if the trade was to progress at the same rate, there would be a serious shortage in a few years, especially when trade improved. In the meantime it was essential that every employer should take the greatest number of apprentices permitted under the present regulations.

Mr. H. A. Bethell (Manchester—chairman of the J.I.C. Organisation Committee), thought that the solution of the problem lay through the Joint Industrial Council and the setting up of district committees. It was only through that channel that they could be assured of apprentices being properly trained and of the question having the fullest consideration.

Mr. F. Murrell (Cardiff) and Mr. J. Murdoch (Glasgow) urged that consideration should be given to the right quality of boy being brought into the industry.

The following resolution was carried:—"This meeting urges all master printers at once to supply to the Federation the details of their employees, so that the number of apprentices needed for the industry may be examined, and asks the Federation to take steps, if necessary, to amend the present ratio of apprentices to journeymen."

Labour Situation.

Lieut.-Colonel H. Rivers Fletcher (chairman Federation Labour Committee), reviewing the labour situation, referred to the inroads made into the printing industry in England by foreign competition. While the Labour Committee was desirous of giving to the workers the highest wag s and the best working conditions they possibly could, it must be realised that if they exceeded a certain limit they would put up the cost of printing to such an extent that it would have the effect of curtailing the amount of printing that was done, which would not be either to the advantage of the employer or the worker. The period of stabilisation in wages that they had been able to secure had enabled the employers to get more work and to gain the confidence of their customers, to the benfit of the whole industry.

Annual Dinner.

The Federation annual dinner took place at the Buxton Pavilion on Tuesday evening, just over 500 members and their ladies and other visitors being present. The chair was occupied by Mr. W. B. Wykes, who was supported by Mrs. G. D. Wykes, the Mayor of Buxton and Mrs. Buckley, the Mayor of Leicester and Mrs. Simpson, Canon and Mrs. C. E. Scott-Moncrieff, Lieut.-Colonel H. R. Rivers Fletcher, Mr. H. Bradly (National Association of Wholesale Stationers and Paper Merchants), Mr. and Mrs. H. Cooke, Sir Cecil R. Harrison, Brigadier General W. Wright Bemrose, Mr. and Mrs. A. Langley, Mr. and Mrs. H. G. Clarke, Mr. and Mrs. J. D. Ruddock, Mr. R. A. Austen-Leigh, Colonel and Mrs. H. K. Stephenson, Mr. and Mrs. W. Howard Hazell, Dr. W. B. Blaikie, Sir Meredith T. Whittaker, Mr. and Mrs. J. A. Stembridge, Mr. A. H. Walker, Mr. and Mrs. E. H. Dennis, Mr. E. W.Humphries, Mr. and Mrs. J. J. Keliher, Mr. and Mrs. A. E. Goodwin, Mr. F. L. Armstrong, etc. The Duke of Devonshire was prevented from attending owing to illness.

The important toast of "The Federation" was proposed by the Mayor of Buxton, who said printing had brought into the homes of even the very poorest the greatest masterpieces of literature, and to cheap editions the culture and other qualities of the nation owed a great debt.

Mr. W. B. Wykes (president of the Federation), responded to the toast and commented on the fact that for the first time the six past presidents present were wearing the new past-presidential badges. Before the unhappy disagreement in London a few weeks ago, the Joint Industrial Council for the printing industry had stood head and shoulders above any other J.I.C., but the outstanding feature of the year was that as a result of that dispute the authority of the J.I.C. had been still more strengthened.

Mr. W. Howard Hazell (president-elect), who also responded to the toast, referred to the new offices of the Federation in Old Bailey on a top floor facing the grandest dome in the British Empire as a symbol of the high aspirations and lofty ideals of the Federation. Industry might be compared to a three-legged stool, with capital, management and labour as the three legs. If one of the legs were inefficient or insufficient the industry would fall to the ground. Those present represented the management and part of the capital—unfortunately not all the capital—and their success as leaders in the industry depended on the success and wisdom with which they used the capital and guided labour. Anything the Federation could do to strengthen the management, to bring better conditions into the industry, led ultimately to the prosperity of the industry and the well-being of all those connected with it.

The toast of "The Visitors" was proposed by Brig.-Gen. W. Wright Bemrose, and the Mayor of Leicester responded.

Mr. R. A. Austen-Leigh proposed the toast of "The Chairman," and concluded a eulogium with an appreciation of Mr. Wykes's perpetual cheerfulness in emergencies.

Mr. Wykes, in replying, expressed thanks for the support given him by his colleagues in the Midlands, by Mr. D. R. King, secretary of the Midland Alliance, and to his brother, Mr. Gerald D. Wykes, and his other co-directors who had made it possible for him to hold the office of president.

Before the company dispersed, they witnessed a special cinema film which had been taken of the Federation in Buxton.

Visit to Linotype Works.

The whole of Wednesday was spent in a visit to the works of Messrs. Linotype and Machinery Ltd., the company being conveyed to Altrincham in motor coaches. They were received on arrival by Mr. and Mrs. A. H. Walker and were immediately entertained at lunch in a marquee in the grounds.

Mr. Walker presided, and in expressing the pleasure it gave them to welcome the Federation, he said it was his business to know what was happening in almost all countries of the world, and there was no other organisation doing better work.

Mr. Wykes, in acknowledging the welcome, said the printing trade need fear no foreign competition while they had the services, brains and enterprise of firms such as that of which Mr. Walker was managing director.

The company were then conducted in parties of twenty-five around the extensive works where the linotype and the printing machines produced by the firm are made in their entirety. From the smallest screw, and the keys of the linotype keyboard, to the moulding of the largest pieces of metal, there is plant under the roof of the factory to evolve the ingenious typesetting machine, the world-famed printing machines, and the stereo-plate machines from the raw materials. The testing departments, where microscopic measurements are dealt with, were indications of the marvellous accuracy that is achieved and the attention that is given.

At the conclusion of the visit, the company returned to the marquee for tea. Mr. W. Howard Hazell, president-elect of the Federation, took the opportunity of expressing thanks for the privelege the members of the Federation had had to see the manufacture of the wonderful machines that worked with almost human intelligence and dexterity, and Mr. Walker briefly acknowledged these remarks.

On Tuesday afternoon a visit had been paid to Chatsworth, the seat of the Duke of Devonshire, and Haddon Hall, and on Wednesday evening, after the return from Altrincham, the last event of the gatherings took place with a dance and whist drive at the Palace Hotel, Buxton. During the evening trophies were presented to the winners of the golf competitions, and the announcement was made that Major W. I. Burch, of the Lanston Monotype Corporation, had promised to present replicas to the winners that year and last year of the Master Printers' Championship (presented by Mr. A. F. Blades) and the Master Printers' Handicap Challenge Cup (presented by Mr. W. Howard Hazell). The dance finished at 11 o'clock, and the gatherings at Buxton—among the most successful annual meetings in the history of the Federation—were brought to a conclusion with the singing of Auld Lang Syne.

Paper Boxes.

Meeting a Growing Demand.

The increasing demand for paper containers for merchandising all kinds of articles is evident from census reports on the paper-box industry. While output is reported by value only, these figures when taken in connection with the number of establishments and the number of wage-earners give a fairly reliable index of progress. In 1923 the number of establishments engaged primarily in the manufacture of paper boxes in the United States, including a few producing fancy tin and fabric-covered boxes, was 1,219, the highest on record, although not much above the number in 1919. The average number of wage-earners likewise stood at a record figure slightly above that of 1919. From 1914 to 1923 the number of establishments increased by 176 and the wage-earners by 11,000.

Total value of output, exclusive of boxes manufactured by plants engaged mainly in the production of other articles, increased from $206,000,000 in 1919 to $258,000,000 in 1923, or by 25 per cent. The increase in output over the pre-war period is obscured on the value basis by changes in the price level. During the depression of 1921 products were valued at only $174,000,000 and there was a decline not only in the average number of wage earners employed but also in the number of establishments.

Set-up paper boxes are by far the most important product of the industry, accounting for over 40 per cent. of the value of output. Cartons and folding boxes held up better through the depression than any other line, being the only one to show in 1921 an increase in both number of wage-earners and number of establishments over 1919 and likewise in value of product. In the census report of 1921 cartons and folding boxes ranked next in value of output to set-up paper boxes, but by 1923 corrugated and fibre shipping containers had recovered their former position in second place, and in that year represented in value about 30 per cent of the output of the industry.—*Commerce Monthly*.

Printing & Kindred Trades Federation.

The Bristol Conference.

The annual meetings of the Printing and Kindred Trades Federation were held at the Grand Hotel, Bristol, on Wednesday and Thursday, the 13th and 14th inst., the president (the Rt. Hon. C. W. Bowerman, M.P.), occupying the chair. Those attending the conference included: Mr. F. O. Roberts, Mr. T. E. Naylor, M.P., Mr. G. A. Isaacs, Mr. H. Skinner, Mr. T. G. Newland, J.P., Mr. G. Harraway, Mr. W. C. Warren, Mr. A. Large, Mr. R. Kneale, Mr. T. Sproat and Mr. A. E. Holmes.

The Lord Mayor of Bristol attended on the Wednesday and expressed very cordial appreciation of the manner in which the printing industry was able to overcome its difficulties as instanced by the dispute which had so recently been settled. He paid a tribute to the importance of the printing industry and spoke of the dependence of all other activities upon the printed word. He hoped they would have a pleasant and useful conference.

The business of the conference was less extensive than for many years past. This was possibly owing to the fact that the trade as a whole is in a fairly quiet state and that there is no particular point of friction. The report of the past year's work was adopted with very little alteration and not much discussion. That which did take place was more of a congratulatory nature than anything else. The fact that the executive committee had been able to accomplish the opening of such offices as the *Edinburgh Evening News* and the *Newcastle Chronicle* to the trade union influence was well received.

The work of the Joint Industrial Council was also passed under review.

In this connection it is gratifying to state that the recognition of the services of the chairman of the Council (Mr. G. A. Isaacs) and the joint labour secretary (Mr. A. E. Holmes) were made by Mr. T. G. Newland on behalf of the National Union of Printing, Bookbinding and Paper Workers, who presented to each of these officers a very handsome and appropriately inscribed cigar case.

It will be within the knowledge of the members of the unions affiliated to the Federation that during the past year it had been proposed to include a new rule which was to govern the action of affiliated societies upon questions of general interest concerning the relations of the different unions. A ballot of the whole trade was taken upon this question. The report of this ballot indicated that the interest taken in the question was not sufficiently acute to induce a very large proportion to record their votes, and in consequence it was determined at the administrative council conference that the rule be not placed upon the statutes of the Federation.

On the question of the 44-hour week the Conference reaffirmed its decision of last year to leave the matter in the hands of the executive.

The executive commiteee for the ensuing year were chosen as follows: Messrs. F. S. Crampin, J. D. French, R. Kneale, T. E. Naylor, M.P., T. G. Newland, J.P., Mrs. A. Bridge, Messrs. H. M Richardson, T. Sproat, W. C. Warren and H. Wilson Howes.

The general secretary is Mr. A. E. Holmes, whose post is a permanent one.

On Thursday night the local Bristol Printing and Kindred Trades Federation entertained the delegates to dinner at St. Stephen's Restaurant. The chair was occupied by Mr. Tom Jay, who besides being president of the local Federation is a contributor to the columns of *Punch* and other journals of a similar character. A very enjoyable evening was spent.

GERMAN REPARATIONS LEVY.—By an Order in Council Sections 1, 2 and 5 of the German Reparation (Recovery) Act, 1921, were suspended on and after Good Friday. Accordingly, the 26 per cent. levy will not be payable by British importers on goods entered after midnight April 9th.

H.M. AMBASSADOR at Paris reports that a Bill has been introduced into the French Chamber of Deputies to increase from 2 to 5 the "coefficient of increase" applicable to the Customs duty on lithopone. The effect of this measure would be to raise the "minimum" tariff duty on this product from 20 to 50 frs. per 100 kilogs.

Trade Notes.

PRINTERS' MANAGER'S DISMISSAL. — Before Mr. Justice Sankey and a special jury in the King's Bench Division, the hearing was concluded on Monday of an action for wrongful dismissal brought by Mr. H. J. Forder, printers' manager (a member of the Printers' Managers and Overseers' Association) against Messrs. Harrison, Jehring and Co., Ltd., London. The jury found for the plaintiff and awarded £800 damages, judgment being given accordingly.

CONTEMPT OF COURT.—In the King's Bench Division, on Monday, before the Lord Chief Justice, Mr. Justice Salter, and Mr. Justice Greer, Mr. M. R. Harley, the editor of the *Harrow News* and the *Wealdstone News*, was fined £50 for contempt of Court in publishing the fact that a named sum had been paid into Court under Lord Campbell's Act by the defendants in a pending libel action in which Mr. Harley is the plaintiff. The printer and publisher of the newspaper were ordered to pay costs.

THE death is announced at Manchester of Mr. Arthur Hope (76), who for 40 years was representative of Messrs. E. S. and A. Robinson, of Bristol.

MR. JONATHAN HOWE (77), of Saltwell View, Gateshead, printer, of Messrs. Howe Brothers, Gateshead, left £27,449 (net personalty £23,349).

THE late Mr. George Allan (87), of Ashfield, Frizinghall, Bradford, retired printer, for 50 years connected with the *Yorkshire Observer*, left £5,095 (net personalty £4,049).

THE late Mr. John Gorrie, Leicester, printer and stationer, left £5,993.

THE late Mr. Robert John Wood, Kelfield-gardens, North Kensington, law stationer, left £5,662.

AN exhibition of Russian posters and books opened at Leplay House, 65, Belgrave-road, S.W., on Tuesday, and continues until May 27th.

A REMARKABLE exhibition of trade cards of the eighteenth century is on show at the First Edition Club, Little Russell-street, W.C.

SHEFFIELD INDUSTRIAL COUNCIL.—The annual meeting of the Sheffield branch of the Joint Industrial Council for the Printing and Allied Trades was held at the Foresters' Hall, Sheffield, on Thursday. Mr. G. K. Marshall, in his secretarial report, stated that an endeavour was being made to solve the problem of unemployment in the women's section of the printing trade. Mr. E. T. Northend said that the national body was tackling the apprentice question. If they put forward a scheme he believed the Sheffield Education Committee would give their support. Mr. H. G. Marsden was elected president, Mr. J. N. Hobson vice-president, Mr. J. Gillan treasurer, Mr. E. T. Northend auditor, and Messrs. J. Swain and G. K. Marshall joint secretaries.

LITHOGRAPHIC STONE IN GREECE.—A Greek mining engineer established in Corfu has forwarded particulars of certain lithographic stone quarries of recent discovery. These particulars can be consulted in the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, by British firms interested with a view either to purchasing supplies of the stone or of investing capital in the company now formed to exploit the quarries in question.

MESSRS. FRANK F. PERSKHE, LTD., of Norfolk House, Norfolk street, Strand, London, W.C.2, have adopted a neat and effective method of inviting Printing Exhibition visitors to inspect the machinery on view at their show-rooms at the above address. They are distributing a well printed monthly tear-off calendar—May, 1925-January, 1926—each sheet of which bears an illustration of one of the labour-saving machines in which Messrs. Perskhe specialise, whilst particulars of each machine are to be found on the back of the sheet which illustrates it. The cover bears the intimation that as Messrs Perskhe are unable to show anything like a full range of their machinery at the Exhibition they are having a special show at their London show-rooms to which they invite all their customers, "past, present and future."

FROM Monday last week till Wednesday of this week 25 cases were attended to at the Exhibition by the Printers' Medical Aid and Sanatoria Association. In one case a patient was sent to hospital with a deep cut which touched an artery, and which necessitated stitching.

THE total weight of the machinery being exhibited at the Agricultural Hall by Linotype and Machinery Limited is said to be round about 180 tons.

WE are informed that as a result of their very interesting exhibit at the Printing Exhibition the Typary and Typon Co., Ltd., have already sold several of the Typary text typing machines.

UP till Wednesday midday the Lloyd Memorial Home disposed of about 3,000 1s. "lucky dips" from their stand in the Gallery.

THE King and Queen paid a visit of some duration to the exhibit of Raphael Tuck and Sons at the Palace of Industry, Wembley, on May 14th, on the occasion of their visit to the British Empire Exhibition. Their Majesties were received by Sir Adolph Tuck, Mr. Gustave Tuck and Mr. Desmond Tuck, three of the directors of the company, and made a minute inspection of the various art publications of the company housed in their handsome "Temple of Art," which is so prominent a feature of the Exhibition.

Trade Union Matters.

T.A. APPROVED SOCIETY VALUATION.—The results of the recent quinquennial valuation of the Approved Society of the Typographical Association under the National Health Insurance Acts, shows a disposable surplus of £50,491, and the Government Valuer recommends that a scheme for additional benefits should be based on an estimated distribution of £34,709, leaving £15,782 to be carried forward to the next valuation. The Board of Management has considered the Valuation Balance Sheet and Report, and has requested the Ministry of Health provisionally to sanction a scheme of additional benefits.

WITH further reference to the question of typography at the Harris Institute, Preston, the branch secretary has reported to the Executive Council of the Typographical Association that he has been approached by the local Master Printers' Association with a suggestion that a joint deputation from the employers and the Typographical Association should approach the Institute with a proposal that the typography classes be re started, and that the theoretical class be open to all students and the practical class be confined to printers and printers' apprentices only. The Executive Council of the Typographical Association have given approval to the suggestion.

MR. T. E. HILL (father) and Mr. F. J. Freeman (clerk), on behalf of the National News Guild, have addressed to the Newspaper Society and to the Federation of Master Printers a protest against the recent ballot of the Typographical Association, by which approval was given to the agreement under which newspaper workers are given a half-day off per week or a day off per fortnight on condition that the time so given is made up on other working days.

French Paper Industry.

The political disturbances of recent times have had an unfavourable effect on the paper trade in general and on millboard in particular. Ordinary boards are the chief sufferers and production has to be greatly curtailed owing to exceptionally bad sales. The board mills at a distance from Paris are greatly affected by the last rise in transport tariffs. Enormous quantities of waste paper, essential for manufacture of ordinary boards, are collected in Paris, where at least 60 per cent. of the boards made in France are consumed. Thus the manufacturer is usually obliged to go to Paris to buy raw materials and send the manufactured article to this city, so that it is impossible to compete with mills in the Paris district.

Raw materials are falling in price, especially rags and waste paper, for which sales are bad. Rag dealers complain of the low prices offered by manufacturers.

Chemical and mechanical pulps, which manufacturers hoped to see rise, are stationary and even tend to fall.

Printing, Bookbinding and Kindred Trades Overseers' Association.

Official Visit to the Exhibition.

The official visit of this Association as the guests of the Exhibition authorities took place on Saturday. Soon after noon the visitors commenced to arrive, and after a few friendly hand-shakes quickly dispersed wherever the inclination gave them bent, to make a close observation of the various exhibits. The bookbinding section of the industry being the one principally covered by the rank and file of the Association, it was not long before the visitors were discussing knotty problems and production difficulties with the representatives of the many firms showing bookbinding and allied machinery. In spite of the great heat and the fatigue engendered in the desire to see as much as possible of the exhibits, a pretty thorough examination was made of the many interesting things contained in the Exhibition.

Soon after four o'clock the party met for a well-earned tea in one of the large halls in the gallery, being received by Mr. F. W. Bridges, who was accompanied by Mr. A. E. Goodwin (secretary of the Federation of Master Printers). Those present included: Messrs. J. Fleming (president), A. G. Aves (vice-president), A. Cox (secretary), Tom Hunt, Chris Atkins, B. J. Sansom, F. C. Peacock, T. Goodall, W. T. Lingham, T. Hill, A. S. Long, A. F. Walters, A. W. Sandilands, J. Dixon, and H. Richards.

Mr. Bridges, on behalf of the committee and the management, welcomed the members of the Association as friends and fellow-workers in the printing trade. He said their Association had the privilege of being the first of the organisations connected with the industry to pay a visit to the 1925 Exhibition. He hoped they would have a good time and would go away feeling benefited by the visit. Some of them would probably be coming again during the course of the Exhibition, and if they did he was sure they would see something fresh and of interest. He was pleased to offer them welcome because he attached special importance to the overseers' associations, and also because he felt that overseers occupied such responsible positions in the conduct of their businesses. He was glad many of them had brought their ladies with them because they would get some idea of the machinery handled by their husbands.

Mr. J. Fleming, on behalf of the Association, expressed thanks for the hearty welcome they had received, and congratulated Mr. Bridges and the management on the result of their efforts and work in getting together such a splendid exhibition of printing and allied machinery. As overseers they knew the importance of up to-date machinery. Even if it came from Timbuctoo they must have it. Such exhibitions as the present gave them the opportunity of studying and seeing for themselves what was suitable for their own particular requirements. From his own observations he was glad to think that the old country was still able to hold up its head, and was capable not only of supplying the needs of the home market but the Colonies as well. In concluding he hoped that that Exhibition would prove to be to all concerned the most beneficial ever organised by Mr. Bridges.

Before the company dispersed for further sight seeing Mr. Fleming spoke of the delight felt at the presence at the gathering of Messrs. A. J. Gorbold and A. Germaney (provincial members).

A scheme for the standardisation of grocers' bag sizes and the simplification of the vast variety of kinds has been put into final form by the Grocery Bag Manufacturers of the United States.

According to a correspondent of the *Manchester Guardian Commercial*, paper and stationery are among the classes of goods which suggest increased British business in Cuba.

The Howard Smith Paper Co., Ltd., have issued two folders containing samples of high distinction. The series of watermarked papers, laid and wove, are of very high quality and are worthily entitled "A Canadian Achievement." Specimens of the Royal Record bond papers—a pure rag, loft-dried product—in various tints are contained in the second folder. Styles of letter headings illustrate the suitability of these papers for these purposes and for various methods of printing.

Our Miniature Edition.

A Unique Feature.

Considerable interest is being aroused by the miniature edition of the *British and Colonial Printer and Stationer* which is being distributed at our Stand, Nos. 51 and 52, in the Gallery, at the Printing Exhibition, Agricultural Hall. It is a novelty which appeals to all who appreciate something ingenious in printing craft, and makes one desirous of information as to the method of production. Below we give an outline of the "Novographic Process," by which means this Lilliputian facsimile edition of our April 16th issue was printed, and this, we understand, illustrates only one of the many purposes to which this process can be applied. It is remarkable how clear and readable the entire production is, it being possible to read from cover to cover without optical aid, although for the smallest lettering a magnifying glass is advisable, under which the matter stands out clear and well defined. A process which is capable of producing such work will be of interest to all who are connected with printing in any form. Within the last few years there have been many new methods of printing introduced, all of which claim various advantages, and to review the merits or otherwise of all would run into several volumes; in almost every instance the deciding factor is the question of cost, and many of the processes now available can only be applied where cost is a secondary consideration. To be of commercial value a new process must show a saving in cost, and at the same time give something which is better than existing methods, and this is the claim made by Messrs. Lowe and Brydone (Printers), Ltd., for their Novographic process.

An Interesting Process.

From particulars obtained from the printers we are able to state that all catalogues with or without illustrations can be reproduced from existing printed copy, or produced from bromide prints, in either case without the necessity and expense of making half-tone blocks. Type matter of every description can be reproduced, and in the case of books where stereos are either non-existent or worn out, considerable expense is obviated by the Novographic process. It is therefore possible to print works which would otherwise still remain out of print owing to the expense of resetting. Here we may mention that the scope for corrections which the process allows is a great asset, especially with regard to catalogue work where prices are out-of-date, and also in book work where extensive revisions can be made. Once a book, catalogue, list or anything else is printed by the Novographic process the number of copies obtainable is practically inexhaustible, the number of reprints limitless, and the last copy printed retains the same quality as the first impressions. Half-tone illustrations by the Novographic process have a distinctive quality, and artistic results are obtained on papers which are out of the question from a letterpress point of view. To explain the process briefly, the first procedure is to specially treat the original photographically, and extensive studios are available at Messrs. Lowe and Brydone's factories for this purpose; the next process is to make a metal print, which process also has special features of its own. An efficient plant of the offset machinery next deals with the resulting plate and rapidly runs off the edition. Colour work is another field successfully covered by this process, and some very pleasing examples are available for inspection. It appears, therefore, that the Novographic process is one of the most promising printing methods of the present day.

It is reported that two firms are preparing to tender for the assets of the Whalen Pulp and Paper Co., which are to be sold by order of the British Columbia Courts on May 29th. It is understood that both concerns will be prepared to invest nearly $7,000,000 in the building of power houses and a paper mill to utilise the product from the pulp plants.

The new greaseproof papermaking machine, which is to be erected at the Säffle Mill, Sweden, belonging to Billeruds Aktiebolag, said to be the largest of its kind, will have a daily capacity of 28 tons of 40 gramme paper, raising the total production of greaseproof paper by the Billerud Co. to a maximum of 55 tons a day, which represents 75 per cent. of the total Swedish production.

Newnes & Pearson Printing Co., Ltd.

Staff and Workpeople Entertained at the Exhibition.

The staff and workpeople—to the number of about 560—were entertained to high tea on Saturday in the Berner's Hall, Agricultural Hall, by the directors of the Newnes and Pearson Printing Co., Ltd. The chair was occupied by Sir Frank Newnes, Bt., and there were also present: Mr. J. M. Bathgate (managing director), Mr. W. Grierson, Mr. E. Bauser, Mr. A. Biffen (assistant manager), Mr. A. Cox, Mr. F. Honor, Mr. W. Kenney and Mr. H. G. Milton.

Sir Frank Newnes, in proposing a hearty welcome to the employees, hoped that the visit to the Exhibition would enable them to become even better acquainted with the latest developments in the great printing industry. He was sure the more they knew of the up-to-date methods employed in production, the more likely was it that improved conditions in the printing industry would eventuate. Referring to the beautiful weather conditions then prevailing on that Saturday afternoon, to the popularity of the firm's own sports' club, and to their devotion to lawn tennis, cricket and other forms of sport, Sir Frank said he was more that agreeably surprised to see such a large gathering present.

Mr. Plank (father of the federated house chapel), who replied on behalf of the employees, thanked the directors of the company for their generous invitation.

The excellent arrangements were carried out by the following stewards: Messrs. A. Biffen, W. Morris, W. Woods and Robson.

Stationers' Social Society.

Annual Golf Competition at Hadley Wood.

Members of the Stationers' Social Society who attended the annual golf competition at Hadley Wood on May 12th were fortunate in being favoured with the first real summer day this year. The weather was perfect, and the delightful surroundings, together with an excellent golf course which was in fine condition, enabled the visitors to spend a most enjoyable day. Mr. C. Newell, C.C., the president, honoured the occasion with his presence, others attending including Mr. J. T. Steele, Mr. G. E. Oswick and Mr. R. J. B. Smith. In addition there were the players in the competition, who made up a very satisfactory number. Most of the visitors went down by car, and the drive out and home again was not the least attractive part of the day's relaxation.

Play in the competition for the Horsburgh Cup was of a high order, and so close was the finish that four members tied for first place with the following scores:—W. Goodall, 85—8=77; R. Scott Prideaux, 90—13=77; C. H. Sanguinetti, 95—18=77; W. Sommerville, 91—14=77.

The tie was played off in the afternoon, when Mr. Scott Prideaux succeeded in winning the cup for the third time in succession, with a score of 90—13=77, Mr. Sanguinetti being the runner up with 99—18=81.

Foursome matches were indulged in during the afternoon and they contributed to complete the success of the meeting. Thanks are due to Mr. G. E. Oswick for so ably looking after the arrangements in the absence of Mr. J. W. S. Johnston.

At the conclusion of tea, Mr. Newell presented the cup to Mr. Scott Prideaux, and congratulated him on repeating his success of the previous two years. It was a performance of which the winner had every reason to be proud.

Mr. Prideaux suitably responded, and Mr. Sanguinetti also returned thanks for his share of the "sweep" as runner up.

Mr. A. E. Mist, the hon. general secretary of the Society, asked Mr. Lionel Savory, who is a prominent member of the Hadley Wood Golf Club, to convey the thanks of the Society to the committee for their courtesy in granting the use of their splendid course.

Mr. Lionel Savory acknowledged the expression of thanks on behalf of the Hadley Wood Club, and said he was sure a repetition of the visit would be welcomed.

The Stationers' Social Society bowls competition for the Woollacott Cup will be held at Malden on Tuesday, June 9th.

A New Binding Machine.

We were recently privileged to witness a demonstration of a newly-invented machine which, we feel sure, will be of very great interest to printers and bookbinders. Hitherto, it has been a handicap to the general printer and bookbinder that there is no machine on the market to affix covers to all classes of printed matter, which would be profitable to instal for short runs, and a variety of sizes and thicknesses. It is hoped that the machine in question will supply this long overdue want. The inventor is a gentleman who occupies a responsible position in a well-known London printer's, and who has had a life-long experience of all classes of binding.

In this machine, the books, either sewn or wire stabbed, are automatically fed into a conveyor carriage and taken over a roller revolving in hot glue, whereby the back edge of the book is glued, provision being made to ensure that before this is done, sewn books are accurately knocked up all round.

They are then taken into position to the middle of the machine. Another conveyor carriage moves from the opposite end, and grips the side of the book, along the back edge, below the first conveyor carriage. Whilst in this position, the top copy of a pile of covers, lying on an intermittently upward moving table, is brought in contact with the glued edge, causing it to adhere, provision being made for the table to rise automatically as the pile of covers decreases. The book, with cover attached, is then carried forward by the conveyor carriage (the other one going back for the next copy), taken through a backing and creasing roller, and dropped into an automatic presser, whence they are delivered into a hopper.

The Fleet Combination Coverer and Limp Binder.

A most valuable feature of this machine is an ingenious device which may be added, by which covers can be delivered singly in the correct position on the cover table, glued all over, so as to enable books to be bound "wrapper lined" or "limp flush" style, the covers fastening down on to the front and back endpapers. So far as we are aware, there is no other machine in existence claiming to do this particular style of binding. It is claimed that this operation can be done by the machine at about one-fourth of the present cost of hard labour, either paper or cloth being handled. Furthermore, by another addition, the machine will "first line" or "mull" all classes of flat back books. A supplementary feeder has been devised which enables books to be taken from the wire stitching machine as they are stitched, and fed into the covering machine without intermediate handling.

The machine will handle any size from 4¼ ins. by 2¼ ins. up to 13½ ins. by 8½ ins., and in thickness from ⅛ in. to 2 ins. A very important feature is the speed and simplicity of adjustment. Alteration from one size to another can be effected in under ten minutes; and to alter from one style of binding—covering to "limp flush," or *vice versa*—takes about twenty minutes. A production of from 1,000 to 1,250 copies per hour could be reckoned on.

The machine was unfortunately completed too late to be shown in the present Exhibition. Patents have been taken out on the Continent, in U.S.A., and Canada, and further patents are pending. It has not yet been placed on the market, but it is expected that arrangements will shortly be made for this to be done. In the meantime, any enquiries may be addressed to Fleet Patents Ltd, 10, Marmora-road, Honor Oak, London, S.E.22.

Automatic Flat Plate Casting Machine.

Novel "Winkler" Apparatus.

Claiming to be the first automatic flat plate casting machine, the "Winkler" No. V is sure to arouse great interest in the printing trade.

The "Winkler" No. V embodies most of the patented features of the "Winkler" curved plate casting machine. The casting box is directly connected with the melting pot, so that the stereo plate is cast without a tail, but under the head of the whole contents of the metal pot—by gravity, that is to say—at a pressure most suitable for obtaining a perfectly true and solid plate.

The machine embodies a melting furnace which can be arranged for heating by electricity, gas, oil, coal or coke. It has a flat, vertical rear side, and can, therefore, be conveniently placed against the wall. The firebrick lining to the combustion chamber is very well backed up with insulating material, so that heat losses through radiation to the atmosphere are minimised.

The melting pot is wedge-shaped, and has at its lowest portion an outlet slit (mouthpiece), through which the metal enters by gravity into the casting box when the valve is open. The hood covering the melting pot keeps the surface of the molten metal in a non-oxidizing atmosphere, which reduces the formation of dross to a minimum.

The valve is a device for alternately opening and closing the mouthpiece in the metal pot. It is a tapered plug extending over the whole width of the pot, and provided with twin bevels of a width approximately corresponding to the width of the largest size plate that can be cast. During the casting operation the metal in the pot and in the casting box therefore forms one single liquid mass, so that the "feeding" during solidification is maintained from the full pot, under the comparatively high pressure of the head of metal, thus ensuring perfectly solid plates. The valve cannot open unless the box is fully closed and tight up to the mouthpiece of the metal pot, so that there is no risk of splashing of hot metal. After allowing a few seconds for the metal to solidify, the valve automatically closes again, and, whilst turning, severs the freshly cast plate from the supply of metal, the opposite edges of the bevel in the valve plug and of the mouthpiece being shaped as cutters. An automatically actuated oil pump adequately lubricates the bearing surfaces of the valve, giving a fine film of oil without excess.

The casting box is moved back to its original open position as soon as the mouthpiece is closed and the plate is now separated both from the matrix and the platen, but held in such a way that it can be conveniently taken off. The box is balanced, so that it can be operated by hand with little exertion. The platen is provided with electric heating in order to maintain it at an even temperature, a feature which has been found very advantageous when doing register colour work. The bed is efficiently water jacketed and insulated.

The matrix clamping device is a patented feature, which eliminates the necessity of (1) setting the matrix afresh for every plate cast, (2) pasting a tail paper to the top end of the matrix, and (3) casting the plate with a "tail." When the matrix is once set and clamped at one end it is not released until all the plates required off it are cast. Setting the matrix once only for any number of casts affords a very considerable saving of time and labour, as the most skilled operator requires at least 30 seconds to do this under the ordinary method. The matrix is in full view of the operator before and after each casting.

The gauges are fixed to the top end of the lid and interchangeable, so that it is possible to cast plates of any size up to a maximum of 16½ by 22⅜ ins. The dead accuracy of these gauges enables the plates to be cast with either square or bevelled edges, which require no trimming or finishing except at the top end.

The driving gear of the "Winkler" No. V is fully enclosed and occupies very little space. It comprises the flywheel with friction clutch and the driving shaft actuating the worm wheel, which moves a crank for opening and closing the valve. This gear is driven by a direct connected 2 h.-p. motor.

No special training is needed to work this one-man machine, simplicity, reliability, and safety of operation, having been keynotes in designing the "Winkler." The setting of the matrix takes only a few seconds and about three plates per minute can be cast. If a number of plates are required from the same matrix, the production speed of the machine is still more in advance of any competitive casting method, as the matrix need be set once only.

Automatic Metal Mixing.

When the metal flows into the casting box the air is displaced and escapes through the metal in the pot, thereby acting as a natural agitator.

By the direct connection of the box with the melting pot all atmospheric influence on the metal is eliminated during the casting process. This feature, combined with the advantages of the instantaneous filling of the box, renders it possible to cast the plates at a lower temperature than with any other system.

As already stated, the melting pot can be heated by electricity, gas, oil, coal, or coke, Most "Winkler" casting machines are electrically heated, many with a separate gas heating equipment, which can be used either independently or conjointly with electricity.

In the statement of affairs prepared for the first meeting of the creditors of George Weightman (35), paper merchant and paper-bag manufacturer, residing and trading at 60, Glentworth-road, Radford, at the office of the official receiver in Nottingham, liabilities of £421 7s. 3d. were shown, with estimated assets of £79 9s. 10d., leaving a deficiency of £341 17s. 5d. Debtor attributed his failure to keen competition, shortage of capital, and insufficient profits to meet expenses.

The *British and Colonial Printer and Stationer* circulates all over the world.

Digitized by Google

The British Empire Exhibition.

Printing and Allied Trades at Wembley.

The British Empire Exhibition, 1925, was opened by the King on May 9 with very moving ceremony. Since last year very considerable alterations have been effected, the chief of which is to be seen in what was the Palace of Engineering, which is now devoted to housing and transport.

Less change is to be seen in the Palace of Industry, owing to several familiar objects and stands still being *in situ*. The section devoted to printing, paper, stationery and maps is, however, of considerably less importance than it was last year. There is, of course, no papermaking machine, and the site formerly occupied by this exhibit is now a quick-lunch cafe. Nor are there any individual papermakers exhibiting, while for the most part those who are described as wholesale stationers are concerned mainly with the sale of fountain pens and pencils.

On the printing side, we have again Messrs. Waterlow and Sons, Ltd., with a stand similar to that they occupied last year. In addition to specimens of bank notes, postage stamps, colour printing, lithography and high-class binding, they have a working exhibit of a railway ticket printing and counting machine. The public continue to take a great interest in practical exhibits of this kind, especially when they see an actual contract going through for the Metropolitan Railway Co. Messrs. Waterlow have a long association with exhibitions, and a little machine at Wembley shows that they were exhibiting at the Great Exhibition of 1862.

Other printers who are represented by specimens of their work are the Sussex Art Co. and Solomon and Whitehead, Ltd., of Birmingham, colour printing specialists.

Maps form an important item in this section and there are large and interesting displays by Messrs. George Philip and Son, Ltd., and the Ordnance Survey Office, Southampton.

Messrs. Raphael Tuck occupy the same central position in one of the main avenues as last year, their stand being a familiar landmark. The contents are also similar to those of last year, revealing as they do very fine art work, particularly in relation to post cards.

Paper boxes are, of course, a large item in the general routine of the Exhibition, and i a section of the Palace of Industry devoted to the Nobel Industries Ltd. there is a little exhibit by Paper Goods Manufacturing Co., Ltd., whose principal products are cardboard boxes, cartons and the like.

Printing, bookbinding and illustration are also represented in the Palace of Arts, where there are a series of commercial and colour prints.

Canadian Paper and Pulp.

The Canadian Pavilion does not show such a comprehensive exhibit of the pulp and paper industry as it did last year, since the Pulp and Paper Association is taking no official part in the exhibit of the Dominion. Nevertheless Canada is proud of its rapidly-expanding pulp and paper industry, and in the forestry section a model working pulp and paper mill, in which the logs are seen floating down the river, and the biggest news-sheet in the world, 18 ft. 3 ins., are on view, as a reminder that Canadian news-print mills have a capacity of 4,400 tons output daily, the combined production representing a daily cut of 6,000 acres of forest land.

Apart from this general exhibit, there are one or two individual stands associated with the pulp and paper industry. The Wayagamack Pulp and Paper Co., Ltd, Three Rivers, Quebec, make a display of kraft in rolls and coils, together with textilose bags and the wood logs from which the original pulp is obtained.

Another association with the pulp and paper industry is the exhibit of Porritts and Spencer (Canada), Ltd., who display samples of papermaking felts of considerable variety. These include specimens of super wet felt, superfine press felt and second press news felt. Other felts refer to ground wood pulp and clothing for wet and dry machines.

Newfoundland.

Two outstanding papermaking exhibits are to be found in the Newfoundland Pavilion.

The Anglo-Newfoundland Development Co. have on view an excellent model of pulp mills, which is the centre of a stand built on a foundation of pulp, with reels of news-print as supporting pillars. From the picture illustrating the cutting of timber one can trace the course of the wood until it comes out of the mill as sulphite or mechanical pulp. In addition to pictures of the company's mammoth papermaking machines, there is a model of the paper-carrying steamer, "Geraldine Mary."

The second exhibit has been prepared by the Newfoundland Power and Paper Co., Ltd. It consists of two large relief maps showing the vast sources of power and raw material. The excellent layout of the mills is clearly indicated. One can see the logs floating down the stream, to enter the plant on the first stage of the process. The material then goes through the grinding-room and on to the papermaking machines, finally coming out as finished paper into the sheds which abut on to the wharf, two stores being provided, one of them a winter store to cover the period when immediate shipment is impossible. The steamer alongside indicates the wonderful facilities that are here provided for the transport of paper. The capacity of the mill is 400 tons of news-print daily.

Publishing.

Newspaper and publishing stands are less numerous. The *Daily Telegraph* kiosk occupies the same position and serves the same purpose as before. *The Times* pavilion is again occupied. The Fleetway Press, Ltd., continue to handle the catalogue and other publications for the Exhibition authorities, having various kiosks about the grounds and buildings. Benn Bros., Ltd. (Ernest Benn, Ltd.) are exhibiting this year, and the *Daily Sketch* and *Sunday Herald*, Ltd., are in evidence. In the British Government Pavilion, the Stationery Office have a representative collection of official publications.

For the rest there is every prospect of a big consumption of paper and print at Wembley. Already the waste paper baskets are being well filled with paper bags and cartons which have contained food or refreshment. Given fine weather, further large crowds will visit the Exhibition this year, and the collection of exhibition literature and the consumption of paper should go on apace.

CAPACITY

THE profit earning value of a composing machine depends upon its capacity.

The Intertype operator can have twelve faces at his disposal without leaving his chair.

When it is necessary to change a magazine it can be removed and another one substituted in less than ten seconds.

These are some of the advantages which make the Intertype the most profitable machine of its class, and account for its outstanding success.

We can easily show you how the Intertype can increase YOUR profits.

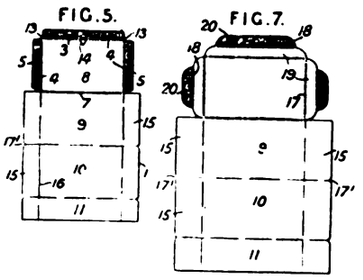
New Inventions

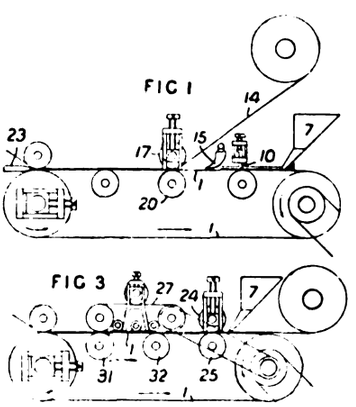
Platen Sheet Delivery.

In a sheet feeding, carrying, and delivery mechanism for platen machines of the kind which takes a sheet from a table situated below the platen and conveys it upward for printing and delivery, the gripper bar 4 and pivoted gripper 5 are carried by elbow levers 37, pivoted at 38 to blocks 6 reciprocating along rods 7 pivoted at 8 to the machine frame. Each elbow lever 37 carries a roller 26, which strikes a fixed abutment 27 when the gripper is approaching its lowermost position, whereby the levers are swung against the action of a spring 28 into position to enable the gripper to take a sheet 1 from the table 2. The pivoted gripper 5 is opened at the same time against the action of its spring 32 by



the engagement of a stud 35 on arm 39 projecting from the pivoted gripper 5 with a guiding surface 31, which is carried by a lever actuated simultaneously with the front stops 29, so that when the latter are lowered the pivoted gripper 5 closes and grips the sheet. As the blocks 6 are moved upwards along the rods 7 to carry the sheet to printing position, the rods 7 are swung towards the type bed by members 9 on the platen. The blocks 6 are reciprocated by a connecting rod 25 and crank 24 on a wheel 23, actuated by a rack 22 adjustably connected to a slotted arm of a two-armed lever 20 pivoted on the end of one arm 15 of another two-armed lever, the other arm of which has a roller 16 engaging a cam 13. The other arm of the lever 20 is connected by a link 21 to a lever 17 carrying a roller 18 held in engagement with another cam 14 by a spring 19. Printing takes place when the parts are in position shown by full lines in Fig. 4, the combined action of the two cams 13, 14 on the lever 20 being such that the grippers 4, 5 are then at rest. The position of this dwell may be varied according to the size of the sheet by adjusting the bolt 36 on the end of the rack 22 in the slot in the lever 20. After printing, the upward movement of the grippers 4, 5 is continued whilst the parts are moved into the position shown in dotted lines in Fig. 4, the pivoted gripper 5 being finally swung open by the engagement of the arm 39 with the hook 33, whereby the sheet is released, transferred to hooks 10 on the platen, and carried thereby to the delivery rollers 11 and delivery box 12. The invention is in the name of Mr. E. Scheding.

Combined Letter Sheets and Envelopes.



Mr. G. Handley has patented an invention in combined envelopes and letter-sheets of the kind formed from a single blank provided with perforated marginal portions coated with adhesive along one end and a part of each side edge, a row of perforations is provided mid-way between, or adjacent to, the ends of the side perforations and adhesive marginal side edges. Fig. 5 shows a letter-sheet 1 with gummed marginal portions 3, 5 and perforations 4, and a transverse row of perforations 7 adjacent to the lower ends of the marginal portions 5. The parts 9-11 of the sheet may be provided with side extensions 15 which can be folded inwardly along lines 16 previously to folding the parts 10, 11 upon the part 9. Cut-out portions 17¹ indicate where the sheet is to be folded. The marginal portions may be cut away at 13 to facilitate folding and sealing, and a substantially V-shaped aperture 14 may be provided to facilitate opening. In a modification, Fig. 7, the marginal portions are of increased width and divided into strips 19, 20 by two

rows 17, 18 of perforations or the like. The inner strip 19 is non-adhesive to permit the insertion of a paper knife beneath to open the envelope.

Coating Webs.

In a device patented by L. Schwabe coating substance is delivered by a funnel 7 upon an endless band 1, the layer being made uniform by a scraper 10. Cold air may be blown by a nozzle 15. The laden band and the web 14 are then pressed together by rollers 17, 20. The coated fabric is separated from the band by a cutter 23. In modified apparatus, Fig. 3, the funnel 7 delivers upon the web which then passes between rolls 24, 25 and then between an endless band 27 and the band 1 and rollers 31, 32.

MESSRS. DAVIES AND ROYLE, LTD., submit samples of two very fine grades of paper specialties—Greaker greaseproof and Ranheim unglazed and M.G. krafts and pure sulphate krafts. Particular study has been given to the perfection of these products. Accordingly it is claimed that the greaseproof turned out by the well-known undertaking, Greaker Cellulosefabrik, Norway, is the whitest unbleached greaseproof on the market, this being the result of years of careful experiment and improvement. It is a very clean and beautiful sheet.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

Already the Printers' Exhibition is in full swing and another type of effort is made to provoke that elusive trade revival. Exhibitions are merely elaborate shopping centres and advertising stunts of an extremely efficient sort. In this case, the very great majority of printers, paper users, paper buyers and advertising agents will go down to the Agricultural Hall to make renewed or new acquaintance with the things that produce and constitute printing. So many hours will be devoted solely to inspection and assimilation of these things, a unique circumstance when it is recognised that only about once in several years is there such a simultaneous concentration on the study of trading materials.

* * *

IT is a pity that papermakers and merchants are so inadequately represented at a show of this kind. As far as we can see, there are only about eight stands connected with the paper side of the allied trades. If only for the opportunity of meeting their country friends and chatting business, it would have seemed worth while for London houses at least to have taken space. Quite recognising that very little paper buying is ever transacted at an exhibition, the advertisement value remains to be considered. We would like to have seen a papermaker's stand arranged with specimens of work done on branded or watermarked papers; a sort of craft educational exhibit designed to show the general body of printers what can be done on certain papers for certain purposes.

* * *

THE Budget has been presented, discussed and criticised, and the two main features that have assumed principal importance are the income-tax concession and the tariff on artificial silk. There is nothing in particular to enthuse over, but it must be accepted that the reduced income-tax is a welcome lightening of the financial burden. The general feeling is that the present concession is the first of a series which will be granted over a period of years. From the point of view of an industrial revival, a more courageous, if more speculative, policy would have struck the imagination with greater force. It is tolerably certain that a shilling reduction on the income-tax would have set in motion wheels of commerce, trade and industry that have long lain rusty. As it is, we shall have to wait for the full consummation of our hopes, and in the meantime make the most of the concession and any increase in trade that follows in its wake.

* * *

SIR ALFRED MOND'S scheme for using the unemployment dole as a subsidy for employers and as a direct means of increasing the amount of wage-paid work is the final outcome of long-deferred hope. Year after year since the finish of the war the employers of this country have been waiting for the realisation of hopes constantly held out before them. Changes of Government have been made and each change furnished ground for new hope. Money values have become almost stabilised, Continental conditions have improved, disastrous labour stoppages have been averted, and on each and every occasion there has been the general hope of trade recovery. We have been turning the corner for ten years and have not completed the movement yet. While employers have borne an almost over-burdening weight of taxation, industry has suffered from unemployment, with all its evils of poverty and the dole. If the dole is a Government institution, it is still subscribed by employers for the unemployed. In Sir Alfred Mond's scheme, it comes back to employers to provide work and wages, to create trade-recovery and to enable industry to hold its own against the subsidised foreigner. Whether the scheme is a practicable and workable one remains to be found out by close consideration. On the face of it, there appear to be insuperable difficulties. Subsidies are very rarely quite successful and too frequently work unfairly. The view of the man in the street would be that if the Government is prepared to perpetuate unemployment by dole distribution, or if, on the other hand, it is willing to consider subsidised employment, it would be much more logical to consider reducing postal rates, income tax, rating and some of the other overhead expense items which make production costly and cause our manufacturers to start off in competition with the foreigner under an unfair handicap.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

COLOUR
Characteristics in White Paper.

It is commonly known that all so-called white papers show variation in tints. In order to find the extent of the departure from true white, 21 commercial papers, including news print, book, writing, bond and ledger, were tested by the Bureau of Standards, Washington. It was found that all

—Color curves of various papers.

the papers tested were quite deficient in blue light reflected and, to a smaller extent, in green.

For this work, a Pfund colourimeter was used. This apparatus makes use of more than three reflections from the material being tested and was found to be much more sensitive to small colour differences than the ordinary colourimeter which makes use of only one reflection.

In the illustrations herewith are shown graphically the colour characteristics of six papers tested for colour by this method. The brightness values lie along the vertical axis of the figure and the colours for which the brightness values of the papers were determined lie on the horizontal axis. Each co-ordinate on the graphs is the relative brightness of quality of light of the given colour reflected by the given sample.

It should be noted that Bond 82 is characterised by a graph which is nearly horizontal, since the brightness values for each of the three colours is nearly the same. This indicates that this paper reflects all colours of light in nearly the same ratio, having no predominate tint. In addition, its high position on the vertical scale shows that it is near a true white.

The curves characteristic of the two news prints are decidedly off the horizontal position, and show that these papers reflect much more red than blue light. These graphs are also much lower on the vertical scale than the other graphs, indicating that these samples are gray in colour rather than nearly white, since they reflect much less light of any colour than do the other papers.

Foreign Customs Duties.

A duty of 50 per cent. *ad val.* is now imposed on playing cards imported into Iraq.

The following excise duties are payable on the goods mentioned on importation into Latvia: Tissue cartridges and papiros paper, cut, folded or perforated: tissue cartridges, 40 centimes per 100; papiros paper, in sheets not exceeding 40 sq. cms in area, 12 centimes per 50 sheets. Papiros paper in sheets exceeding 40 sq. cms. in area pays an additional duty of 12 centimes for each additional 40 sq. cms. or fraction thereof.

SOCIETE DES PAPIERS KELLER-DORIAN (Lyons) has acquired a licence for the manufacture, for purposes other than electricity, of impermeable board packings and boxes. The Bakelite paper required for the process is made at their Lyons' works.

Printers' Complaints about Paper.

A PAPERMAKER REPLIES TO CRITICISMS.

Captain R. King-Smith, of the Golden Valley Paper Mills, Bitton, near Bristol, did a useful service to the papermaking industry when he addressed the members of the West of England Centre of the Printers' Managers and Overseers Association at Bristol, recently on "Papermaking." He replied to a number of the complaints which printers make regarding paper, speaking from a practical knowledge of the subject. Following are extracts from Captain King-Smith's address :—

General Principles.

The papermaker nowadays has very little to congratulate himself about, but he can at least feel that he is providing one of the essentials of every-day life, the lack of which would completely upset our modern civilisation. From the earliest times, growing brain power always necessitated means of recording and conveying thoughts, and as the medium of conveyance grew cheaper and more generally attainable, so knowledge was able to spread further afield. The first known effort to improve on the natural tablets of stone, pieces of dried skin, bleached bones, etc., was the use of papyrus, a form of aquatic plant, by the Egyptians, but the first real paper made from rags of which we know, was made by the Chinese about A.D. 152.

The knowledge appears to have spread to Europe about the eighth century but linen paper was not actually made in Europe until the fourteenth century. England began to cultivate the process about 100 years later and the first real paper machine was invented in 1799. A few years later the Fourdrinier machine was evolved and this was the real birth of the industry as far as we are concerned. The most modern machines still follow the original Fourdrinier in general principle and so far no one has been able to improve on this with a better method.

The basis of all paper is cellulose, chemical formula, $C_6H_{10}O_5$, a member of the organic group known as the carbohydrates. Cellulose occurs widely distributed through the vegetable kingdom, and is the principal component of all cell membranes and wood. It never occurs naturally in a perfectly pure form, but cotton is the most nearly pure form known. Cellulose is insoluble in water or any of the ordinary solvents, but there are three solutions made which are of importance commercially. The solvents used are concentrated sulphuric acid, zinc chloride, and an ammoniacal solution of cupric oxide, and they are used respectively for making parchment paper, electric lamp carbon filaments, and vulcanised fibre, and the last, by far the most important, for making artificial silk and also Willesden goods. In the last case the cellulose is dissolved in the cupric oxide solution and then the resultant syrup is forced through very fine nozzles into pure alcohol, which hardens it into the thread of silk.

From the above it would seem therefore as if the papermaker had the whole vegetable world to select from for his supplies, but unfortunately he is ruled by the factor which cannot be escaped and must therefore continue his activities to those fibres whose ultimate cost and suitabilities are competitive commercially.

Materials.

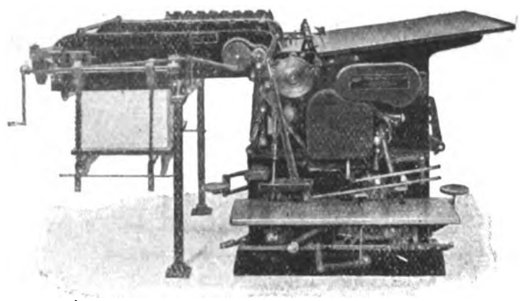
The first of these is cotton, the purest natural form of cellulose, yielding over 90 per cent. of pure fibre. A fibre that felts well owing to its formation, resembling a flattened tube with a wide channel, and showing the characteristic of collapsing and twisting on itself when dried. These properties, however, also prevent the fibres lying too close together and so help the bulk of a paper. Cotton can be bleached to a brilliant colour, and in the form of new white cuttings is suitable for the manufacture of the best papers, where hardness and purity are essentials, whereas old cotton fibres, owing to their soft and spongy nature, are the best for making absorbent papers such as blottings and filter papers. They can be used either alone or mixed with linen, chemical wood or esparto.

Linen is the aristocrat of papermaking fibres. It shows a straight, evenly rounded fibre, with narrow canal of uniform size and thick walls. It does not bleach as readily as cotton, but possesses great strength and endurance, thus particularly assisting the folding resistance of a paper. Owing to the thicker walls of the fibres, a linen paper is more opaque than one made of cotton.

Esparto is a coarse grass which grows in Spain and Africa. The fibres are narrow and cylindrical with a small canal, and a feature of this material is the small seed-hairs and cells which are very characteristic. It yields 40–50 per cent. of cellulose; but owing to the severity of the treatment necessary in boiling and bleaching to remove the organic "shievy" particles, the strength is affected and the fibre is not suitable for papers where strength is a feature. This particularly applies to the tear, an esparto sheet tearing very softly and easily. It gives a softer and more mature feel to some qualities; and as the fibres do not stretch as much as most other fibres in question, it is very suitable for litho papers. It also bulks well and is the most suitable fibre for feather-weight papers.

Chemical wood pulp is one of the chief papermaking fibres. A flat ribbon-like fibre, transparent and thin-walled. It is used largely by itself for all classes of papers and also works well in combination with cotton and linen and esparto. The necessary wood is chiefly obtained from coniferous trees such as the pine, spruce and fir; for special purposes, *e g.*, for making light bulky papers, poplar and aspen pulps are used. The pulp is prepared mainly by two processes, the sulphite and sulphate or soda process. In the former, the wood, after being barked and having had the knots removed, is heated at a high temperature with "bisulphite liquor," which is an aqueous solution of sulphur dioxide in which a sulphite of lime, magnesia or soda is dissolved. The sulphite combines with the organic incrusting materials surrounding the cellulose to form soluble compounds which can be removed by washing. In the latter method the wood is digested with a mixture of caustic soda and sodium sulphide. The sulphite process gives the best pulp for bleaching properties and also the cleanest pulps, but the soda process gives greater strength. Mechanical wood pulp, which is the chief constituent of "news," consists of wood, peeled and cut into suitable lengths and then ground against stones in hydraulic press boxes. It is full of organic matter and very harsh and being only raw wood cannot be used absolutely alone. Hemp, manilla, jute and straw are other fibres used for special purposes, and bamboo has been constantly tried, and is now used in some Indian mills, but it has not yet been made in a commercially competitive form for the European market.

Variations in the Same Making—Finish.



The complaint may be that the finish of different sheets, usually in different reams, varies, or that there is a variation between the finish of the two sides of a sheet. With regard to the first, those who are not well acquainted with a paper machine do not realise that it is by no means easy to get exactly the same finish right across the machine. When the paper is being dried on the cylinders, the water is driven off as vapour. This is coming off all over the sheet but owing to the way the cylinders are built in a double tier, it is much easier for the moisture at the edges of the paper to get away than it is for that in the middle. Consequently the paper has a tendency to be damper in the middle of the sheet, and under the same calendering pressure a damp sheet will take a higher finish than a dry one. Again though the perfect machine would run day and night without stop, in practice there are the usual shuts for washing up, small repairs and adjustments, etc. After a stop the temperature has altered and it takes some running time before it becomes constant again. During all this time the drying must be most carefully watched to see that it does not affect the finish by variation. With regard

L&M

OFFSET LITHO ROTARY

WITH PILE DELIVERY.

FEED SIDE OF THE L&M OFFSET LITHO ROTARY WITH PILE DELIVERY.

This is a two-revolution press—a very desirable feature in a machine for colour printing in dead register. The printed sheets are delivered face up on the pile clear of the machine at a convenient height for examination. The plate cylinder is of large diameter, which facilitates perfect inking, damping, and manipulation of the plate. The damping mechanism is placed below the plate cylinder, so that splashing of water does not affect any other part of the machine. The ink distribution is highly efficient. A combination mechanism automatically trips the impression cylinder, inking rollers, ink-ductor, and water-ductor rollers. The machine attendant can fully control the press without leaving his seat.

It is built with Pile Delivery, but can be supplied with an ordinary delivery board if desired.

This Offset Press is built in three sizes:—

Machine No.	Size of Sheet.	Size of Design.
	in. in.	in. in.
No 1	37½ x 52	37 x 52
No. 2	33½ x 45½	33 x 45½
No. 4	25 x 37	24¼ x 37

LINOTYPE & MACHINERY LTD.

9 KINGSWAY, LONDON, W.C.2

to variation of the two sides, it must be remembered that the paper starts with its underside pressed to the wire, which leaves the wire mark almost always visible. New developments increasing the number of suction and press devices help to overcome this by making the action more gradual.

Substance.

This trouble is accentuated by the small orders which are so prevalent to-day. When out of a ton order one has to make six or more sizes and weights, it is obvious that the machine has scarcely been adjusted for one substance before it is time to change to the next. This means extra waste, and the possibility of some paper getting through slightly off weight.

Shade.

This is one of the real problems which can be only overcome by skill and experience. Stuff is very easily affected as regards colour, and it is not sufficient to put so much colour per beater throughout a making to get a regular shade. Each chest must be exactly matched before it can be used; and as a paper mill runs night and day from Monday morning till Saturday night, the colour must be matched correctly, no matter what the light conditions are. Daylight lamps are used for dark days and night-time, but the best of these do not give exactly the same conditions as daylight, and this is a fruitful source of trouble. Qualities of paper to-day are legion, which fact is accentuated by keen competition for orders, but the shades of these qualities are infinity. Consequently each order needs a new shade, and here again small runs handicap the paper-maker badly. To hit each successive shade means waste, which he is only too anxious to avoid. Fewer qualities and colours and larger runs would soon show a beneficial result.

The question of the variation in shade of the two sides of a sheet also arises sometimes, but this will be found to be almost universal in some degree or other. With machine-made papers it will be always found that when pigment or absolutely fast colours are used the colour is deeper on the top side than on the underside, whereas with aniline tints the opposite is visible though the variation is very slight with these latter colours.

Variations in successive makings is also a complaint. Naturally careful records are kept of all the particulars of each making, but using exactly the same formula and furnish is not sufficient to ensure that the paper will be just the same. Whereas with wood pulp being a semi-manufactured material, one has a fairly constant factor to work on, no two deliveries of rags are exactly the same; and when the Americans sweep the country for rags, as they do periodically, the papermaker in this country has to get what he can and to use his skill to level up the differences in succeeding parcels. Water may also be an inconstant factor. A huge quantity of water is used in papermaking; at our own mill we use about 20,000 gallons per hour for washing, steam making and general purposes. This is all carefully treated and filtered, but the most careful commercial treatment will not give water which is always just the same.

Paper Not Cut Square.

I think that this trouble is being overcome with modern cutters as a general rule. Of course, there is always a little paper cut out of square at the commencement of each reel, when the knives are being adjusted, but this should all be taken out.

Soft Sizing.

This also should not be met with often from modern paper mills. The human element which was frequently to blame for this trouble has been largely eliminated by the introduction of easily operated rosin boiling plant and automatic measuring apparatus to ensure that each beater receives its full allowance. Defective supplies or breakdown of plant may still give the trouble sometimes, but it is no longer a serious difficulty.

I may mention under this heading that the stationer or wholesale house who substitutes an engine-sized paper for a tub-sized one, for the sake of price, must not blame the paper-maker if his customer complains later that the paper is not as hard as it used to be. If it were possible to give the hardness of a gelatine sized paper with rosin, the T.S. trade would not be in existence now.

Effect of Conditions on the Finished Sheet.

The two conditions which have the greatest effect are temperature and the humidity of the air surrounding the sheet. Moisture makes the paper stretch, and the greatest stretch takes place in the cross direction, or at right angles to the making direction. This stretching property is the explanation of the wavy edges which worry the printer. The paper is usually machine finished, as this trouble should not occur in tub-sized papers, and consequently it has just been rapidly dried from a watery mixture of pulp, and in spite of cooling rolls, which may give the paper the feel of being reeled up quite cold, the fibres have actually had no opportunity to settle down or accustom themselves to their new condition.

In the reel little air can get at the paper, and consequently they are not exposed to the atmosphere again until the reel is cut up into sheets. The paper must be reeled up quite dry, otherwise finish would be a matter of pure speculation, and consequently the air nearly always contains more moisture than the paper does. After cutting, the air has free access to the edges of the sheets, and these stretch; but as the whole sheet does not stretch evenly all over, the result is a wavy edge. Now this effect can be overcome by various methods of maturing, so that the paper is in a more composed condition before it is cut off. But this will not solve the problem; it may be then able to withstand the normal atmosphere and the variations of temperature during the journey to its destination without harm; but all this is spoilt if the printer is going to print in a warm or hot room. The paper will dry up again, and the opposite result of creases in the middle will occur owing to the contraction of the sheet. This can be adjusted by hanging in the printing room, but this incurs extra expense and takes up a lot of room. The most economical results, I find, are obtained when the paper-maker finds out, on regular lines, exactly what state of maturity suits his customers' requirements best, and can keep to this particular state. Strong sunlight will fade any paper in time to some degree, and even papers which have been tinted with fast-to-light pigment colours show considerable fading after having been some time in tropical climates.

The normal conditions of travel also spoil quantities of otherwise good paper. No tape or wrapper will stand up to indiscriminately rough handling. For high class papers for offset litho work I think boards top and bottom of the ream will always be found to be an economy in spite of the extra initial cost, particularly in large sizes of sheets.

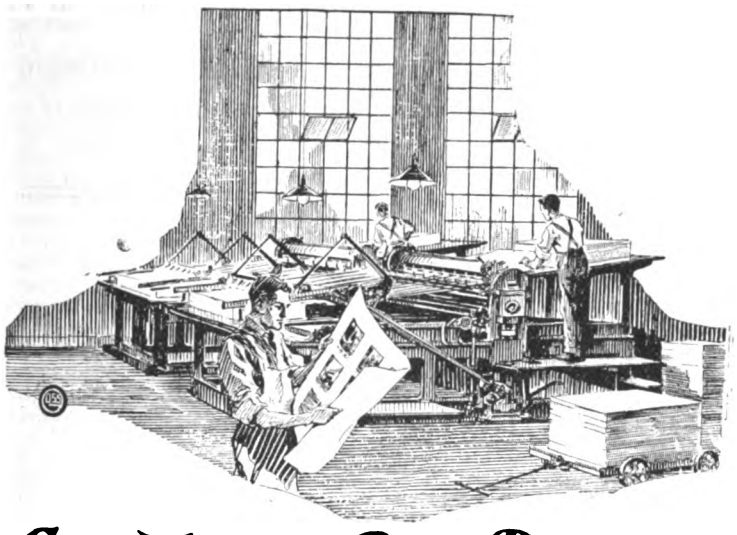
This completes my short survey of the process of papermaking, but in conclusion let me say one more word. No matter how good the mill or how perfect the conditions or how efficient the printer, the very best results cannot be made certain unless there is confidence and co-operation. If the printer will tell the wholesale stationer just what he wants, and the latter will pass the information on to the mill, the mill will always respond and do its best to give exactly the quality required. No one can do justice to a making of paper from a sample a couple of inches square, with no other particulars than the size and weight required. Granted the above, and when general conditions permit of paper being bought on account of its suitability for the work in hand, regularity and quality, rather than on a price basis only, British paper mills will come into their own again, and the "cheap foreign paper" bogey will be finally laid.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NEW ZEALAND.

A firm of agents established in Christchurch wish to obtain the representation of British manufacturers of stationery, etc., for the whole of New Zealand, either on a commission or purchasing basis. (Reference No. 572.)



SOUTH AFRICA.

The chairman of the Union Tender Board, Pretoria, invites tenders for the supply of quantities of printing papers and bookbinders' materials. Amongst the items required are: Royal boards, postal pulp boards, cloth-lined boards, gummed paper, letterpress and lithographic ink, gummed tape, paper-lined cloth, calf, persian morocco, skivers, etc., stapling wire, etc., etc. Tenders must be received in Pretoria by 3 p.m. on Wednesday, June 17th, 1925. Further particulars may be obtained by firms interested in the supply of goods manufactured in the United Kingdom, upon application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

SWEDEN.

A commission agent in Stockholm desires to secure the representation for Sweden of British firms dealing in chemicals. (Reference No. 591.)

Exhibition Notes.

The Exhibition of Printing and Allied Trades at the Agricultural Hall is now drawing to a close, and has fully justified itself both in respect of the number and character of the exhibits, and also of the attendance day by day. A feature of the display has been its practical character, and visitors have appreciated this fact, as evidenced by the close attention which they gave to the various exhibits.

The stand of Messrs. Stonhill and Gillis, showing the *British and Colonial Printer and Stationer*. the *World's Paper Trade Review*, technical books, etc., has attracted much attention. Visitors from all parts have taken the opportunity of renewing acquaintance with the representatives of these old-established journals, and universal interest has been exhibited in the miniature edition of the *British and Colonial Printer and Stationer*, which has been a unique feature in the literature of the Exhibition.

The stand of the Federation of Master Printers has been the meeting ground of the leading men of the industry. The wide range of costing forms and booklets is evidence of the fine organisation which has been introduced into the whole of the printing industry. The many phases of the work of the Federation are indicated at this stand, and representatives of the Federation have been present to provide a variety of information to inquirers.

Photo-Engravers' Exhibit.—One of the most attractive exhibits is that of the Federation of Master Process Engravers. It has been a revelation of what can be done in the way of organised effort, for the room was fitted up as a beautiful restful lounge and all around were the exhibits of individual houses. This is the first time a combined exhibition of process engravings showing all that is newest and best in the craft has been attempted, and it is a fine tribute to the work of the Federation that such a co-operative display has been made possible and indicates the great advance that has been made in the direction of friendly rivalry and endeavour to excel in place of the old feeling of mistrusts and suspicion.

The display of the various kinds of work shows that process engraving has attained to a very high position, so far as quality is concerned. It is impossible here to deal with the display on each of the 15 sections, each shows so much that is valuable and interesting, and is a clear indication that, whatever may be the claims of the newer processes that have come into competition with it, process engraving is still to the fore and is well able to stand up to its competitors. The firms exhibiting are: Craske, Ltd., Garratt and Atkinson, The Marshall Engraving Co., Knighton and Cutts, Vaus and Crampton, Star Illustrating Co., Sun Engraving Co., John Swain and Co., Ltd., Grout and Co., The Strand Engraving Co., The Nickeloid Co., Vitty and Seaborne, Ltd., Hislop and Day, The Half Tone Engraving Co. and the London and Provincial Reproduction Co., Ltd.

The Typary and Typon stand is still one of the outstanding features of interest at the Exhibition. They have had large numbers of visitors from all over the world who have displayed the greatest interest in the text typing machine and the Typon process. As a direct result of the Exhibition a number of these machines have been sold, and there seems now to be no doubt as to the success of the Typary Text Typing Machine. Amongst visitors to the Typary exhibit were Lord Burnham, Sir Wm. Waterlow, Mr. W. Howard Hazell, Mr. Wm. Gamble, Brig.-Gen. Bemrose, Mr. A. E. Goodwin and Mr. J. R. Riddell.

Messrs. Geo. Mann and Co., Ltd., have had large numbers of visitors to inspect their fine show of the well-known Mann machinery. The following machines have been sold:—Eight crown two-colour Perfecting Rotary Offset to Messrs. J. Weiner and Co, Ltd., of Long Acre, who are now doing their own work upon it; quad demy single-colour Rotary Offset, H.T.B. semi-automatic Feeder, and double demy single-colour Rotary Offset to the Calcutta Fine Art Cottage, India; three double demy single-colour Rotary Offsets and two double crown rapid single-colour Rotary Offsets with Mann automatic feeder to Messrs. J. West Watts and Co., Ltd., Leicester; Baby Rapid demy folio single-colour Rotary Offset with Mann automatic feeder to Messrs. Bemrose and Sons, Ltd., Derby; Baby Rapid demy folio single-colour Rotary Offset to Messrs. Joseph Causton and Co., Ltd., London.

Many practical problems, we hear, have been brought to the metallurgical experts who are always in attendance on the stand of Fry's Metal Foundry. Special attention has been attracted by the greatest novelty on this stand, namely, Fry's Dross Container, two patterns of which are shown, one for use with a sack, and the other which requires no sack, and which is used where dross can be collected by road. It is probable that no item in the whole Exhibition is of such striking importance to the health and well-being of printing operatives as this apparatus. Great interest has been shown by the Home Office authorities, the Joint Industrial Council and the trade societies.

The Ben Day Rapid Shading Mediums are of great assistance to the lithographic printer and the photo engraver. They enable a variety of tints to be applied with speed and accuracy The outfit is ingeniously divised and of beautifully finished workmanship. Mr. Reginald Eccles, who is the sole agent for Great Britain, the European Continent and the Colonies, has been demonstrating the apparatus at the Printing Exhibition, and the simplicity of manipulation, together with the service rendered, have made a deep impression on all who have witnessed the display. The mediums are for use on stone, metal and cardboard, and the apparatus is additionally adaptable in that it can be adjusted to any part of the material being worked upon. The variety of tints and stipples which can be applied give a wide range of decorative effect. For the convenience of clients sets of Ben Day shading mediums can be hired at an inclusive charge per annum. They include 25 different plates, and the client is kept supplied with all necessary renewals or exchange of plates.

Messrs. Connoll and Coles, Ltd., have had remarkable results with their Vertical Job Press, which on account of its sturdy and "All British" manufacture, and its exceptional value, has made a tremendous appeal to jobbing printers in particular. One of its chief features is the revolutionary price, and this invariably causes great surprise. The firm are making a special offer for all presses ordered during the Exhibition. Apart from orders which will keep them busy on the home trade for some time, they have orders from Australia, New Zealand, China, Holland, Africa, etc. Any printing concern, even if not actually contemplating an increase in plant, will do well to inspect the "Vercyl," as this type of machine has proved its value, and has undoubtedly come to stay. It only requires 4 ft. square floor space, and is "manned" by the Platen Society.

Messrs. Harrild and Sons have been attracting considerable interest with their new double-geared automatic self-clamping guillotine, and other machines of special interest to the binder and manufacturing stationer, including multiple power paging machines and rotary perfecting machines; also one of their postage stamp perforating machines similar to those recently installed at the Government presses for the perforating of postage stamps. Their box making machinery has also been a feature, including a carton-making machine turning out 40,000 per hour.

Some very useful trucks and appliances for handling new and waste paper, as also for other impedimenta of the printing office, are shown by H. H. Stark, Ltd., in the Gallery. Carrying and lifting devices in almost every conceivable form are manufactured. Strength and adaptability are features which will appeal in the printing office. Another line which has recently been developed by Messrs. Stark is a waste paper baler, which will admirably serve the purpose of keeping the printing office tidy. It is simply and stoutly constructed of wood and stands 4 ft. high, being 2 ft. square on the outside. A hand lever enables the requisite pressure to be brought to bear upon the contents. If a length of string is first of all placed inside the press, when this is full the string can be tied, and by unlocking the front the bale can be turned out neatly and compactly tied up, ready for dispatch.

We hear that both employers and employees in all branches of the printing and allied trades have taken advantage of the Printing Trades Alliance information bureau, and that the enormous amount of literature distributed and the many friendly discussions that have taken place at the stand must tend to clear up many misunderstandings as to the constitution and purposes of a union of employers and employed such as the Printing Trades Alliance.

The "Super Tudor" black letterpress inks produced by Messrs. Dane and Co., of London and Edinburgh, are being used at the Exhibition on Messrs. Connoll and Cole's "Vercyl" machine with great success.

A grand bohemian concert was held on Monday in the Princes' Gallery by the Caxton Convalescent Home, Limpsfield, Surrey, Mr. W. White, the secretary, occuping the chair in the unavoidable absence of Mr. C. J. Drummond. Among the principal artistes in an excellent musical programme were Miss Pauline Sexstone, Miss Rosina Hudson and Mr. George Pryce. The function was supported by a large attendance, which included the Rt. Hon. C. W. Bowerman, J.P., M.P. The concert was held in aid of the Building Fund of the Home, for which a collection was made during the evening.

Zinc and Copper Process Plates

Used by all the Leading Newspaper and Process Houses in the British Empire. Supplied in all Gauges and Sizes. Also High Grade Zinc and Copper Plates for Etching, Engraving, Mezzotint, Aquatint, and Artists' Requirements.

Joint Industrial Council.

Convention Held at Islington.

By the courteous invitation of the Printing Exhibition authorities, the second Convention of the Joint Industrial Council of the Printing and Allied Trades was held at the Royal Agricultural Hall on Wednesday of last week. The Convention is provided for in the Constitution of the Joint Industrial Council; it is open to all members of the industry, and it provides the opportunity for a joint gathering of the members of the national Joint Industrial Council—consisting of 35 leaders of the industry from the two sides representing the employers and the employed—and of the members of the District Committees which have been established throughout the country with a more local sphere of influence. The Convention lasted throughout the day, and the members were entertained at lunch by Mr. F. W. Bridges and the Council of the Exhibition.

Mr. G. A. Isaacs, chairman of the J.I.C., presided at the Convention, and in the course of his address said that during the four years since the first Convention had been held, the Council had learned to sit up and take notice and to insist upon being taken notice of. It had reached the period when the component organisations consulted and sought the advice of the youth that had so soon become surprisingly lusty, vigorous and well-informed, before embarking upon actions that seemed to go beyond the regular methods of peaceful negotiation. He paid a warm tribute to the work and to the members and chairman of the Finance Committee, the General Purposes Committee, the Health Committee, the Organisation Committee, the Unemployment Committee and the Apprenticeship Committee. In regard to the work of the Health Committee he recalled the fact that it was at Leeds in 1918 that the late Mr. Walter Hazell, with a member of one of the trade unions, had been first appointed as a kind of Interim Health Committee before the J.I.C. had actual existence.

The keystone of the Council, he continued, was confidence, and the keystone of the structure was the Conciliation Committee. It was nebulous, in that it had no regular members other than the chairman and vice-chairman of the Council, all other members being appointed specially to deal with each separate case. It was illogical, inasmuch as the parties appearing before it appointed their own share of the jury from among their own friends and supporters, and yet remained quite free to reject the opinions expressed by those whom they had themselves so appointed. It was powerless, because it could not lay down a decision, but was restricted to the recording and expressing of opinion—a finding—which both the parties were free to accept or reject. Yet it had become powerful by virtue of the confidence that had become reposed in it. If the Conciliation Committee was the keystone, the Joint Industrial Council was the bridge that united the employer on one side and the employee on the other. Its foundations were understanding and knowledge of each other. Its two main columns of support were the joint secretaries, Mr. A. E. Goodwin and Mr. A. E. Holmes. The stream that passed beneath the bridge and had separated the two parties was the River of Misunderstanding, the denizens of which were mistrust, ignorance and bitterness, but which was now beginning to recede. Across the bridge traffic was flowing both ways. Employers were beginning to know better their workers and those who represented them, and to realise something of the worries of the workers' life. The workers also were getting a glimpse of the problems that daily confronted their employers and the troubles that beset the industry. Out of such knowledge came peace.

Health Problems.

The subject of health problems in printing works was opened by Mr. E. H. Lee, chairman of the Health Committee. He said the members of the Committee were gratified that any recommendations made to the Council had been well received. Mr. Isaacs had referred to the late Mr. Walter Hazell having had associated with him a member of a trade union: that man was Mr. G. A. Isaacs. The Health Committee had been set up not because healthy conditions would give better output, but because they felt it their duty to do anything that could be done to improve the health conditions in the workshop. There was nothing mercenary behind the employers' idea. Mr. W. C. Warren, secretary of the National Society of Electrotypers and Stereotypers, had given a demonstration to the Council of a new Dross Container (Fry's), to which the Council, while not prepared to recommend any particular appliance, had given its blessing and approval. He spoke of the general health inquiry in the industry that was to be undertaken by the Council in co-operation with the Newspaper Proprietors' Association, and also of other efforts being made.

Mr. I. Forsyth, vice-chairman of the Committee, dealing with the subject of ventilation, said that fresh air, which was so necessary to life, would *pay*.

Mr. Valentine Knapp said he was proud of the fact that it was during his presidency of the Newspaper Society that that organisation had become part of the J.I.C. He supplemented the reference to the Dross Container by stating that the Newspaper Society had subsequently recommended its use.

The discussion that ensued was mainly on the question of tuberculosis, although Mr. Woodgate Stevens (Lithographers' Society) urged the almost greater need for considering cancer, from which complaint the majority of his members who had died during the past three years had suffered. Mr. T. E. Naylor urged the committee to inquire into the incidence of consumption among the lower paid workers, and the effect of under-nourishment, under-feeding, and bad conditions in their homes. Mr. H. W. Howes made a suggestion for which the chairman of the Committee thanked him—that in the absence of Government figures the secretaries of the trade unions should supply figures for the past five years from their records of deaths from consumption both of their members and their wives. Mr. Isaacs stated that the N. S. O. P. and A. had just completed an exhaustive inquiry into the subject, and the figures which would shortly be made public to the whole trade would give the information which the Government had not yet given. Mr. W. T. F. Jarrold urged the need for isolating consumptives who were sent from sanatoria incurable. Messrs. W. G. Appleyard (Middlesbrough), W. Howard Hazell, Ashworth (Bradford), J. Bellows (Gloucester) and others also took part in the discussion.

Training Apprentices.

The training of apprentices in technical schools and printing works was dealt with by Mr. J. D. French, chairman of the Apprenticeship Committee. He claimed that the apprenticeship scheme formulated by the committee, although it had not been without criticism from both sides, had set the ball rolling. The old system of indentured apprentices had been dying out, but they hoped to resuscitate it, but it would be necessary for all and sundry to lend their assistance. If proper training were given, employers would not be able to say that men were not properly trained. The past four years had seen something like a revolution in the setting up of technical schools. He regretted as much as anybody present the attitude taken up by some branches of the Typographical Association. Anything done by the J.I.C. must be a united effort, and every society affiliated to the J.I.C. should make it imperative, if possible, for everybody to come into line.

Mr. W. Howard Hazell said the responsibility of the employers in the matter could be summed up in three words: select, train and encourage. A successful scheme was in operation, specially suitable for a large business, where a copy of each indenture was sent to a director, who interviewed the apprentice once a year, and awarded marks, which were indicated on the back of the indenture, for punctuality, industry, etc., and a bonus was given according to the marks obtained. At the end of the period the lad had a valuable document, which he could show to any future employer. Technical education, whereby the lad could learn something of the processes that followed and preceded his own, were of great value. Schools had been established in most of the larger towns, but he suggested the employers should endeavour to arrange classes in country towns, where at least theoretical instruction could be given. At his Aylesbury works the local authorities had been approached, and paid the expenses of instructors to come from London and 80 per cent. of the instructors' fees for classes, which were open to all the printers in the town.

Mr. Geo. Eaton Hart spoke of the valuable work done at such schools as the L.C.C. Wild-street School in Drury-lane, which apprentices attended for eight hours per week from the age of 14 to 16, and received a secondary course of instruction with a bias towards printing; and the School of Arts and Crafts, where there were scholarships until the age of 16, with the same bias, at which age, by arrangement with the trade unions, the lads entered upon a five years' apprenticeship, starting with the third year rate of wages.

Mr. J. R. Riddell entered a warning against schemes of education being too ambitious. Education must be such as to suit the needs of the trade. It was a waste of time to teach boys of 14-16 lay-outs, if they could not set a decent paragraph of straight matter. Scholarships, with a bias towards printing, were a good thing, but if boys were not "placed" before they started on the course it would lead to the undesirable practice of parents offering high premiums to get them into certain firms.

Mr. G. Harraway and Mr. G. C. Jones urged that greater attention should be given to technical education for women, and Mr. Shardlow (Leicester) and others also took part in the discussion.

District Committees.

The first subject dealt with in the afternoon was that of the value of district committees, Mr. H. A. Bethell, chairman of the Organisation Committee, opening the discussion. Better understanding between individuals could only be achieved, he said, by meeting together, and the district committees were that part of the J.I.C. which would bring them together and bring two lines of thought into one line. Mr. Bethell quoted extracts from reports of the 37 district committees already in existence, and concluded by saying that he had once been opposed to the J.I.C., but he had never regretted the day that he came to hold another opinion.

Mr. R. Kneale, vice-chairman of the committee, said the district committees were the rank and file movement of the J.I.C. He did not think it would be possible to re-organise the central J.I.C., which was composed mainly of officially minded persons, but a man who was not an elected official but was full of excellent matter for the improvement of the trade, could find his opportunity in the district committees.

Mr. W. Wildman, a member of the Manchester branch of the Typographical Association, suggested that the Organisation Committee should take up propaganda work among the executive officials of both panels, and said that if the officers of the trade unions would go into the workshops and say "This thing will work," there would be no branch outside. The "bridge" also needed buttresses—which were the workshop committees.

Mr. Embleton said that if petty jealousises and bickerings could be swept away, the functions of the central J.I.C. would be considerably strengthened. Mr. G. C. Jones contended that printers locally must be responsible for forming district committees and establishing works advisory committees, and Mr. Lucas gave a report of effective work being done in Derby.

Peace in Industry.

Peace in industry was the subject allotted to Brig. Gen. W. Wright Bemrose, vice-chairman of the J.I.C. There was no question, he said, that the J.I.C. had contributed towards peace, and there appeared to be no limits to the good work the Conciliation Committee would be able to achieve in the future. It had never failed to arrive at unanimous advice to offer the parties in dispute. It had not only settled the recent dispute in London, but had been left in such a state that with care and moderation it would go forward to even greater and better work. If it was to do so, however, it was up to everyone to see that the Constitution was observed.

Mr. H. Skinner (past chairman of the Council) said the J.I.C. was little known and less understood among many employers and workers in the industry. The inclination on the part of some branches to rush into a "scrap" before going before the J.I.C. was an attitude that would have to be changed.

Mr. Frank Murrell said that in 1924 there were 692 trade disputes involving 613,000 workpeople and 8,312,000 work days. There were 56 Joint Industrial Councils covering three million workpeople. The Ministry of Labour stated that there was no big dispute in any of the industries where a J.I.C. was in existence, and where sectional disputes had broken out they had been settled in the minimum of time.

Lord Burnham who arrived while the meeting was in progress and was specially asked to address the gathering, spoke of the obvious

Digitized by Google

difficulties in the way of the London daily newspapers being brought into the J.I.C., but he was by no means satisfied with its impossibility. The natural resources of this country were failing to some extent in competition against countries where electricity could be produced practically without cost, and unless there was pooling of mind and intelligence in this country the outlook was bad.

Mr. E. W. Spackman said the J.I.C. had played a glorious part in demonstrating the usefulness of peaceful methods, and it had been successful largely because it was a voluntary organisation.

Mr. A. E. Goodwin (joint secretary) said the contribution that had been made to the Printers' Pension War Orphan Fund as a result of the Flag Day organised by the Organisation Committee was a striking instance of the usefulness of the Council. Another appeal would be made this year on the last pay-day in June. In the provinces instead of flags, a method of collecting sheets would be adopted. In London the Flag Day would be continued, and if the provinces also desired flags they would be supplied.

The Luncheon.

Among those present at the lunch, when the members of the convention were entertained, were the Right Hon. Lord Riddell, the Right Hon. C. W. Bowerman, M.P., the Right Hon. F. O. Roberts, M.P., Mr. T. E. Naylor, M.P., Mr. E. E. Alexander, M.P., Mr. D. T. John (Ministry of Labour), Mr. F. W. Bridges (organiser of the Exhibition), Mr. V. Knapp, Mr. F. L. Armstrong (secretary, Newspaper Society), and Messrs. A. E. Goodwin and A. E. Holmes (joint secretaries, J.I.C.).

Mr. W. Howard Hazell, as president of the Exhibition, occupied the chair, and proposed the toast, "The Joint Industrial Council." He said that the machinery that could be seen at the Exhibition was not the end of everything. The J.I.C. was endeavouring to deal with the human side and the many great problems that faced it. The employers could not prosper if the employees were not prospering too.

Mr. G. A. Isaacs (chairman of the J.I.C.), expressed the pleasure he found in responding, not for one section or side, but for the whole industry. The J.I.C. was now thoroughly established in the industry.

Mr. C. W. Bowerman, proposing the toast of "The Visitors," acknowledged the presence of members of both Houses of Parliament, and also referred to the work done in the House of Commons for the J.I.C. by two ex-members present—Mr. Isaacs and Mr. Frank Murrell.

Lord Riddell began and continued in humorous vein, referring to the Newspaper Proprietors' Association as the lost sheep who were outside of the fold of the J.I.C., because of the low wages paid in their section of the industry!

General W. W. Bemrose proposed the health of the chairman and of Mr. F. W. Bridges. Mr. Hazell briefly replied, and the company called for Mr. Bridges, who stated that he had learned in South Africa that the J.I.C. there was largely the outcome of the Council in this country. A speech was also demanded from Mr. McQuitty, who said there could be no success in this country unless capital and labour pulled together.

Trade Duplicate Book Co., Ltd.

This firm's exhibits at the Printing Exhibition are of very exceptional interest, because they appear to us to have brought in a very thorough manner the secret of successfully marketing through the trade a very wide range of productions which, in the usual way, are purchased only from big specialising houses selling direct to the user. It has always been our opinion that such lines as specially printed duplicate books, counter check books and calendars can and should be sold by the local printer and stationer to his local customers and we are glad to find a wholesale house making a very decided and, we understand, successful effort to make this possible.

The Trade Duplicate Co.'s lists are designed to give the utmost service to the trade, for these in no instance bear their name, being so arranged that the printer can use them in presenting the various lines to his own customers without divulging the source of supply.

The quality of the work appears to us to be of a very high standard, while the liberal discount and the sale service embodied in their list should enable even the small printer to build up a profitable business. We understand that free copies of their list will be sent to those printers and stationers who are unable to inspect their goods at the Exhibition.

The address of the Trade Duplicate Book Co., Ltd., wholesale manufacturing stationers, is Abbots Langley, Herts; Telephone, King's Langley 74.

THE many friends of Mr. W. A. Sherlock, the representative of the Ulverston Paper Mill Co., Ltd., will regret to learn of the sad bereavement sustained by him by the death of his wife, whilst himself in hospital after undergoing an operation. Mrs. Sherlock accompanied her husband to the Manchester Royal Infirmary on Saturday, the 9th inst., and on returning home was taken ill, being subsequently removed to the Eccles and Patricoft Hospital, where she died on the 14th inst. after an operation for appendicitis. The interment took place on Monday last at the Peel Green Cemetery, Patricroft, in the presence of a large gathering of relatives and friends. Mr. Sherlock is progressing as favourably as can be expected under the very sad circumstances.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines **6d**

Sales by Auction, Tenders,

Good Business.

THE impression gained from a final view of the Printing Exhibition at Islington is that much solid business has been transacted by many of the exhibitors. Some substantial orders for machinery and appliances have been actually placed, whilst inquiries have also been set on foot which are likely to bear fruit. Visitors to the Agricultural Hall have for the most part been those practically associated with the printing industry. They have come to take note of the latest developments, and to avail themselves in their businesses of the ingenious devices which have been evolved by the experts. Accordingly the exhibits have been carefully examined, and they have made such an impression that sales have been on a very encouraging scale. Allied displays have met with equal success, we believe. Moreover, in addition to actual orders, the Exhibition has brought about that close touch between suppliers and consumers which is the necessary precursor of business. It is obvious that many master printers and manufacturers of stationery goods are alert to the necessity of maintaining their establishments in a state of efficiency, and in helping them to achieve this object the Seventh International Printing Exhibition has well achieved its purpose.

* * *

Unemployment.

THE state of industry is indicated by the condition of employment last month. In the paper trade employment remained fair on the whole. Although in some districts work was good, in others a good deal of short time was reported, and, in the brown paper section, employment was slack generally, as also in the hand-made trade in Kent. With letterpress printers employment was fairly good generally, but showed a slight decline on the previous month in most districts; at Edinburgh and Glasgow, however, an improvement was reported; at Birmingham employment was reported as slack. With electrotypers and stereotypers employment continued good. In the lithographic printing trade employment continued fair on the whole; it was, however, reported as bad at Manchester. With lithographic artists employment was reported as fair in London and slack at Manchester, and worse than in March in both cases. With bookbinders employment was again moderate on the whole; short time was prevalent in London, but an improvement on the previous month was reported. The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 5·4 at April 27th, compared with 6·1 at March 23rd and 5·7 at April 28th, 1924.

Size of Picture Post Cards.

Enlargement Resented by Trade.

Publishers, wholesalers and retailers of picture postcards are up in arms against the possible introduction of a larger size of official post card authorised by the Postal Union Congress, whose new regulation is to come into force on October 1st next.

At a meeting of the trade convened at Stationers' Hall last week by Sir Adolph Tuck, Bart., strong disapproval was expressed of the new regulation. The meeting confirmed the election of the Advisory Committee and the resolution passed at the meeting of picture post card publishers held at Raphael House on March 11th, 1925, to the following effect: "That in the opinion of this meeting of publishers of picture post cards the proposed increase in the size of post cards for inland postage is unnecessary and undesirable, and is bound to involve the picture post card trade in a serious loss." The meeting further resolved not to issue or prepare for issue or purchase or handle in any form picture post cards or local view post cards of a larger size than 5¼ by 3½, and arrangements were made with a view to ensuring a united and continuous boycott of the enlarged size.

Sir Adolph Tuck, introducing the subject at the meeting, mentioned, as a possible explanation of the new regulation, a friend's surmise that the representatives of the smaller more indigent States of the International Postal Union, mindful only of the interests of their own countries, were asked to give their public the opportunity of writing on a post card, naturally carried at the lower rate of postage, as long a communication as possible, and that this request for an enlarged size post card was probably carried at the Congress by a majority of these smaller States, while our own Government, always the first to respect the wishes and interests of minority States, accepted the vote as a matter of course. This explanation, he said, seemed natural enough and probably summed up the situation correctly. Certain it was that when he asked the Postmaster-General to receive a deputation on the subject protesting against an enlarged size post card, the P.M.G. replied that no useful purpose would be served by his receiving the suggested deputation, the introduction of the larger size post card proposed by the Postal Union having already been accepted by him. That this innovation of the permitted larger size post card acted directly against the best interests of the picture post card trade of all countries, the minority States included, was evident from the fact that post card traders, publishers and printers all over the Continent, at once became alarmed, promptly held meetings and passed resolutions to the effect that they would have nothing to do with any picture post card larger than the present size, viz., 5½ by 3½ ins., pledging themselves not to print, publish or distribute or to countenance the distribution of any larger size picture post card.

Amongst the grounds for objection which Sir Adolph proceeded to enumerate were: That the limitation of the space for writing on the present size post card is one of the chief causes of its popularity; that a larger size would mean an increased price; and that the innovation would mean a reduction in value of present stocks.

The resolutions were moved by Mr. Percy Barringer and seconded by Mr. Lambert (of the Photochrom Co.), while among the speakers were Mr. H. G. Butler (of the Regent Publishing Co.), Mr. F. Huckle (of Messrs. John Dickinson and Co.), Mr. Morris Birn (of Messrs. Birn Bros.), and Mr. Stanley Kisch (of Messrs. A. M. Davis and Co.).

Federation of Master Printers.

Visit to the Exhibition.

A special invitation was extended to the members of the Federation of Master Printers to visit the Exhibition on Thursday last, and a large number were present from all parts of the country. The Council of the Federation were entertained at lunch, and all the members were invited to tea by the Council of the Exhibition.

At the lunch, Mr. W. Howard Hazell (president of the Exhibition and president of the Federation) occupied the chair and there were also present, in addition to a representative gathering of the members of the Federation, Mr. R. Allister (president of the South African Master Printers' Federation), Mr. Philip Dodge (president of the American Linotype Co.), and visitors from India, South Africa, Zanzibar, Sierra Leone, France, America, Sweden, Peru, Nigeria, Holland and Australia.

The chairman, who proposed the toast of "The Federation," said the Exhibition was framed with the intention of benefiting everybody concerned, and that the efficiency of the industry should be increased. Efficiency he described as producing in the shortest time by the best method at the lowest cost the goods the community desired to buy. Such an achievement was almost impossible without an exhibition, because for one thing it enabled printers to compare at first hand the many articles which the salesmen always claimed to be "the best." He thought that master printers could be divided into three groups: those below the average efficiency, who were always complaining of bad trade and cut prices; those of average efficiency, who, although complaining there were no profits, at least maintained their position and tried to improve it; and those above the average efficiency, who would never admit that they were making big profits, but would say that trade was not as bad as it might be. The Exhibition was an excellent opportunity for every master printer to try to place himself in the third category of super-efficiency.

Mr. J. A. Stembridge (vice-president, Federation of Master Printers) said the Federation had always been closely associated with the Exhibitions. It had come into existence four years before the first Exhibition, and had just celebrated its 25th anniversary while the Exhibition was celebrating its majority. There had been a great advance in machinery since 1904, but he did not think the high water mark had been reached.

Mr. R. A. Austen-Leigh (past president of the Federation) proposed the health of "The Overseas Visitors." He remarked that one of the most agreeable by-products of the Exhibition was that it brought them into touch with printer colleagues and confreres from overseas. As a result of the enthusiasm of the late Mr. Zachrisson, of Sweden, an international conference of master printers had been held in Sweden. They had hoped, after a fruitful meeting there, to meet periodically in the future, but the machinery had not yet been set up. They were therefore the more grateful to Mr. Bridges for the meetings with overseas printers that he made possible. Printers the world over had much in common. They all had to deal with the just remuneration of labour, the proper training of apprentices, and the correct discovery of costs. If they did not possess a common language they at least had a common heritage; they were all the spiritual heirs of—whoever invented printing. There were present representatives from France, the country of Garamond and Plantin, of the Etiennes and the Didots; from Holland, the land of Elzevirs; and from the great Republic of the West that produced Benjamin Franklin in the past and Bruce Rogers of to day. He coupled the toast with the names of Mr. R. Allister and Mr. Philip Dodge.

Mr. R. Allister said that coming from South Africa, with a white population that did not exceed 1½ millions, they were overwhelmed to look around such an exhibition. As president of the South African Master Printers' Federation, he expressed appreciation of the encouragement and help they had received from the Federation in Great Britain. In some ways they had gone further, in that they had registered their national agreement under the Conciliation Act, making it compulsory for every printer to pay a standard rate of wages and to work a definite number of hours. The Government had placed the Federation of Master Printers, the Press Union, and the Typographical Union in full control of the Conciliation Act so far as the printing trade was concerned, and a special sub-committee dealt with cases of contravention of the Act. They were appointed to control the apprentices, and the Joint Industrial Council had a committee with an independent chairman who decided whether a master printer had facilities to train apprentices. Mr. Allister added that a colleague had accompanied him—Mr. F. W. Knightly, Government Printer of Pretoria.

Mr. Philip Dodge (president, American Linotype Co.), who also responded to the toast, said he felt sympathy with British printers of common blood, common sentiments and a common cause. There was an increased warmth of feeling because of the war and their co operation. The feeling throughout America was that they were one, with common aspirations, and in the changes that were taking place in the world, English-speaking people had to stand together as one. In Wales, the first cart to be drawn by horses was overturned; in France, the house of the inventor of the loom had been mobbed; in America, when the linotype was first introduced, the machines were wrecked, the offices set on fire, and the men mobbed; but only the other day Mr. Gompers, the great American labour leader, had urged the men not to oppose the introduction of machinery, which led to the improvement of the working classes. The printing art had reached stupendous proportions already, but it would not stop there.

Mr. W. B. Wykes (ex-president, Federation of Master Printers) proposed a vote of thanks to the chairman and to Mr. F. W. Bridges and his two sons.

Mr. W. Howard Hazell and Mr. F. W. Bridges briefly responded.

GLASGOW STATIONERS' COMPANY.—The annual meeting of the Company of Stationers of Glasgow was held recently, Mr. Andrew Johnston presiding. The financial statement showed that at the end of the year the company's funds amounted to £17,595, an increase of £470. During the twelve months pensions and grants amounting to £686 had been paid. Mr. Samuel A. C. Todd was elected president, and Mr. Mungo B. Ferguson treasurer for the ensuing year.

S.-E. London Master Printers.

Visit to Eynsford Paper Mill.

An outing both pleasurable and instructive was made by the Association of Master Printers of South-East London on Tuesday of last week, when, at the invitation of Messrs. Spicers Ltd., the Association visited the hand-made paper mills at Eynsford, Kent.

The party consisted of about 60 ladies and gentlemen, who left the Elephant and Castle by charabancs at 1 p.m. for their journey to the Spicer's mill which is situated amid picturesque Kentish scenery; the drive through the orchards, with fruit trees in blossoming perfection, was not the least of the attractions of the excursion.

Arrived at the mill, the visitors were taken upon an extensive tour of the various departments, their conductors being Mr. H. Higgins, Mr. W. Oliver (two of the directors) and Mr. Hussey (the mill's papermaker). The tour of the premises concluded with an entertaining episode when the visitors were taken to the mould room and eight ladies of the party, chosen by ballot, entered into competition in the making of a sheet of paper each The process caused much amusement to the onlookers, if also some trepidation among the participants. It was announced that the two winning ladies would receive orders upon a milliner's for new hats.

The party then proceeded to the Lion Hotel, Farningham, where they were the guests at tea of Messrs. Spicers Ltd. At the conclusion of the meal the very hearty thanks of the visitors were, at the call of Mr. H. R. Grubb (president of the Association), expressed to Messrs. Spicers Ltd. and those who had so kindly acted as guides.

At 6.30 a move was made from the Lion Hotel, and the party visited Wrotham Village, in order that they might enjoy the superb view from the top of Wrotham Hill. There followed a pleasant drive back to town, the Elephant and Castle being reached at about 8.45, and thus ended an outing, which was voted on every hand to have been a most interesting and enjoyable one.

LAKCSET

The Bookbinder

London Chamber of Commerce.

REPORT OF THE BOOKBINDING SECTION.

Several matters of importance to the bookbinding industry are mentioned in the annual report, just issued, of the London Chamber of Commerce It will be remembered that the chairman of the Bookbinding Section of the Chamber is Mr. John Græme Bain and the vice-chairman Capt. J. L. Mercer. The executive committee comprises Messrs. J. Alexander Bailey, Arthur E. Calkin, A. S. Colley, J. Crowlesmith, J.P., F. Grey, L. G. Kitcat, Major Robert Leighton, Mr. E Macintosh, Mr. Ernest Straker, and the officers. The members meet weekly at the Holborn Restaurant for the transaction of current business. The Section speaks for the London bookbinding industry, particularly in labour matters, and, by virtue of its affiliation with the Federation of Master Printers, is represented on the National Wage Basis Committee and thus takes part in all wage settlements affecting bookbinders.

For the period under review—the year 1924—the report states that, on the whole, trade showed some improvement upon the preceding twelve months when, in addition to a lack of orders, a strike paralysed operations for several weeks.

The following are further paragraphs in the report:—

Bible Work.—Perhaps the most notable achievement of the year, and the most unexpected in view of the failure attending many previous attempts to grapple with this thorny question, was the drafting of an acceptable definition of Bible Work. The definition may be given:—

"Bible prices shall be paid for all complete Bibles, irrespective of the paper on which they are printed, so long as they only contain the books of the Bible with or without customary marginal references. Bible prices shall also be paid for Bible Commentaries, Testaments, Psalms, Service Books of any denomination, including 'Key of Heaven,' and 'Garden of the Soul,' Prayer Books and Hymn Books, unless printed on paper heavier than Double Crown (20 by 30), 28 lbs., 516 sheets to the ream, or its equivalent weight in other sizes."

The last pay day in January, 1925, was fixed for bringing this arrangement into operation and a scale of equivalent weights of paper, to facilitate the calculation in borderline cases, was printed for posting in the shops

Demarcation of Labour.—The Paperworkers' Branch of the Union formulated an objection to certain operations being carried on by girls—tying up and bundling from the folding machine, boxing, taking from the press, opening up and jacketting, etc. A conference with the London District Committee of the Union was arranged and subsequently a visit was paid to the Greycaine Company's works. Up to date nothing further has been heard of the matter.

Holiday Payments.—It has been the custom, in the binding industry, to pay pieceworkers for Bank Holidays at the time rate. A decision of the Hours and Holidays Committee of the Federation, however, laid down that the pay should be on the basis of the earnings of the preceding six months. At the request of both the Section and the Union, the Committee agreed to the time rate method being continued in binding shops. It was also mutually agreed that the same system should be adopted for the summer holiday. The Section decided that, in a five-day house, payment for, say, a Monday Bank Holiday should be the amount which a worker would have earned on that day had the shop been open.

Labour Returns.—In order that the Committee may be fully acquainted with the facts, a quarterly return is now obtained from members of numbers employed, wages paid and piecework earnings.

Apprentices.—The Section agreed with the Union that the word "year," in the Arbitration, 1903, Clause governing the calculation of the proportion of apprentices, means the twelve months preceding an appointment.

Stoppages in Individual Shops.—An endeavour was made to put an end to the stoppages which continue to occur in individual shops in spite of the rule of the Joint Industrial Council which prohibits this. Particulars of several flagrant cases were communicated to the Council, but nothing tangible resulted, although the Union, in theory, expressed their adherence to the Rule.

The Stationers' Company and Printing Industry Technical Board.—A contribution of Five Guineas per annum is made towards the expenses of examinations and lectures organised by this body, including also the Prize Fund.

Royal Society of Arts.—A sum of Fifteen Guineas is also given annually for prizes in the Book Production Section in connection with the scheme of this Society for improvement in industrial design.

Various.—Other matters before the Section during the year included Casual Labour, Pasting Cloth Labels, Cut Leather Covers, Employment for less than a day, Gusset Pockets, Indexing Machines, Carmen and Unloading, Pasting Stiffeners, Map Folding, Standing off, Interleaving with tissue, Placing Registers in Books, Charges for Trade Deliveries and looking out quires, Rating of Machinery, Wrappering and the running of machines by the employer, together with certain projected legislation, viz., the Hours of Employment Bill, the Factories Bill, and the Industrial Councils Bill.

Notes and News.

Trade Tide Slackens.

As is to be expected at this period, the volume of trade in the bookbinding line is somewhat slacker than earlier in the year. There has not been much vivification of business since the relapse which accompanied Easter, and now we have the Whitsuntide holiday upon us and the prospect of summer ahead. Happily, however, it cannot be said that trade has reached an exceptionally low level for the time of year, even though the unfortunate bookbinding strike added to the usual adverse factors of the spring season and there is ground for hope that when the normal summer slackness shall have spent itself the next busy season will bring at least as good a trading period as the one just past.

The Prices of Materials.

The market for materials shows little sign of change in any direction. The most notable indication of movement that we have observed is in respect of leathers, which have stiffened a trifle in price. Other supplies, including bookcloths, buckram, canvas, boards, tapes and threads, remain on the whole at stable figures, and give little promise of any easing down—much as the bookbinder, especially the small man, may desire reduction in price of his raw materials to meet the clamant demands of his customers for quotations below the current high standard.

The Progress of Invention.

Mr. W. Howard Hazell, J.P., who, as president of the Federation of Master Printers, is also president of the Printing Exhibition, has written for the *Daily Telegraph* an informative article on the progress of the printing craft as suggested by the Exhibition. In the course of his article Mr. Hazell remarks: "The invention of machinery has been applied to all the different branches of printing, and notably in binding books. Fifty years ago the binding of a book was carried out entirely by hand. To day bound books are scarcely touched by hand. The flat sheets of printed paper are placed in a machine which has almost human sensitiveness. India-rubber fingers lift a sheet, separating it from the others, and pass it on to another machine, which folds it into 8, 16, or more pages. In order to make a complete book, another machine picks up section after section, until all the pages are collected. The complete book is sewn together by machine, and the sewn book is then glued and prepared for its cover. The cloth cover is glued and folded by machinery, and finally it is picked up and affixed to the book by machine."

Machinery and Price Reduction.

"The result of all this inventiveness," Mr. Hazell adds, "has led to the reduction in the cost of printing, and has brought within the reach of the poorest in the land the advantages of books, magazines, and newspapers of all kinds. What were formerly the luxuries of the rich are now considered the necessities of the man with a small income"

A Bookbinder's Passing.

Mr. Josiah Groves, for many years head of the bindery in connection with Messrs. Hazell, Watson and Viney's Aylesbury establishment, passed away on Tuesday of last week at the age of 57. Mr. Groves' demise will be regretted by a large circle of friends connected with the bookbinding trade both in Aylesbury and in London.

Niger Leather for Bookbinding.

Referring to the recent lecture by Mr. Cedric Chivers, of Bath, before the Royal Society of Arts (reported in our issue of April 30th), the *Leather World* has some comments to make in respect of the use of Niger leather for bookbinding. "What seems remarkable," says our contemporary, after mentioning Mr. Chivers' tests of leathers, "was his assertion that one of the most striking facts noticed in

Digitized by Google

the results was the superiority of Niger leather the use of which he strongly recommended, although he admitted it had imperfections of appearance to which some binders objected. Most of us are, we suppose, familiar with Niger tanned goatskins, and from our own personal experience we know how great is the tensile strength of the leather. But the tanned and dyed skins are crude in appearance, and we cannot help feeling that if they were turned out by British dressers and dyers they would find little demand. Mr. Chivers, however, said that he found it harmful to dye Niger leather, and was therefore opposed to its being dyed, whilst he is also reported as saying that he had not been able to obtain leathers which were really acid free."

Effect of Dyeing.

With regard to this same subject Messrs. E. and J. Richardson, of the Elswick Leather Works, Newcastle-on-Tyne, state that they are in full agreement with Mr. Chivers in his statement that Niger leather is a very excellent wearing material for binding books, but do not agree that re-dyeing has any harmful action on the leather provided it is done in a proper manner.

The National Book Council.

The inaugural meeting of the National Book Council, which has as its object the promotion of book reading and the wider distribution of books, was held at Stationers' Hall, on May 14th.

Prominent members of the following five associations and societies interested were present: The Incorporated Society of Authors, the Publishers' Association, the Publishers' Circle, the Associated Booksellers, and the Society of Bookmen. Mr. G. S. Williams was elected to the chair.

The following resolutions were passed:—

(1) "That this meeting approves of the formation of the National Book Council and hereby formally constitutes the said Council."

(2) "That this meeting approves in principle the draft constitution prepared by the provisional committee, and that the provisional committee be instructed to prepare the form of final constitution of the Council."

(3) "That this meeting approves of the proposal that two-thirds of the seven hundred and fifty pounds called for shall be borne by the publishers, and one-third by the booksellers, and that each body shall be left to make its own arrangements for the provision of the funds."

Paper Bag Trade Board (Great Britain).—Notice is given of a proposal to vary minimum rates of wages for male workers by an alteration in the definition of certain of the classes of workers to whom existing minimum rates apply. Machine tacklers and learners are the classes concerned.

Government Contracts.

Contracts were entered with the following firms during April:—

H.M. Stationery Office.

Printing, Ruling, Binding, etc.

Contract for (a) Photo Lithographic Printing Group 243 (1925); (b) True to-scale Lithographic Printing Group 244 (1925).—Malby and Sons, London, N.

22,000 Books, Form 620.—Burrup, Mathieson and Co., Ltd., London, S.E.

50,000 Form 7S, Attendance Register; 375 Books M. 57, H.S. Admiralty.—W. P. Griffith and Sons, Ltd., London, E.C.

4,700,000 (approx.) Form P. 435; 500,000 Form R.F. 10; 6,000 Books Death Certificates.—H.M. Stationery Office Press, Harrow.

15,000 Pads Form S. 1322 Admiralty; 5,000 Books C.I.D. Diary No. 24; 1,400 Form 90E; 1,000 Telegraph Message Books; 2,000 Army Book 193; 5,000 Books, Mines and Quarries, Form No. 50; 3,000 Books O.E. 1004, Post Office.—McCorquodale and Co., Ltd., Wolverton.

8,500 Books Form 674, Air Ministry.—Metcalfe and Cooper, Ltd., London, E.C.

1,500,000 Minute Sheets M.S.B.—Miller and Sons, London, N.

800,000 Forms U.I.3, with U.I.69 attached.—Pearce and Gardiner, Ltd., Chorlton-cum-Hardy.

Repairing 900 "P" Boxes.—A. E. Walker, Ltd., London, N.

1,500 Books P. 1035; 3,500 Books T.E. 1076; 8,050 Form 341 T.L.; 1,170 Quarterly Assessment Books 1925/6; 2,750 W/T. Log Books, Form 398; 400 Army Books 211; 2,000 Sub-Office Postal Order, Stock and Sale Books.—Waterlow and Sons, Ltd., London, E.C.

200,000 Sheets, Telegram Form A.1.—Willmott and Sons, Ltd., London, E.C.

20,000 Books P. 1022.—John Worrall, Ltd., Oldham.

Process Engraving.—Contract for Group 242/1925.—John Swain and Son, Ltd., London, E.C.

Carbonic Paper.—Ellams Duplicator Co., Ltd, Bushey; Waterlow and Sons, Ltd., Dunstable.

TOTTENHAM PRESS, LTD.—H. Rainsbury, of 65-66, Basinghall-street, E.C., was appointed receiver on May 9th, 1925, under powers contained in debentures dated November 30th, 1923.

G. E. STEVENS, LTD. (printers, etc., Coventry).—M. G. Dadley, of 16, Hertford-street, Coventry, was appointed receiver on May 6th, under powers contained in debentures dated January 6th, 1925.

Trade Notes.

OWING to pressure on our space this week the report of the visit of the Printers' Managers and Overseers' Association to the Exhibition on Saturday, the visit of the Electrotypers and Stereotypers Managers and Overseers' Association on Monday, and other items have had to be held over till next week.

THE General Purposes Committee of the Birmingham City Council have decided to make an application to the Government authorities to establish in Birmingham a branch of the Stationery Office, which, it was stated, would be of great convenience to the traders in the city and the surrounding district.

ALLIED NEWSPAPERS, LTD.—The first ordinary general meeting of this company was held on Monday at the Cannon-street Hotel, E.C., Sir William E. Berry, Bart. (the chairman), presiding. In the course of his remarks Sir William told a story of a very satisfactory first year, with growing advertising revenue and large acquisitions of newspaper properties. In regard to printing facilities, he said: "We have maintained our plant at Manchester in a thoroughly efficient manner, and during the year spent the sum of £113,438 in additions. I think I am right in saying, and it will be of interest to you to know, that we have in Manchester what is probably the largest newspaper plant in this country, or, indeed, the whole of Europe."

FIRE AT GLASGOW PRINTERY.—The premises of the Labour Press, at 50, Renfrew street, Glasgow, were seriously damaged by fire last week. The fire originated on the second floor of the premises and the interior and contents were practically destroyed.

A NEW Labour weekly for Tyneside is projected, and it has been decided to form a limited liability company, to be known as Tyneside Labour Newspapers, Ltd., with a capital of £500, in £1 shares.

AN exhibition of modern French wood engravings at the St. George's Gallery, 32A, George street, Hanover-square, provides an excellent idea of the range and attraction of wood engraver's art, as it is now practised. About 30 artists are represented.

SIR EDWARD HULTON, who died on Saturday at his residence near Leatherhead, at the age of 56, was till about 18 months ago the owner of a large group of newspapers, being the founder of the business of Edward Hulton and Co. His father, originally a working compositor on the *Manchester Guardian*, started in the early '70's first the *Sporting Chronicle* (daily) and then the *Athletic News* (weekly). About 1885 the elder Hulton took his only son away from school before he was 16, and set him to learn the business. When he retired in 1923, he is believed to have sold his newspaper properties for six million pounds. The most important of these were the *Sunday Chronicle*, *Sporting Chronicle*, *Athletic News*, *Daily Dispatch* and *Manchester Evening Chronicle*, *Daily Sketch*, *Illustrated Sunday Herald* and *Evening Standard*.

Personal.

SIR HERBERT MORGAN has, we understand, expressed his willingness to occupy the chair at the next festival dinner of the Printers' Pension Corporation.

AT a meeting of the Council of the London Master Printers' Association on Monday, Mr. Maurice Clowes (Messrs. Wm. Clowes and Son, Ltd.) was elected president of the Association in succession to Mr. Alfred Langley. Major Clowes will enter upon presidential duties about the middle of June.

As vice-president of the L.M.P.A., the Council elected Mr. R. B. Simnett (Baynard Press).

MR. J. H. WILLIAMS (Williams, Lea and Co., Ltd.), was re-elected treasurer.

THE cordial thanks of the Association were expressed to Mr. Langley, retiring president, for services rendered to the Association and the craft generally during his period of office.

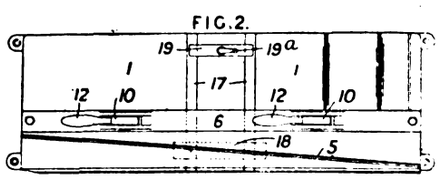
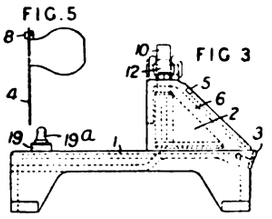
Tripping Printing Machines.



A sheet detector mechanism for tripping printing machines, as patented by the Harris Automatic Press Co., comprises a plurality of detectors, preferably arranged normally in advance of the front stops for the sheet feed, each detector being capable of tripping the printing cylinders if the sheet does not act on it. The machine is thus tripped if a sheet is not fed, or if it is not registered accurately, or if it is torn or folded back at the edges. The detector mechanism is adjustable for dealing with different kinds of stock. As applied to a machine in which the sheets are registered against rising and falling front stops 20 individually adjustable on an oscillating shaft 21, and are fed by rollers 13, 15 to the grippers of an impression cylinder 9, a plurality of detectors 25 are carried by levers 27 mounted on brackets 29 on the arms of the stops 20. The detectors are adjustably connected to the levers 27, and normally are maintained in a vertical position in front of the stops by means of springs 32, the detectors passing through slots in the feed plate 17. Each detector controls the position of a lever 35 formed with a thrust block 41 which is moved between two jaws 50, 51, of levers 45, 49, if the detector corresponding to any of the levers 35 is not acted upon by the sheet. The block 41



causes the rocking lever 45 to act upon the lever 49, and a latch 53 is released, thereby permitting a shaft 56 to be rotated by a spring and thus by a crank-mechanism to rotate eccentric bushes in which the cylinder 9 is mounted, and thus trip the cylinder. In a modified form, Fig. 7, the latch 53 is operated by lever-mechanism from a shaft 69, which is rotated by an oscillating bracket 68, when a pawl 73 thereon engages a shoulder 74 of an arm 75 fixed to the shaft 69. The pawls 73 are integral with detectors 66 arranged in front of the stops 20. The bracket 68 is freely mounted on shaft 69, and is oscillated by a cam 80 on the shaft of the upper feed roll. A pawl 73 engages the shoulder 74 when the sheet is not fed correctly to the corresponding stop 20, but normally this engagement is prevented by the positive movement of the detectors 66 by the sheet.

Card Bevelling Apparatus.

Messrs. Peters and Co., Ltd., and Mr. G. S. Walpole have patented an invention that relates to apparatus for cutting the bevelled edges on cards, of the type in which a loose manually-operated blade is guided by an inclined block with inclined guiding means to co-operate with a dead knife fixed parallel with the surface of the table. According to the invention, the dead knife 3 is secured at an angle to the front of the table 1 and the movable blade 4 is guided by a projecting rib 8 attached to the blade engaging an inclined slot 5 in the inclined block 6. This latter

bridges the table 1 and contains a clamping block 2 depressed against spring pressure by cams 10 actuated by levers 12 which may be placed on the top or sides or at the rear of the block. Sliding bars 17 flush with the table top and secured in position by a clamp 19, 19a carry a guide 18 for use in cutting narrow cards. The movable blade may be circular and be fitted with a shield.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Some Practical Machines.

Distinctive Appliances for the Trade.

There is possibly no other sectional business in which such a variety of machines is required as in the printing and allied trades, and these are being continually added to and improved, until it becomes a somewhat difficult matter to keep pace with the many different appliances that are offered for use in the various sections of the businesses connected with paper and print, appliances designed with a view to secure a saving of labour and economy in output. Among the firms that keep to the front in the introduction of up-to-date machinery for the allied trades is the Practical Machines Co. (A. T. Gadsby), Ltd., whose works are situated at 46, Camberwell-green, S.E.5, with City offices and show-rooms at 125, High Holborn, W.C.1. Our representative visited the Camberwell works of the firm the other day, and was courteously shown over the somewhat extensive premises, and had the merits of the different machines that are made by the firm demonstrated by seeing them at actual work. The variety of machines that are turned out at the Camberwell works is so great that it is impossible to enumerate them all in a brief notice, but we propose to describe a few of the more notable for the benefit of our readers.

An important appliance that has been designed and constructed on entirely new lines is the Table Bronzing Machine, which is of an extremely compact character, and quite different in appearance from the ordinary form of massive construction that one is so familiar with in printing offices. This bronzer is so constructed that it can be placed on a bench or can be supplied with a stand, and can be easily shifted from one position to another, if required. It will bronze anything, from thin papers to heavy boards, and will take book covers, calendars, metal sheets, box tops, or, in fact, anything that may come its way. There is a feed board in front, from which the work is fed to the machine, and passing over the bronzing rollers, it then goes over the wiping cylinders, and emerges at the other end of the machine on to a delivery board. A feature of this bronzer is the way the bronzing rollers are cut off from the wiping cylinders, the former being so enclosed that no waste bronze escapes, and this renders the wiping easier and cleaner. There is no waste and no dust, and no vacuum is required. This new form of bronzing machine has distinct advantages over the old cylinder form of machine. It requires little power to drive, and there are no grippers, so that continuous laying-on secures an increased output. It is made in six sizes, 7 in., 15 in., 16 in., 24 in., 32 in., and 40 in. wide. This bronzer has become popular, not only with printers but with cardboard boxmakers, Christmas card manufacturers and others. A feature of the machine is its noiseless running, every part being so carefully adjusted that its smooth working is assured.

The wide range of "St. George" machines for glueing, gumming, varnishing and pasting provides appliances suitable for every kind of work that can be undertaken in this line, and supplies the need for continuous-feed machines of simple construction and not likely to get out of order, there being nothing complicated in their design, while they possess features that put them in a class by themselves for the ease with which they may be operated. In Type A1 we have a machine for whole-surface work that will coat or gum paper in various widths, the machines being built in 8 in., 12 in., 16 in. 20 in. 24 in., 32 in., 40 in. and larger sizes, so that all requirements can be met. The trough of adhesive is above the feed rollers, and the glue or gum is carried by a special roller over a slanting chute direct on to the main distributing roller, any superfluous glue running back into the trough. The material to be gummed is carried along underneath the distributing roller, and delivered, coated side up, on to the travelling band. The capacity of the machine is such that six or more operators may work on each side of the band, while one feeder only is required. Type A4 is designed for strip and edge work, and operates on the same principle as A1, but instead of having a solid surfaced roller, it has a shaft on which brass disks of varying thicknesses are placed. These disks are capable of being placed in any position on the shaft, to suit the work in hand, and the adhesive is fed to the disks by a chute above each, so that by removing a chute any of the disks may be made to run dry. The same machine can be delivered as Type A 2 for edge and whole surface work, and as Type A 6 for strip, edge or whole surface coating. The coating may be regulated from the thinnest to the thickest, and in these machines the turning of one lever makes an instantaneous alteration from thick to thin coating; at the same time it adjusts the guide rule and also cleans the distributor at the moment of interrupting the work. The machines mentioned work equally well with hot or cold glue or any liquid material, and may be used for varnishing or gumming labels and sheets of all kinds, while they are especially suitable for fine chromo work or for stamped or embossed material, which can be coated without in any way damaging or injuring the embossing. There is also a Type A 5 machine in which there is no travelling band, the sheets being fed and taken off by hand.

A very useful machine for edge gumming is the Special Tip Gluer, which is extremely simple in construction and easy to use. The material of which the edges are to be gummed is placed in a pile on the machine table, the adhesive reservoir is then placed in position on top of the edge to be gummed and the operator simply pulls away the top sheet, and continues to pull off top sheets till the pile is exhausted, each sheet having had its edge thoroughly gummed by this simple operation. For small jobs in edge gumming this appliance is excellent, such, for instance, as postal wrappers, sheets, loose leaves, flies for boxes, labels, etc. Another machine is intended for gumming the backs of books, a job that has always been a rather messy one when done by hand with a glue brush. In this appliance the adhesive is contained in a trough over which is a perforated plate. To gum the book backs, as many as can be lifted at a time in both hands are taken, placed on the perforated plate and pressed down, when the plate gives a little and the adhesive comes up through the perforations and glues the backs of the books thoroughly, the pressure forcing the glue up between the sections of the book, and doing it more effectually than if done by hand. The superfluous glue is removed by a special brush, and returned to the tank without any loss. The machine has three divisions in the glue trough, and can be used as a glue pot for three thicknesses of glue. There are many more types of these useful gumming machines, and exigencies of space prevent us referring to them all in detail, but before leaving them we may call attention to the Type O machine for glueing round tubes or caps. It is often desired to put a band of glue round and near the edge of a tube, to affix a top or bottom. This appliance does this work in a clever manner; it has a glueing disk running in a tray of adhesive, and above this is another disk, this latter being the one to which the tube or cap is attached, and by pressure on a treadle it can be brought down to touch the revolving glueing disk, and so obtain a band of glue. The machine is fitted with horizontal and vertical table, the latter being slotted to allow of a very wide range of sizes being worked. It is also fitted with a clutch pulley, a jacketted tray and gas jet.

The firm also manufactures a Tube Winding Machine for use in making the cores on which paper is wound or reeled as it leaves the paper-making machine. It is strong but simple in construction, and fitted with a number of tension and smoothing rollers, over which the web passes on its way to the glueing roller and the winding mandrel. This latter is made to expand, and works in a long swivel bearing that allows of the mandrel swinging towards the operator, thus allowing the finished tube to be easily detached. On this machine tubes can be made thick or thin, and the automatic mechanism that stops the machine when the tube is sufficiently wound is most useful. This tube winder is made in various sizes, from 42 inches up to 92 inches wide. A companion appliance is also made that cuts up the finished tubes to any required lengths; it is made in corresponding sizes to the tube winder, and plain mandrels with or without cutting rings are used for cutting instead of the more expensive gripper mandrels.

Another Tube Rolling or Winding Machine for lighter work is made in various sizes to make tubes 24 in., 30 in., 36 in. and 42 in. in length. It is a well and solidly built machine, and is easily operated. If required, it can be fitted with an attachment to cut the tubes into lengths, but the makers generally recommend a separate machine for this purpose to prevent the cutters grooving and spoiling the more expensive gripper mandrels that are used for winding.

A specially interesting machine was in course of construction in the works at the time of our representative's visit. It was designed to seal packets of tea or other goods with an embossed seal and was of an ingenious character. A continuous strip of coloured paper was fed into the machine automatically and this was gummed, embossed in the form of seals, cut out, and the seals automatically affixed to the packets of tea as they were fed through the machine. Quite a self-contained appliance this was, and intended to supersede the sticking on of seals by hand.

A useful appliance for the papermaker or manufacturing stationer is the Sheet Cutting Machine, which is made to take reels of paper of from 24 ins. to 50 ins. in width and cut them into sheets of sizes that may be varied by setting an ingenious mechanism attached to the side of the machine. This appliance will cut from one or more reels, as required, and will take any thicknesses from tissues to thin boards and cut equally well, while for crepe paper it is excellent, as by the addition of a rotary cutter or cutters the web may be cut into small sheets. There are also several makes of slitting and re-winding machines that are adjustable to cut strips of any width, from half-inch upwards, and capable of dealing with widths of paper up to 56 ins., and that are just the thing for the busy manufacturing stationery establishment.

Besides the appliances we have mentioned, the firm supplies rotary cutting and scoring machines, bending machines, rule benders for boxmakers, rotary cardboard cutters, punching machines, round cornering machines, ruling machines, baling presses, and a number of other appliances, for particulars of which we must refer our readers to the firm's catalogue.

We may here note that Mr. A. T. Gadsby, the head of the firm, has had a long and interesting experience of machine manufacture for the allied trades. At one time he was the sole manufacturer and licensee of the Silverlock Bronzing Machine, one of the earliest appliances of the kind on the market, and since starting the present business some twenty years ago he has devoted his energies to the designing and manufacture of the class of machines that we have referred to above, all of which are made at the St. George's Engineering Works, Camberwell-green, S.E., and in this connection we may note that the firm has taken St. George for its trade mark, and the machines now bear this title. The company is represented also in South Africa, South America, India and Canada, in which latter country its machines are handled by the Canadian Typefoundry. It is also represented in Australia, and in Egypt it has an agency in Cairo. Those of our readers, either at home or abroad, who require machinery of the class handled at the St. George's Works would do well to get in touch with the firm and judge for themselves the efficiency of their various appliances.

NO BOARDS FOR BALES

of ART, ENAMEL, GUMMED or PLAIN PAPER

Typical Bale weighing cwts. 2 qrs. 3 lbs. 4

Method of Baling.

PATENT App. No. 30327-24.

By a simple and economical patent system we have eliminated all the worries of paper baling.

No creasing or string marking.

Hermetically sealed, the bale is dust, damp and pilfer-proof.

In daily use for bales up to 2½ cwt. and 50" long without baling boards.

The saving effected in packing charges is almost incredible.

HOW IS IT DONE?

On receipt of Enquiry we shall give full particulars and also arrange for demonstration in your own dispatch department free of all obligation.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

Direct half-tone photo-metalithography for offset work is a more complicated and difficult process than the line photo-litho process, as the copy is of a continuous-tone nature, and this has to be translated into tonal printing values by means of variously sized printing dots in graduated masses of representation. Several technical conditions are hence set up, such as "Screen Distances," "High Lights," variation of "Diaphragm Stops," etc., all of which have to be negotiated by the negative operator; but with the experience acquired with line work, and the aid of mechanical devices, such as the Douthitt diaphragm apparatus, the difficulties are readily overcome, and the work can be carried on expeditiously.

Direct Half-Tone for Offset.

For this process, then, either a ruled screen or a Metzograph grained negative is used. The procedure, as regards the plate and the formulas employed, is the same as for the line process previously described, with this exception: the character of the negative is somewhat more delicate than that of the line subject; consequently there is not quite the same latitude in exposure admissible. When, however, a little experience has been acquired, excellent work can be obtained by these screen tone methods, and perfect printing results will be the reward if the ammonia etcher is used. Although not absolutely necessary, it will be a safeguard if the preliminary gumming-up is done by means of a gum solution, composed of nine parts of gum arabic solution and one part of the ammonia etcher solution, well mixed together. This will keep the plain parts free from the danger of catching during the first rolling-up (before the etching operation proper has been performed). Should the plate be required for any special purpose, such as printing on hard resistive papers, and the printing have to be done from a direct printing litho machine, not fitted with offset attachment, then the work would have to be etched in high relief as previously described.

Photo-Metalithography by Transfer Paper Methods.

This class of work embraces two methods: one (the old method) by means of gelatinous coated papers, sensitised with bichromate of potassium solution; and the other (newer method), which consists of a gum coated paper in which the sensitising is accomplished by means of the ferric salts.

In the bichromate method, sheets already coated with the gelatine may be purchased from the supply houses. Pieces of this paper are cut to the size of the negative to be used, and are then sensitised by immersing them for one minute in a bath of the sensitiser made as follows:—

Bichromate of potassium ...	¾ oz.
Water	1 pint
Liquor ammonia	8 drops
(or just sufficient to turn the water to a straw colour).	

A smaller quantity of bichromate salt may be employed in summer time. The temperature of the solution should be about 60 degs. Fahr. After immersion, the plate is squeegeed down upon a ferrotype plate, and dried in the dark, when it becomes fully sensitive to light action. It will keep good for a couple of days, but should be used as fresh as possible.

For copying, the dried sensitive photo-paper is placed in contact with the film of the negative, in the printing frame, and then exposed to light. For fine work it is advisable to print in diffused light. When, on examination, the lines of the image appear of a light brown tint, the copying has been carried far enough. The printed paper is now removed, and its exposed surface inked-up with a thin film of re-transfer ink, previously thinned down with oil of lavender or turps, applying it with a letterpress roller as before. It is now immersed in a dish of cold water for about fifteen minutes, then laid on a glass plate, printed side upwards and developed with a swab of moist cotton wool, until all the lights of the pictures are perfectly free from ink. If the image does not develop readily, it should again be immersed in water for five minutes, then re-developed. After a final rinsing under the tap, it is allowed to dry. Some practitioners use warm water so as to hasten the development.

In transferring this photo-litho transfer to the zinc plate, a stout shalloon board backing should be used on top of the setting sheets, in order to prevent squashing or smashing of the ink under pressure. For the same reason the zinc plate should be cautiously run through the press under light pressure, gradually increasing it with each pull through until the transfer paper will strip off, leaving all the ink on the plate. A final rinse under the tap is given to remove all adhering particles of gelatine; the plate is gummed and fanned dry, the job washed out, rolled-up with black ink, resined and chalked, cleaned up, etched with the non-corrosive etching solution, gummed, and is then ready for printing. Half-tone photo-litho transfers undergo similar treatment to the foregoing, but need careful attention, to prevent loss of tone values during their preparation.

Ferric Photo-Litho Transfer (Amphitype).

This is a new process invented by one of my old students, Mr. Henry Shawcross, of Liverpool, and is the latest method of photo-litho transfer work, being more speedy and convenient than the bichromate method. This paper is prepared with a gum, and another viscid colloid, together with certain ferric salts which are the sensitive media. One of the features of this paper is that it is always ready for immediate use and does not require any preliminary treatment. Another valuable quality is that it will keep for an indefinite period. A small portion of this paper cut to the size of the negative, in a non-actinic light, is placed in complete film contact with the negative in an ordinary photographic

printing frame. Wet or dry plate or paper negatives may be employed, the time of exposure being very short, usually about two minutes when using an enclosed arc lamp of the Hall type. Theprinting frame should be placed about a foot away from the source of light. After exposure, no visible image is apparent, but this appears immediately after the next operation. When the exposure has been made, the "Amphitype" paper is taken from the frame and inked up with photo-litho transfer ink, which has been thinned with turps as in the preceding method.

After allowing the turps to evaporate for a couple of minutes, the inked-up transfer is immersed in a bath of ferrocyanide of potassium (saturated solution) which dissolves away all the lights of the picture, leaving the image charged with a thin layer of re-transfer ink. A swab of cotton wool passed lightly over the inked surface, aids the development, and final rinsing under the tap completes the operation. After lightly blotting off the excess of water with a clean sheet of blotting paper, the transfer is laid in position on a clean zinc plate, and pulled through the press about three times, when, on removing the transfer paper it will be found that the whole of the ink of the transfer has left the paper and adhered to the plate. This is gummed up and fanned dry. The work is then washed out, and rolled up in black ink, resined, chalked, cleaned up, etched with the non-corrosive and finally gummed up, when it is ready for printing. By this process also an actual negative image on zinc can be prepared direct, as a transfer—that is a transposition-work transfer produced, or a positive image can be obtained from any translucent copy, without the aid of a negative or camera.

Work prepared by all these processes prints admirably by the offset method.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

GERMANY.

An agent established in Berlin is desirous of securing the representation of British manufatcurers of blotting paper, writing paper, better quality paper for catalogue printing, chromo paper, photographic paper, also steel pen nibs and holders for same. (Reference No. 615)

SOUTH AFRICA.

The Chairman of the Union Tender Board, Pretoria, invites tenders for the supply of quantities of printing papers and bookbinders' materials. Amongst the items required are: Royal boards, postal pulp boards, cloth-lined boards, gummed paper, letterpress and lithographic ink, gummed tape, paper-lined cloth, calf, Persian morocco, skivers, etc, stapling wire, etc. Tenders must be received in Pretoria by 3 p.m. on Wednesday, June 17th, 1925. Further particulars may be obtained by firms interested in the supply of goods manufactured in the United Kingdom upon application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1. (Reference No. B.X. 1,794.)

The Printing of Paper Money.

INSIDE CLOSELY GUARDED WORKS.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

The business of printing paper money is more or less a sealed book to the general public, for the work is done in well-guarded factories to which only a privileged few, with proper credentials, are ever admitted.

The firms in Great Britain who are engaged in security printing may almost be counted on the fingers of one hand, and all the London firms engaged in the business are very old-established: some are more than a century old, and have been carried on in the same family throughout the whole period of their existence.

London has always been the great centre for security printing. As the financial hub of the world it provides a unique outlet for bank notes, cheques, bonds, bills of exchange, letters of credit, debentures, share warrants, stamps, and all kinds of allied securities. Almost every country in the world places orders or has placed orders, with London firms for this class of work. Some countries have set up their own engraving and printing plants, but invariably they have had to come to London to acquire the technical knowledge and to recruit their staffs. They have also found it better to have some of their more important work done in London.

Formerly it could be said that there were no better note engravers in the world than those in London shops, but the United States has made a bid for this supremacy and, by engaging some of the best engravers in Europe, as well as by intensive training of new men, has succeeded in equalling and in some respects excelling the productions of the London houses. English firms frankly admit that some of the finest bank note engraving in the world is done in the United States, but they ascribe this to the greater appreciation on the part of American banking interests of first-class engraving and the consequently lavish expenditure in securing the best possible work. There is, no doubt, equal skill, experience, and mechanical facility in this country, but not the opportunity to display the best that can be done, owing to the conservative attitude towards elaboration of design and printing in security forms.

An American Opinion.

I have had the opportunity of discussing this point with Mr. Daniel E. Woodhull, president of the American Bank Note Company—the largest concern in the world exclusively devoted to security printing—during his recent visit to this country, and he expressed the view that our Treasury and banking interests are wrong in their policy of ignoring the advantages of first class engraving and printing as a means of effectually preventing fraud and forgery. In the United States well-engraved vignettes were believed to be an effective protection against counterfeiting, because such work was the most difficult to engrave, and men who could do this engraving were scarce. The American Bank Note Company are training young men especially for vignette engraving, and have achieved a considerable degree of success, as for example in the case of the very beautiful series of portraits of the King, the Queen, and the Prince of Wales engraved for the Canadian notes.

Foreign countries which have their notes printed in London invariably demand work of a highly ornamental character, both as regards design and the number of colours employed in the printing; it is this class of work which enables London firms to display to the fullest extent their skill and ingenuity.

A few decades ago the engraved documents for banking and financial operations seemed to have been made as secure as human ingenuity could conceive, but the great progress of photography and mechanical processes of reproduction has rendered useless many of the old expedients for achieving security. To-day the firms engaged in the business have to watch carefully the march of science as it affects the printing trade, and they must employ every scientific aid to defeat the cunning of the counterfeiter and forger. The printer of security documents must, in fact, bring to bear on his work the joint efforts of artists, engravers, chemists, photographers, printers and mechanics, together with the resources of the whole circle of applied science. Photographic experts are employed not only in aiding the engravers, but in testing whether their work is secure against any possible method of reproduction.

Producing the Plates.

It must not be supposed that a single engraver is employed throughout in the engraving of a bank note. A plate is the combined effort of a whole staff of engravers, each a specialist in his own particular branch of engraving. Before a note is engraved a very careful coloured drawing is made, and this has to look as nearly like the ultimately-printed note as possible. When this drawing is approved each engraver proceeds to engrave the portion he is specially fitted to undertake. One will engrave the borders on the geometric lathe, another will engrave the vignette, another the background tints, and another the lettering. These parts are engraved on separate small plates of soft steel which are afterwards hardened. Each is then pressed into soft steel rolls which are in turn hardened and used to press the design in the proper position on the plate that is to hold the complete design. After all these details have been transferred from the rolls the plate has to be completed by hand engraving. When finished it is hardened and the whole design pressed into a steel roll. This also is hardened and is used for pressing the complete note design as many times into a large steel plate as there are notes to be printed on a sheet. This plate forms the printing surface, which is curved to fit the cylinders of the printing machine. Of course, it has likewise to be hardened to withstand the wear and tear of printing. The hardening process is a delicate operation requiring special care and much knowledge of the properties of steel.

Naturally the work of preparing the plates is very costly, but when this cost is spread over the many thousands or perhaps millions of notes printed the expense in relation to each note is fractional. A statement has been made that it costs 1.3 cents each to make the American currency notes, elaborate as they are, and presumably this covers the cost of paper, engraving, printing and all incidental work. It is a high figure in the opinion of English firms.

The engraving and printing of bonds with coupons is done in much the same way, except that the coupons have to be separately numbered by another operation with a special machine. The bonds are never perforated, the invariable custom being to cut off the coupons with scissors.

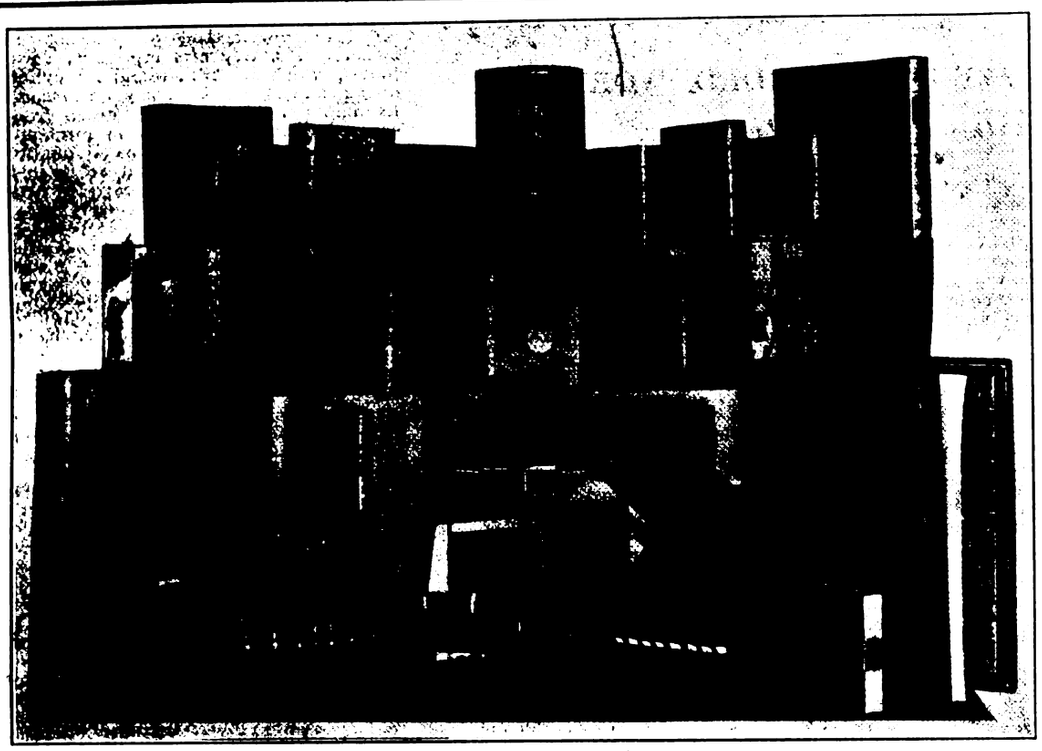
Bank-note printing firms have to maintain almost as large an organisation for the counting, checking, and controlling of their output as for the actual printing. Every sheet of paper given out has to be accounted for, and every night all sheets, whether unprinted or partly printed, have to be put into secure storerooms; every piece is checked in and checked out again in the morning.

Equal care is taken in the preservation of the plates, for which special strong-rooms are provided; and the most careful checking takes place in handing them out and in accounting for their return. This control at all stages of the work seems a most complex business to the outsider, yet it operates like clockwork with hardly ever a mistake of any importance and never a sheet unaccounted for.

Cheque Printing.

Cheque printing is done in a different and less elaborate way. The designs are engraved on copper, and though some are printed direct from the plate the tendency in these days is rather to use the original as a master plate and make transfers from it for printing on the lithographic offset press, which has now almost entirely superseded the old method of printing from stone. The transfers are made on zinc plates, which are bent round the cylinders of the rotary presses. The plate first makes its impression, or offset, on a rubber-covered cylinder, and this in turn makes the print on the paper. A better quality of work is thus obtained, and at a higher speed. The cheques are invariably printed two, three, or four up, and usually there are at least two printings, as the ground tint, or "micro" lettering in the background, is done by a separate printing in a special ink. As this ink is sensitive to water it cannot be printed lithographically owing to the damping of the printing plate. This part of the printing is therefore often done on letterpress machines from electrotype blocks, the print then being dry. Latterly these fugitive ink printings, which are much relied on for security, have been done by some firms on the machines used for photogravure printing, a softer and better effect being thus obtained.

Perhaps the most interesting of all the bank-notes of the world is the Bank of England note in its various denominations, though it is the plainest in its engraving features and in its printing. The whole of the printing for the Bank, including the notes, is carried out at St. Luke's Printing Works which belong to the Bank. This building was formerly known as St. Luke's Hospital, and has been converted into a model factory. The bank-notes are printed two at a time on hand-made paper, which is manufactured for the Bank by Messrs. Portals, Limited, at Laverstoke Paper Mills. Every sheet of bank-note paper is weighed separately, and its weight must be correct within a very small margin. The notes are printed on power-driven machines, which were specially constructed for this work, each machine turning out over 24,000 notes per day, printed and numbered. The notes are not re-issued by the Bank; they are kept for a considerable period and finally destroyed. The work carried out at St. Luke's Printing Works also includes the production of documents of value and general stationery required for the Bank's business: in addition, the Bank of England prints rupee notes for the Indian Government, bank-notes for So. Africa, and, until recently, the British postal orders. The warrants and income-tax vouchers for dividends on Government Loans and other stocks managed by the Bank of England are printed on the Bank's own specially constructed machines, each machine being capable of printing nearly 2,000 dividend warrants per hour, each warrant being printed with the different names and amounts. These warrants and income-tax vouchers run into over five millions per annum, and the addresses of some four million envelopes for the transmission of the warrants by post are also printed at high speed on special machines. The type for this work is turned out on a fleet of linotype machines specially built for the purpose, and amounts to hundreds of tons of metal. All changes of stock have to be recorded at St. Luke's Works in metal to agree with the Bank's books—a work that is going on every day throughout the year.



Treasury Notes.

Messrs. Waterlow and Sons' factory, which is specially devoted to the printing of the Treasury notes, is a wonderful organisation. The issue of notes averages about 10,000,000 per week, and since the firm must be always ahead of the possible demand the actual number of notes in stock or in process of printing must necessarily be much larger. Every note must be separately examined, counted, checked, and counter-checked—all faulty ones thrown out and replaced by perfect notes. Every sheet of paper handed out, every sheet printed, and every sheet spoilt—all have to be accounted for. If a sheet were found missing the firm would have to pay the face value of the notes printed on it. The final checking is by a special staff provided by the Inland Revenue authorities. Every night the whole of the unprinted or partly printed paper is placed under lock and key in compartments furnished with burglar alarms, and all finished notes are placed in a strong-room, built as perfectly as any banker's strong-room. The machines are locked and the works are patrolled throughout the night by a special staff of guards.

Lithographic Trades Review.

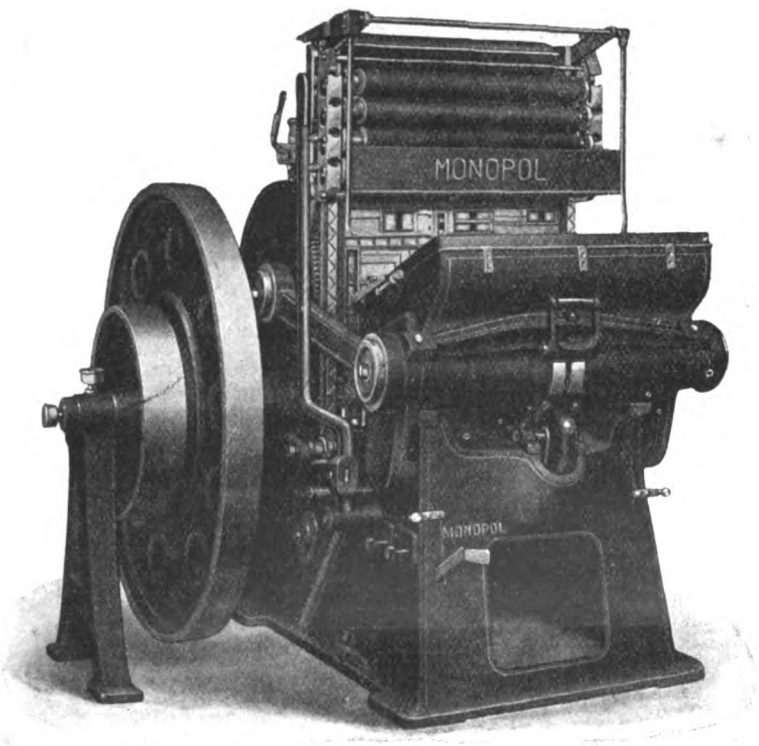
NOTES AND NEWS.

MANY a lithographer must be feeling that his pride of craft has been considerably increased by what he saw and heard at the Printing Exhibition. As we point out on another page, the outstanding fact that emerges from the Exhibition is that the trend of the tide in printing seems very definitely to be away from letterpress methods towards those of lithography—a fact which, whilst it gives letterpress printers cause for thought and effort, serves to encourage all engaged in lithographic printing or in the providing of machinery or supplies necessary to or auxiliary to the litho branch of the trade.

AT least one member of the non-technical Press fell into the error of stating that photo-typesetting was represented at the Printing Exhibition. The reference was, presumably, to the Typary machine. It would be well for the trade to guard against the confusion of thought which is bound to ensue if the term "photo-typesetting" is applied to anything but the actual setting together of type characters by means of the camera. The Typary machine has a different function, namely to produce printed matter in the form of ink on paper, and into this part of the Typary-Typon process the camera does not enter.

SOME visitors to the Exhibition would, no doubt, be looking for the August-Hunter photo-typesetting machine, of the presence of which some expectations had been entertained. We gather, on inquiry, that the demonstrating of the machine at the Agricultural Hall had been seriously anticipated, but that the difficulties—pa ticularly the financial problems—with which it is customary for investors to be faced, prevented so early a public showing of the machine. We have, however, been favoured with a private demonstration of this most interesting invention, and we expect to see it ready for introduction to the market in the very near future.

THE sponsors of the August-Hunter photo-typesetting machine (The A.H. Development Syndicate, of Iliffe-road, Walworth), have put remarkable ingenuity and high-class engineering skill into the work of perfecting the apparatus, and the result is, to say the least, extremely interesting. Before forming a judgment upon such an invention, the practical man will of course, ask, not "Does it look a wonderful machine?" but "What will it do?" Frankly, we have not yet seen the machine produce a film of typographic matter; but there have been understandable and, we judge, easily surmountable hindrances in the way of the production of the finished article, which should now be quickly forthcoming. The weighty question of justification and the even knottier problem of corrections have received very careful consideration. In regard to corrections it must be remembered that the inventors expect the machine to work with the speed of the Linotype, so that even the re-typing of a whole paragraph, to facilitate film-patching, would not be a very serious matter.



ONLY practical demonstration will prove how far the machine will fulfill the very high hopes it arouses, but the inquirer cannot but be impressed with the very workmanlike way in which the inventors have aimed at giving their apparatus qualities which seem almost human. In the production of typographic film direct from keyboard, this compact machine is designed, by virtue of its mechanical, electrical and optical components, to perform operations involving quite intricate calculation and apparent exercise of judgment. The complete success of this ambitious invention would be a most important event in the history of lithographic printing.

ANOTHER item the absence of which we noted at the Exhibition was the "dry litho" method of Mr. W. P. Price. In order to keep our readers and ourselves in touch with this interesting development, we found time the other day to pay an unannounced visit to Mr. Price at his new premises at Butler street, Spitalfields. Far from learning that his invention had been laid aside, we found him busy turning out ordinary commercial printing—letter heads to be precise—on a L. & M. double demy rotary offset, *without* damping apparatus. We were told that, had we called a day earlier, we should have seen dry litho printing being done on a Wharfedale. Roller trouble has delayed the successful application of the method to letterpress machinery—dampness in the ink having, we gather, detrimentally affected the ordinary rollers. A special roller composition appears, however, to have been found that is going to make the method practicable on any letterpress machine.

BUSINESS generally in the lithographic section of the industry at the present time is regarded as satisfactory, and, compared with twelve months ago, shows a considerable improvement. In lithographic circles it is hoped that the Exhibition, with its very pronounced lithographic bearing, will have the effect of still further stimulating business in this section of the printing industry.

THE Drawing Office Materials Manufacturers' and Dealers' Association have lost a highly-respected member by the death of Mr. D. Craig Simpson, director in Glasgow of Norton and Gregory, Ltd. Mr. Simpson's premature death followed upon an attack of sleepy sickness. The deceased gentleman was well known in trade circles.

JOSEPH GOODMAN
SUPERB LITHOGRAPHIC OFFSET
AND
LETTERPRESS PRINTING INKS.
Printing Machinery and Requisites of every description.
12, CRANE COURT, FLEET ST.,
'Phone: CENTRAL 8881. LONDON, E.C.4.
Sole Agent for "LITIDROS."

The "MONOPOL" Art Platen.

- Specially built to produce the very best Heavy Tint and Register Colour Work at a High Speed.
- Embodies many patented improvements.
- The Roller Carriage has a special spurwheel drive, which imparts it a perfectly smooth and noiseless motion. This important improvement does away with the cam action in the main gear-wheel, which is subject to great wear and necessitates frequent costly repairs.
- Throw-off Inking and Distributing Rollers, from each other and from the Inking Cylinder, by a single lever movement.
- Separate Drive for Inking Rollers, permitting inking-up without running the machine, or enabling the platen to be worked for embossing, etc., without the inking rollers moving.
- The forme is supplied with fresh ink both during the downward and upward movement of the roller carriage.
- Automatic Hand Safety Guard, which can also be used as a throw off. Only a gentle touch of the guard is required to stop the machine.

Built in 3 sizes:
9½" x 13," 13⅛" x 17¾." and 16" x 21½."

Enquire also for our "Auto-Monopol" and "Tip-Top" Platens.

RETOUCHING FOR

Offset Lithography in Colours.

By Ellis Bassist.

It has long been the dream of the colour process worker, and, in fact, all interested in colour reproduction, either from the technical or business standpoint, to develop some method of making colour extraction negatives which will eliminate the costly handwork necessary in making colour-plate corrections—writes Ellis Bassist in the "Inland Printer" (Chicago). It is well known that colour process blocks are costly because the photographic colour-separation negatives are far from being correct in their tone values. It takes many hours of painstaking and arduous labour, as well as a thorough knowledge of colour-tone values, to make up for the incorrect rendering of such values.

In the case of four-colour work, the operator overcomes this by minus etching; that is, the negatives are made purposely stronger in all details in order to allow the etcher to make all necessary reductions.

The method of minus etching, as it is practised to-day, is a highly developed art, and one cannot help marvelling at and admiring the skill of the workers who produce such magnificent colour combinations, and so closely reproduce the original.

Sometimes colour-separation negatives are so poorly separated that, to the ordinary eye, they do not represent anything but four different negatives made from the same subject. This is especially true in cases of reproduction of dark-hued oil paintings. Water-colours or pastels, on the other hand, usually give fair results and clean-cut separations. Therefore, if it were possible for the colour reproducer to control the craving of the artist for fantastic effects, it would be quite possible not only to economise in colour reproduction work, but also to save a considerable amount of time. This, however, is very seldom within the jurisdiction of the house that actually has the work to turn out.

And so, the operator is handicapped at the very start of his work, for at the first step—the separation negatives—he can hope to obtain, at the very best, only about fifty per cent. near correctness. Now if we consider this for a moment, we cannot help but realise that the structure of the foundation is wrong—that this very fact causes most of the grief which, like a red tape, runs through the entire colour reproduction industry. No one can say in every instance that "all is well."

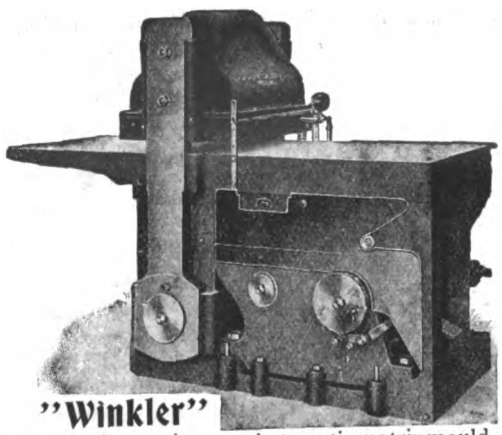
The photographer will give his best attention to his colour-separation negatives as the foundation for his work. That is true, but, we must admit, and do, that with the present colour-sensitive negatives and with the best suitable filters, we are still far removed from obtaining the desired results.

Even with the best talent among the workers and with the closest attention to all details, the means at our disposal are lacking, and it is practically impossible to start with a good foundation. In the opinion of eminent colour scientists, the realisation of the dream to make technically correct colour-separation negatives is impossible with our present means of utilising the solar system.

The improvements for colour-correct negatives which have been made, and are being made, are mostly of a mechanical nature, and are too varied to go into in more detail here, except to mention the Gamble masking or shading methods, and also the more recent invention of Arthur Hatt, which is also based on masking out or shading.

While these methods are improvements which will help and also reduce labour, yet they do not entirely eliminate the hand work. As previously mentioned, the photo-engraver has an admirable method of correcting the colour values on the copper plate by minus etching. This method allows the operator to have the work always under control, and he can stop the actions of the chemicals at will. He can reduce his copper plate locally and take a proof from his work, and continue to make further corrections without any real technical difficulties.

Mechanical colour correction is also possible for the offset colour reproduction work in a large measure, but it must be admitted that the difficulties encountered are far greater in many respects. There are other features, however, in colour offset work, as well as possibilities that make it more flexible. One drawback in colour offset as against colour block lies in the matter of tone correction. In colour offset it means the correcting of the positive and the remaking of the negative. This is the only way to properly correct the tone values. In colour-block making it is a matter of simply further re-etching the copper surface, which will serve the same purpose.



Before the invention and introduction of the various "step-and-repeat" or photo-composing machines, the possibilities of colour corrections were many. the main object being to make a good original, either on stone or metal, and from this pull the impression to be used for re-transfer. Here the litho artist had at his command the entire range of all the old methods. He could use his previous training, and work with his accustomed tools.

The introduction of the photo-transferring devices presented a new order of things, and these older methods had to be changed. The object is still the same—a good original—but it has to be finished on a transparent material—glass. Every print from this original has to be a finished entity, to which nothing can be added or taken away. The parallel here is exactly the same as in the case of the type printer and his electrotypes; that is, electros made from the original half-tone cuts which require no more hand tooling, etc. And this is the point in the case of photo-transferring. If we have to print up forty prints on the metal plate, each one must be finished with absolute accuracy down to the last detail. To do this with the least expense and in a positive manner is the earnest aim of every one interested in this rapidly progressing offset field.

It is a curious coincidence that in almost all the important achievements in the litho art it has been found necessary to go back to some of the old methods previously used, and to apply them in some measure to present-day practices. It is common knowledge to-day that the forerunner of the offset press was the tin or metal decorating press, and that many of the methods employed in the preparation of the plate for metal printing are now being used in the offset field.

The making of colour plates for the photo-transferring method was one of the very first used in the art. I have in my possession a specimen of printing from the year 1878, made by the same method under consideration in this article, and fully described by Dr. Albert, of Vienna. It is, in a general way, the same as our present method of indirect re-touching, the difference being that the final printing plates were made on gelatine with the collotype process.

The present method, while essentially the same as the old method, is as follows:—First, a set of continuous half-tone colour-separation negatives are made from a coloured original. Then from this a set of positives are made on fine grained glass by the wet plate process. These are then re-touched and again re-photographed through the screen in the camera. This re-touching is the corresponding operation with the re-touching of the colour photo-engraving on the copper.

"Winkler"

stereotyping equipment. Automatic matrix moulding and drying press for steam heating, dry or wet flong, hot or cold, complete with boiler combined with melting pot. Produces Halftone matrices of finest screen so accurate, that Stereos cast therefrom are facsimile to originals. The whole outfit is in the very best condition and only used a few times.

Further informations directly from the seller Centraltryckeriet, Ltd., Stockholm, Sweden.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

The Coming of the Offset Period.

THE Printing Exhibition at the Agricultural Hall is closed, and visitors to the show have now time to think over what they saw there and estimate how many improvements have been made in the various machines and appliances since the last Exhibition four years ago. Although there were no new inventions of a revolutionary character, the machinery on the whole showed a general improvement in detail and construction that indicated a desire on the part of the manufacturers to provide the printer with the best possible appliances for the different sections of his work. Perhaps the most striking feature of the show was the rapid progress that has been made in machinery for offset printing, and the number of machines for that process that were on view. In previous exhibitions offset machines were shown only by a few firms that specialised in their construction, but this year nearly every firm of repute had machines on show, including Marinoni-Voirin, Linotype and Machinery, Victory-Kidder, Lanston Monotype, Mann and Co., Furnival's, Waite and Saville, and other firms. This indicates that the offset method of printing is coming into its own, and there is no doubt that in the future it will be a formidable competitor to letterpress. It is for the up-to-date printer to see that he is not left behind by adhering too rigidly to the older processes.

Subsidiary Developments.

THE coming of the offset method of printing has not only caused the development of machines for the purpose, but of other appliances that are intended for the facilitation of the process. Thus we have the "Lithotex" machine, which, as shown in its newest form at the Exhibition, greatly facilitates the duplication of designs or matter, so that many subjects may be placed on a large plate and thereby enable an economy to be effected in the actual printing, while the precision with which this appliance does its work greatly aids the getting of exact register in the final printing; in fact, remarkable developments may be expected from the conjunction of offset and "Lithotex." The application of the offset machine to the printing of text matter, and even of newspapers, commonly needs the aid of the compositor to set up the type from which the transfers are made, but genius and brains are busy designing and constructing appliances that will dispense with the necessity for type-setting, and that will render the whole process of printing reading matter an entirely lithographic one. One of these, the "Typary," was on view, and caused a deal of interest to printers, the stall at which it was shown having a constant crowd of visitors. This machine, as we have mentioned in a previous issue, works from type bars, and gives an impression on paper, to be afterwards photographed and transferred to the metal or stone litho surface. But there are other machines in actual existence that dispense with type altogether and use entirely photographic means of producing the printing surface. One felt a little disappointed that some of these photo type-setting machines were not shown at the Exhibition, as so much has been heard lately of their capacities, but that they are very real machines the writer can testify, having seen several of them, and it is merely a matter of time before they doubtless, will prove to be in competition with our present type-setting methods. Perhaps by the time the next Exhibition is held the inventors of these machines will have so perfected them that they will be able to show them with confidence as really practical appliances.

The Question of Labour.

IN connection with the development of the offset process, a further thought comes to us. As the methods used are purely lithographic, and as lithography requires skilled and trained workmen, where are the workers to come from? Up till quite recently lithography was a somewhat neglected branch of the trade, if we except the houses that produced pictorial work in colour, and the number of lithographers is comparatively small as compared with their brethren in the letterpress section of the trade. In these conditions there is bound to be a scarcity of labour as offset develops, and those who take an interest in this matter should see to it that intelligent lads are taught the business, for with the advent, or rather the revival, of lithographic methods, there is sure to come also a demand for skilled workers in the process.

Book Paper Problem.

THE interesting if curious suggestion is made that books of permanent importance might be printed in two editions, apparently simultaneously. One might be printed on paper of a lower grade for general sale, while for the second a good rag stock is indicated. In bringing the matter to the attention of the public in a book entitled "Paper or Sawdust—a Plea for Good Paper for Good Books," Mr. H. M. Leydenberg, chief reference librarian of the New York Public Library, urges that if books are to endure they should be printed on paper that will last, paper of a lower grade being reserved for ephemeral publications. It is suggested that printer and publisher should consider the sort of use a book will receive when they select the kind of paper to be used. While the printer must prove to the publisher that really good work deserves good paper, the papermaker is enjoined to cultivate sufficient pride to develop a stock that can be sold within the bounds of reason. Then the other party, the buying public, is expected to support the printers and the publishers in the scheme to meet a practical need. Whether it would be possible to secure support for a double printing, with the additional expense, is a problem which, it is intimated, will have to be worked out on practical lines as an experiment.

Trade Notes.

Arrangements for the forthcoming issue by the Allied Northern Newspapers are well advanced. The issue, it will be recalled, is for £2,000,000, and it will take the form of first mortgage debenture stock. Underwriting for this amount is expected to take place to-day (Thursday).

Following an appeal by the Chief Constable, the Divisional Court last week ordered Southend Justices to convict on six summonses against Walter Knight, former manager of the *Southend Times*, in connection with that newspaper's shopping scheme last December, deemed to be a lottery. Fines of 10s. were imposed on each of the six summonses which the Bench previously had dismissed.

The editorial and printing departments of the *British Medical Journal* have removed from 429, Strand, to the Association's headquarters in Bloomsbury.

Messrs. Constable and Co., of Orange-street, London, W.C.2, have arranged to take over the publication of the *Hibbert Journal* in October next. This periodical has hitherto been published by Messrs. Williams and Norgate.

The Egyptian State Railways, Telegraphs, and Telephones Administration is revising its lists of manufacturers of certain important supplies, including printing machines. Application to the general manager at Cairo before October 15th, quoting reference No. 129.47/7.

The death has occurred in London of Mr. Joshua Duckworth, of Colne and Rimington. Mr. Duckworth was 69 years of age, and was a wholesale printer and stationer, carrying on business at Colne. He was an ex president of the local Master Printers' Association.

Mr. Hebber Mardon, of Cliffden, Teignmouth, for many years head of the Bristol printing house of Mardon, Son and Hall, now a branch of the Imperial Tobacco Co., who died on April 1st, aged 85, left a fortune of £399,518, with net personalty £384,276.

Mr. James Mackay, 72, of Herne Bay, Kent, and of Messrs. W. and J. Mackay and Co., Ltd., printers and publishers, Chatham, left £4,256, net personalty £4,228.

The annual general meeting of the London Master Printers' Association will be held at Stationers' Hall, on Friday, June 5th, at 12 noon.

The June meeting of the South-West London Master Printers' Association is being held on Thursday this week at Messrs. Arding and Hobbs Restaurant. The president (Mr. R. B. Simnett) is to give a "surprise" chat, which will doubtless contain much useful information for the members.

Interesting exhibits in connection with the printing, bookbinding and allied crafts are included in the annual exhibition of the Central School of Arts and Crafts, Southampton row, W.C.1. The exhibition opened yesterday (Wednesday) and will continue till June 27th—hours, 10 a.m. to 8 p.m.; Saturday 10 to 12.

The Leeds and District Printing and Kindred Trades Cricket League has issued a handsome souvenir Year Book in honour of its coming-of-age, the League having been established in the season of 1905. Mr. Victor H. Watson is the president, and Mr. A. Senior secretary. Next year the League will comprise a dozen clubs.

Printers' Sports Day. — The annual popular gathering of the Printing and Allied Trades Charity Sports is to be held on Saturday at the Herne-hill Track. An excellent programme of open and trade events has been arranged, and the prizes are to be distributed by Brig.-General W. F. Mildren, C.B., C.M.G., D.S.O., the president. The proceedings commence at 1.30 p.m.

The Rome Society of Newspaper Editors has decided to increase the price of newspapers by five centesimi, fixing the price at 25 centesimi (about ½d.) as from June 1st.

The "Rules for Compositors and Readers at the University Press, Oxford"—that very useful little work of reference published by Humphrey Milford, of Oxford, and of Amen House, London, E.C.—has just come out again in a new edition, which contains a number of alterations and additions, a notable insertion being eight pages of medical terms. Neatly produced in stiff paper wrapper, the booklet is priced at 2s. net.

Personal.

On retiring from the managing directorship of the *Newcastle Chronicle*, Ltd., which recently changed hands, Col. Sir Joseph Reed was presented by the staff and employees with a beautifully illuminated address.

The Peckham Conservatives have adopted Mr. John McCulloch, newspaper proprietor, of Dulwich, as their prospective candidate.

Mr. J. A. Eccles, the retiring president of the Halifax (Yorkshire) branch of the Typographical Association, has been presented with a framed emblem of the Association in appreciation of his services as president and as a member of the committee for nearly 30 years.

Councillor E. Grimsley, of Leicester, has been elected president of the local branch of the Typographical Association for the tenth year in succession. He has also been elected president of the Leicester Trades Council.

Mr. J. Ripley, of the composing-room staff of the *Liverpool Daily Post*, has been presented with a gold watch, and Mr. J. Makepeace, also of that staff, with a timepiece, by the members of the "chapel" on their retirement to take up pensions provided by the proprietors.

Mr. W. R. Cummins, a popular member of the North London Master Printers' Association, and head of the firm of W. R. Cummins, Ltd., Muswell-hill, N., was the subject of last week's "Who's Who," an illustrated feature in *Popular Gardening*.

Mr. Frederic W. Goudy, designer of type faces, and art director of the Lanston Monotype Machine Co., has been appointed a delegate to visit Paris with the Hoover Commission and inspect and report on the International Exposition of Modern Decorative and Industrial Art, which is to be held there this year. Mr. Goudy expects to leave for France early in June, and will be accompanied by Mrs. Goudy.

Mr. D. Clapperton, controller of the Wolvercote Paper Mills, and Mr. F. J. Hall, controller of the Oxford University Press, have been elected vice-presidents of the Oxford and District Private Fire Brigades' Association. Mr. F. Clifford and Mr. A. E. Hutt will represent the Press and the Mills respectively on the committee.

Stationers' Social Society.—Members who desire to play in the Bowls competition at Malden on Tuesday, June 9th, are asked to send in their entry forms to Mr. A. E. Mist at 189, Upper Thames-street. The competition is arranged on handicap lines to play off for the Woollacott Cup. Great interest has been taken in this competition in previous years, and it is hoped that the entries for June 9th will be at least equal to those of a year ago. Malden is within easy reach of London from Waterloo Station, electric trains running every ten minutes.

Enlarged Size of Postcards.

Further Trade Opposition.

At the annual meeting of the Stationers' Association, held at Stationers' Hall last week, when there was a large gathering of retail stationers representing all parts of the United Kingdom, an important matter discussed was the enlargement of the permissible size of the postcard.

The subject was introduced by Sir Adolph Tuck, who after referring to the fact that the decision reached by the Post Office authorities appeared to have been come to without consultation with any section of the trade, proceeded to say that it behoved producers, wholesalers and retailers of picture postcards to safeguard their own interests, and there certainly could be no two opinions that the issue of a larger size picture postcard than the one at present in use was dead against every interest connected with the picture postcard trade from publisher to retailer. Sir Adolph went on the state the case against the larger size, and indicated the strong opposition shown by the picture postcard publishers of the United Kingdom as well as by wholesalers and retailers on the Continent, Italy, Germany, France, etc. As to the question, "What would happen if some individual publisher went against the resolution, and produced this larger size postcard?" Sir Adolph recalled the question asked in respect of the first railway train, presumably with the idea of flooring the inventor: "What would happen if a cow strayed on the line, and refused to budge and give way to an approaching train?" The reply of George Stephenson settled the point: "What would happen is this," he said, "It would be all the waur for the coo." In other words, it would be the cow that would come to grief and not the train; and, added Sir Adolph, I cannot help thinking that the publisher who, in defiance of common sense and the expressed unanimous opinion of the trade, insisted upon producing a postcard of increased dimensions would find the door shut upon him and would be left with the greater part of his stock. It would be all the "waur" for the obstinate publisher. It is the publisher who would come to grief, and not the public or the trade.

On the motion of Sir Adolph Tuck, seconded by Mr. Sandle (Sandle Bros.), and supported by Mr. Percy Barringer (president of the Association), the meeting unanimously passed the following resolution: "That this annual meeting of members of the Stationers' Association of the United Kingdom is of the opinion that the present size picture postcard, 5⅜ by 3½ inches, is the most practical for both the trade and the public, and that the larger size postcard which is permitted by the Postmaster-General as from October 1st be not adopted by either the publishing, the wholesale or the retail trade."

"Royal Charter Bond" is brought agreeably to our notice by the receipt of a booklet of specimen sheets sent us by Messrs. Allardyce and Co., Ltd., paper merchants, of 85, Southwark-street, S.E.1. This attractive bond paper, of which the price, we understand, compares very favourably with many higher priced bonds on the market, is exemplified in several shades and substances.

DIVIDENDS AND REPORTS.

LANSTON MONOTYPE CORPORATION.—Directors recommend an interim dividend of 2 per cent. for six months ended March 31st last. Transfer books will be closed on June 5th and dividend warrants posted on June 11th. (Last year dividend same.)

ASSOCIATED NEWSPAPERS.—The report for the year ended March 31st last shows that the profit, after allowing for depreciation and providing for contingencies, amounted to £917,046 (against £910,408 in the previous year). The usual dividends have been paid on the preference and ordinary shares, and 40 per cent. (unchanged) on the deferred shares. There is allocated £100,000 (unchanged) to reserve against investments, while the pension fund receives £10,000 (against £20,000); the reserve receives £100,000 (against nil), leaving £215,947 to be carried forward.

STAR PAPER MILL CO., LTD.—An interim dividend is announced at the rate of 5 per cent. per annum.

WIGGINS, TEAPE AND CO. (1919), LTD.—For the year 1924 Wiggins, Teape and Co. (1919) secured a profit of £81,951, while £63,843 was brought forward. After providing for debenture interest and one half-year's dividend on the preference shares, the available balance is £95,448. The directors propose to pay the preference dividend for the second half of the year, to transfer £15,000 to depreciation reserve, and to carry forward £55,198.

NEW COMPANIES.

THE GRAPHIC AND BYSTANDER, LTD.—Capital £100,000, in £1 shares, to adopt an agreement with Graphic Publications, Ltd., and to carry on the business of printers, publishers, advertising agents, stationers, proprietors of newspapers, magazines, books and periodicals, photographic printers, photolithographers, engravers, photographers, etc. Private company. Directors: Sir Edward M. Iliffe, T. W. Fletcher, W. C. Iliffe, R. C. de Morgan, W. Will and G. Sparkes. Solicitors: Laurence, Webster, Messer and Nicholls, 14, Old Jewry-chambers, E.C.2.

J. AND E. W. JACKSON, LTD.—Capital £5,000, in £1 shares, to acquire (1) the business of a printer and stationer carried on by J. Hyman as "J. Hyman and Co.," at 38, New Brown-street, Manchester, and formerly carried on by H. Jackson as "J. and E. W. Jackson," at 60-62, Corporation-street, in the same city, and (2) the business of a printer and wholesale stationer carried on by J. Hyman as "J. Hyman and Co., at 38, New Brown-street. Private company. Subscribers: M. J. Hyman and H. Hyman. Registered office: 60, Corporation-street, Manchester.

RACING SPECIALIST, LTD.—Capital £20,000, in £1 shares, to adopt an agreement with J. C. Boys and H. Boys, and to develop and turn to account the business of the *Racing Specialist*, carried on by them at Danes Inn House, 265, Strand, W.C.2. Private company. First directors: J. C. Boys and H. Boys. Solicitors: Guscotte, Wadham, Tickell and Co., 19, Essex-street, W.C.

BLUE MAGAZINE CO., LTD.—Capital £1,500, in £1 shares, to acquire the business of the *Blue Magazine* now carried on at 3, Lancaster-place, Wellington-street, Strand, W.C., and to carry on the business of proprietors and publishers of newspapers, journals, magazines, books and other literary works, etc. Private company. Subscribers: F. J. Sellicks and F. A. M. Webster. Solicitor: W. L. Jones, 1, Harper-street, Bedford.

YACHT SALES AND CHARTERS, LTD.—Capital £100, in £1 shares; to carry on the business of agents, valuers, brokers, etc., of yachts and vessels of all kinds, to establish, print and publish a periodical register of yachts and other vessels for sale and charter, etc. Private company. Directors: G. H. Pinckard, J.P., and S. Austin. Registered office: 9, King-street, Covent Garden, W.C.2.

J. M. GREY AND CO., LTD.—Capital £2,500, in 1,175 10 per cent. preference shares of £1 and 26,500 deferred ordinary shares of 1s.; to adopt an agreement with J. M. Grey and to carry on the business of publishers, publicity and advertising agents, contractors and consultants, etc. Private company. Directors: J. M. Grey, W. A. McAlonan and W. B. Cooper. Registered office: Stafford House, Norfolk-street, Strand, W.C.2.

P. F. WARNER, LTD.—Capital £4,000, in £1 shares; agents for and dealers in musical instruments, music publishers, printers, lithographers, engravers and copiers of music, etc. Private company. Directors: P. J. F. Warner and H. Turnbull. Registered office: 101, London-road, Leicester.

CECIL LENNOX, LTD.—Capital £10,000, in £1 shares (5,000 6 per cent. preference); to adopt an agreement with R. L. Tabbush, and to carry on the business of music publishers as formerly carried on by him at 134, Charing Cross-road, W.C., as "Cecil Lennox and Co." Private company. Subscribers: R. L. Tabbush and G. A. Warley. Registered office: 134, Charing Cross road, W.C.2.

ARDWICK PAINT MANUFACTURING CO., LTD.—Capital £1,000, in £1 shares (400 6 per cent. pref. and 600 ord.); to acquire the business of a manufacturer of and dealer in paints and varnishes carried on by M. H. Taylor, at 61, Pin Mill Brow, Ardwick, Manchester, as the "Ardwick Paint Co." and to carry on the same and the business of manufacturers of and dealers in papers of all kinds and articles made from paper and pulp and materials used in the manufacture and treatment of paper including wall and ceiling papers, etc. Private company. Subscribers: M. H. Taylor and H. Jones. Solicitors: 55-6, Brown's Buildings Exchange, Liverpool.

WORKERS' NORTHERN PUBLISHING CO., LTD.—Capital £500, in £1 shares; proprietors and publishers of newspapers, journals, magazines, books, pamphlets and other literary works and undertakings in the interests and furtherance of the objects of the Independent Labour Party and other kindred and allied parties all such publications before publication to have the approval of the Executive Committee of the No. 9 Divisional Council of the Independent Labour Party. Private company. Subscribers: J. W. Moor and J. T. Abbott. First directors: J. W. Moor, J. T. Abbott, E. Sandham, H. Ponsonby and T. H. Millard. Solicitor: F. E. Monks, 41, Princess-avenue, Manchester.

LANCASTER PUBLISHING AGENCY, LTD.—Capital £100, in £1 shares; general publishers, journal and publication proprietors, booksellers, newsagents, advertising agents and contractors, etc. Private company. Directors: Mrs. M. K. Quin and Miss M. M. K. Quin. Solicitor: G. F. Haworth, 19, Chapel-walk, Manchester.

GODDARD WATTS, LTD.—Capital £1,000, in £1 shares (400 6 per cent. cum. pref. and 600 ord.); advertising contractors and agents, etc. Private company. Directors: G. G. Watts, A. H. Archibald and W. G. Watts. Registered office: 3, Broadway, Ludgate-hill, E.C.4.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HART AND SON, LTD. (printers, etc., Kilburn).—Particulars filed of £1,100, debentures authorised May 15th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

JAMES HARRISON AND CO., LTD. (engineers in relation to cardboard box and printing machinery, etc.).—Mortgage dated May 19th, 1925, to secure £1,363, charged on certain land, buildings, plant, etc., as Hallamfield, Guiseley, Yorkshire. Holder: C. R. Marshall, Brantwood House, Guiseley.

WILLIAMS AND NORGATE, LTD. (publishers, etc., London).—Particulars filed of £3,500 debentures authorised May 14th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

ENOCH AND SONS, LTD. (music publishers, etc.).—Further charge and mortgage dated May 20th, 1925 (supplemental to mortgage dated April 17th, 1924), to secure £15,000 including £11,000 secured by principal mortgage, charged on 58, Great Marlborough-street, W., and certain copyrights, goodwill and policies of assurance. Holders: Yorkshire Insurance Co., Ltd., St. Helens-square, York.

G. W. DRAY AND SON, LTD. (papermakers and dealers, stationers, etc.).—Satisfaction in full on June 15th, 1916, of mortgage or charge dated April 3rd, 1914, securing all moneys due or to become due. (Notice filed May 20th, 1925).

EDWARD J. WOOD AND CO. (PRINTERS), LTD.—Charge created by the receiver on the company's assets, present and future, dated May 1st, 1925, to secure £150. Holders: The Westminster Bank, Ltd.

Exhibition Notes.

THE London Master Printers' Association paid an official visit to the Exhibition on Wednesday, May 27th. A considerable number of members took advantage of the occasion to inspect the exhibits, and particular attention was paid to specimens of printing which had been sent in by the district associations in connection with the Inter-District Competition, for which the West and North-West London Association were awarded a silver cup. The trophy itself and a neat little replica were on view during the Exhibition. At mid-day Mr. W. Howard Hazell, president of the Federation and of the Exhibition, presided over a luncheon to the members of the council and the officers of the district associations. A fuller report of the proceedings is unavoidably held over to next week.

BY invitation of the president, the advisory council and the organising manager, the Jobbing Guilds' Re-union took place on Saturday in the Grand Saloon, Agricultural Hall, under the chairmanship of Mr. F. W. Bridges. We hope to publish a report of the proceedings in next week's issue.

A STRONG but silent protest against a too prevalent present-day tendency to exalt speed at the expense of beauty of craftsmanship was provided at the Exhibition by Mr. Geo. W. Jones' fine showing of early printed books. Many a printer must have found, as we did on several occasions, that there was refreshment and inspiration to be had by turning from the roar of the Main Hall to the comparative quiet of the room in which were set out a selection of typographical treasures from Mr. Jones' wonderful library, including such rareties as a page of the 42-line Bible printed by Gutenberg, Fust, and Scheffer at Mainz in about 1455; the "Appian" manuscript, written in 1450 for Cardinal Della Rovere, afterwards Pope Julius II; the fine Pliny, printed by Nicolas Jenson, at Venice, in 1476, and so on. These classical examples of book-making artistry brought a cooling breath from the past into the fevered world of the present, and the thanks of the trade are due therefor to the eminent craftsman whose sign is the Dolphin.

CONSIDERABLE interest was taken in the file of the *Family Herald* at the stand of the Printers' Pension Corporation in the Gallery. This old newspaper was printed in 1842 from type set by Young's Patent Composing machine, an apparatus which is said to be the first typesetting machine. Another interesting document on this stand was the first election paper for pensioners to the Wood Green home, dated seventy years ago. The treasurer then was Mr. W. Clowes, a member of the same family as the present occupier of that post, Mr. W. A. Clowes.

FINE work was done by the P.M.A., at whose stand over fifty cases were attended during the time the Exhibition was running. Quite a number of new members were enrolled, and the *Gadget*, the Association's clever and humorous publication, proved a popular feature.

EXCELLENT service has been rendered during the course of the Exhibition by the band of the London Society of Compositors. Each afternoon an orchestra gave acceptable service, whilst a full military band performed each evening to large and appreciative audiences. Under the able conductorship of Mr. William Avery, the band has now developed into a well-equipped and very capable organisation.

NO LESS than 30,000 admission tickets to the Exhibition were sold by the Lloyd Memorial Home. Great success marked the efforts of Mr. H. F. Parker (the popular secretary of the Home) and his colleagues with regard to the "lucky dip" scheme. During the course of the Exhibition some 20,000 of these 1s. "lucky dips" were drawn, as many as 3,000 of them being disposed of in one day. The honour of "opening" this useful scheme at Islington, it may be mentioned, fell to Col. Lawson, whilst the *Daily Telegraph* contributed very largely to the cost incurred in the erection of the Lloyd Memorial stand in the Gallery.

Pensioners' Day at the Exhibition.

About 800 pensioners—men and women—of the Printers' Pension Corporation were entertained to a tea and concert by the Exhibition management on Thursday in the Princes Gallery. Sir Herbert Morgan, K.B.E., who presided, was accompanied by his daughter, Miss Gwenyth Morgan, and the Hon Mrs. St. Aubyn.

Mr. J. Mortimer, O.B E., secretary of the Corporation, introduced Sir Herbert to the large gathering as the president of the anniversary festival in November next.

Sir Herbert Morgan said he was delighted to be present. A paragraph in the Corporation's annual report told him of the large number of pensioners to which that organisation was responsible. It was quite another thing to witness them in the flesh, and he described it as a moving human spectacle. Continuing, Sir Herbert said he thought that printing was the greatest force in the cause of humanity, the re-creation of civilisation and modern business. The objects of the Corporation were the granting of pensions and the maintaining of permanent residences for aged and infirm printers and widows; the education and maintenance of orphan children, and the granting of relief to the children of printers killed in the war. There were at present 950 aged printers and widows receiving pensions, and among them was distributed annually the sum of £23,000.

Mr. C. J. Drummond proposed a vote of thanks to Mr. Bridges and the Exhibition authorities for the hospitality accorded to the company.

Mr. Bridges suitably replied.

As a souvenir of the visit of Miss Gwenyth Morgan and the Hon. Mrs. St. Aubyn, bouquets were presented to the two ladies by three little children, daughters of a printer killed in the war, three of the 900 war orphans which the Corporation had promised to help.

It may be stated that since 1918 the War Orphans' Fund of the Corporation has distributed over £61,000, and in order that the Fund may be kept in being until the last child has reached the age of 15 another £50,000 is necessary.

In respect of the Pensioners' Day, Mr. G. H. T. Freeman writes us drawing attention to the wide usefulness of the Printers' Pension Corporation and the heavy demands upon its funds. "The Corporation," he recalls, "was founded in 1827, and received the Royal Charter of Incorporation in 1865, so that ere another Printing Exhibition is reached it will have passed its centenary of usefulness. It is national in its administration, and embraces every branch of the printing industry in its benefactions. True, up to the present, the lion's share of its funds has been built up in London, but, with print more and yet more extending into the provinces, more will be the need of building up a larger fund."

Mr. Freeman adds:—"Might I suggest it would be a gracious thing for the exhibitors at the Printing Exhibition to found an 'F. W. Bridges 1925 Pension' within the Corporation as a mark of gratitude for all Mr. Bridges has done for printers and printers' manufacturers?"

Trade Union Matters.

THE triennial delegate meeting of the Typographical Association will be held at Lowestoft next week, and a very long agenda has been prepared containing many propositions of importance to the trade.

TYPOGRAPHICAL ASSOCIATION EXECUTIVE.—The following have been elected to the executive council of the Typographical Association for the ensuing twelve months:—Messrs. J. Mellor, W. E. Tims, J. J. Atkins, W. Bottomley, W. H. Evans, H. J. Harvey, T. F. Roche, L. P. Bristow, G. W. Chuter, E. G. Yates, F. O. Roberts, W. Wesson, W. Colby, C. B. Parkin, S. Oaten, W. J. Vernon, C. N. Athey, C. Powis, H. T. Whitley, M. Hartney, G. Holmes and J. E. Baines. Mr. J. D. French and Mr. H. Skinner will continue as president and secretary respectively.

MR. T. DOVE, Sheffield, who for ten years has been a member of the executive council of the Typographical Association, has presented a bowling shield to the Association, to be known as the Dove Challenge Shield, to be competed for by teams representing the various groups of the Association.

Printers' Managers at the Exhibition.

Busy Week-End for P.M. and O.A.

Saturday and Sunday, May 23rd and 24th, were red letter days in the calendar of the Printers' Managers and Overseers' Association. Many London members together with a goodly sprinkling of provincial representatives attended at the Agricultural Hall on Saturday, where, besides inspecting the Exhibition, they held the Association's biennial delegate meeting and several social functions, whilst Sunday provided opportunity for a delightful charabanc drive through the Epping Forest district.

The delegate meeting commenced at 9 30 a.m. and those whose duty it was to be present were busily engaged all the morning. Meanwhile, the excellent arrangements made, and the assistance given, by officers, stewards and members enabled the others to make the most of the day's opportunities. Ladies were taken during the morning for a motor drive round London's shopping centre, and a party numbering about 100 ladies and gentlemen paid a visit to the London School of Printing, where Mr. J. R. Riddell, the principal, showed them over the School and received many congratulations upon the scope and efficiency of the provision made for the technical education of those connected with the printing and allied trades.

The Luncheon.

About 150 members and ladies assembled for luncheon in the Grand Saloon of the Agricultural Hall at one o'clock, when Mr. F. W. Bridges and his son, Mr. Kenneth Bridges, were the principal guests of the Association. In the chair was Mr. R. H. Berry, president of the Association.

When the time came for speeches, Mr. Berry proposed the toast of "The Exhibition Organiser," and gave very cordial expression to the Association's appreciation of Mr. Bridges' kindness to the Association, particularly his having provided them with a place in the Gallery which they could use as a rendezvous for meeting each other and for missionary work on behalf of the Association.

Mr. Bridges, in the course of his reply, referred to a 27 years' acquaintance with the Association, and recalled that this was the seventh occasion on which he had met them in similar circumstances. He bore testimony to the progress made by the P.M. and O.A. and the many fine men who had served the Association in official capacities. He said, too, that in the course of his travels abroad he had found evidence that firms in all parts of the world were looking to the P.M. and O.A. to provide men capable of running their printing offices.

The president next said he had a duty to perform which had been kept more or less a secret—to present miniature presidential badges to past presidents of the Association. Remarking that he was the eighth president, Mr. Berry recalled the names of his predecessors in office: Messrs. Charles Morley, R. J. Davis, C. J. Gray, J. C. Pugh, E. H. Berryman, A. E. Jarvis, and S. M. Bateman—to all of whom he said they were indebted for their valuable services.

Messrs. Pugh, Berryman, Jarvis and Bateman were present to receive their medallions at the hands of the president, and each made brief response in accepting the decoration.

Mr. Kenneth Bridges, in proposing the toast of "The Association," spoke in very high terms of the importance of printers' managers to the Exhibition, and of their sound knowledge and judgment in respect of all that the exhibitors and salesmen had to offer. He coupled with the toast the name of the general secretary, remarking that the hard work and courtesy which Mr. Whittle had shown had made it a pleasure to be associated with him.

Mr. Whittle was given an enthusiastic reception in making brief response on behalf of the Association.

Mr. A. H. Wilson proposed the very popular toast of "The President," and Mr. Berry's reply brought the luncheon to a close.

Tea and Concert.

The day's big function from a numerical point of view took place in the evening, when something like 700 ladies and gentlemen assembled for high tea and concert in the Prince's Gallery. At tea the visitors were the guests of Mr. F. W. Bridges.

Mr. Berry, the president, thanked Mr. Bridges on behalf of the Association for the generosity shown towards them, and Mr. Bridges, in reply, remarked further upon the increasing importance and usefulness of the P.M. and O.A.

Though the concert occupied most of the rest of the evening, a little brief speech-making was interspersed.

The President proposed "Our Provincial Centres," mentioning that the Association had altogether nine Centres, whose membership now totalled almost as much as the membership of the Parent Association. They had also a goodly number of members overseas. All the Centres were well represented that day, and they also welcomed amongst them visitors from abroad. Mr. Berry added that it had been agreed, in order not to occupy too much time, that only two provincial representatives would reply, namely, Mr. W. E. Wall (president of the Liverpool Centre) and Mr. R. N. Stuart (vice-president of the Edinburgh Centre).

Messrs. Wall and Stuart made suitable responses, complimenting London on the kindness shown and the generous hospitallty provided.

To Mr. Wilson again fell the proposing of the toast of "The President," which was received with musical honours, an extra cheer being given for Mrs. Berry. Mr. Berry briefly responded.

Mr. Whittle proposed the toast of "The Stewards," to whom he said they were largely indebted for "a perfect day." He expressed the thanks of the Association to all who had assisted in making the day's proceedings so successful.

Mr. Paul made response on behalf of all the stewards.

A very excellent concert programme was submitted by Miss Gertrude Mayo, who also acted as accompanist. The following artists contributed: Miss Doris Smerdon (contralto), Mr. Robert Easton (bass), Mr. Jack Salisbury (violinist), Mr. Rex Harold (humorist), Miss Gwen Lewis (songs at the piano), Miss Beatrice Betts (soprano), and Mr. Harry Speller in his living marionette entertainment and humorous songs.

The entertainment was immensely enjoyed, all the performers receiving repeated encores, and it was at a late hour that the company dispersed, after the very hearty singing of "Auld Lang Syne."

The Sunday Outing.

At 10 a.m. on Sunday about a hundred ladies and gentlemen set off from the National Hotel, Russell-square, for a motor drive to places of interest in the Epping Forest district. Five motor coaches conveyed the party through Wood Green, where attention was drawn to the Printers' Pension Almshouses, and the journey proceeded by way of Enfield to Forty Hill, where opportunity was provided to dismount and enjoy a walk through Theobalds Park, the scene of old Temple Bar, and thence to Waltham Abbey. The history of Temple Bar and the surrounding neighbourhood was recounted to the party by Mr. S. A. Dawson. Luncheon was enjoyed at the King's Oak Hotel, High Beech, and the return made via Chingford. The National Hotel was reached again for tea at about 3 45, after which the rest of the evening was occupied in seeing visitors off at their various railway termini.

Only one opinion was heard of the week-end's proceedings—that they were an immense success from all points of view.

"COST OF FREIGHT TRANSPORT BY RAILWAY."—This is the title of a very useful little book written and published by Mr. F. W. Rogerson, 27, Pembroke-place, Liverpool. The problem of transport charges is one of no small difficulty and of very great importance. With a clearer knowledge of the subject it is believed that those using the railways can effect considerable economies. Mr. Rogerson, therefore, performs a valuable service in examining the elements of railway operating expenses and describing methods of procedure in the development of a cost accounting system. The book is published from the address given at 4s. 4d. post free.

MANAGERS & OVERSEERS' ASSOCIATION

Day at the Agricultural Hall.

The official visit of the above Association to the Exhibition as the guests of the management took place on the 25th ult., there being a very good muster of the members and their ladies. After an interesting itinerary had been made of the many exhibits, tea was served in the Barford Saloon, the visitors being warmly received by Mr. F. W. Bridges. This gathering afforded a welcome opportunity of cementing friendships and indulging in social intercourse.

The company was presided over by the president of the Association, Mr. A. Chadwell (United Newspapers), and there were also present: Messrs. J. Black (Spottiswoode and Ballantyne), W. Bullett (Walbrook and Co.), W. Bishop (Badoureau and Jones), W. M. Forsyth (Cassell's), Glen Steel (Jubb's), A. H. Mundey (Fry's), W. J. Light (Wm. J. Light and Co, Ltd.), Harry Williams (H. Williams and Co.), W. H. Longley (C. S. Yeates), and G. W. Sharvell (Amalgamated Press).

At the conclusion of a much-appreciated meal Mr. Chadwell, on behalf of the Association, moved a vote of thanks to Mr. Bridges and the organisers of the Exhibition for the kind hospitality extended to them. Referring to some of the exhibits which touched the every-day work of the members, the speaker welcomed Mr. Mundey (Fry's Metal Foundry) who had at different times given them several lectures of an interesting character. Then there was Mr. Jubb, who he was especially pleased to see at the Exhibition after his recent illness. Though Mr. Jubb was not present on that occasion he was glad to welcome the London manager of the firm, Mr. Glen Steel. Then they had the "L. & M.," who had previously been showing the Senior and Junior, and had now on the market the Pony Autoplate. He would not go into the capabilities of these appliances, but they were important considerations to their members, and he hoped they would all pay due attention to them. Then there was Mr. Light, another member of the Association and one of the pioneers of the dry flong. When that gentleman introduced to them the Winkler Casting Machine they viewed it with a certain amount of suspicion. Now the Winkler was amongst them, and he felt confident it had come to stay. Lastly there was their friend Mr. Harry Williams. He supposed the reason why he was not exhibiting was because his appliances were so well known. However, many of Mr. Williams' machines were to be seen on several of the stands.

Mr. J. Black seconded in a humorous speech.

Mr. Bridges, in replying, said he never felt happier than when he had members of the trade around him. Four years seemed a long time to look forward to, but he was already anticipating with delight the next Exhibition in 1929, when he hoped again to see them all present, but in increased numbers.

The remainder of the evening was spent in further examining the big array of machinery on exhibition.

The Monthly Meeting.

The May meeting of the Association was held on the 19th ultimo at the usual headquarters, St. Bride-lane, E.C.4, Mr. A. Chadwell presiding over a moderate attendance of members. The minutes of the previous meeting having been carried, Mr. Chadwell, on behalf of the members, expressed pleasure at the presence of Mr. R. Ryall, who had recently recovered from a serious illness. Other items considered included a letter from Mr. J. R. Riddell relating to the Association and the proposed trade scholarship scheme. This matter was left to be dealt with after a fuller explanation had been obtained of what exactly was required of the Association. The remainder of the evening was occupied in a useful discussion on questions of importance to the members.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Cleveland" and "Camco" series. A Folder for every need, from Eight Crown down to Demy Folio.

OFFSET MACHINES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, makers of "Ensign" Super-Offsets in all sizes for Sheet or Reel feed, in One, Two or Three Colours for Perfecting.

PAPER BAGS AND CARRIER BAGS.

STONEHOUSE PAPER AND BAG MILLS, Stonehouse, Glos., for all classes of Paper Bags, printed and plain. Keenest Trade Prices.

PAPER FEEDERS.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Camco" (Spiess Patents) Automatic Feeder.

CROSS PAPER FEEDER CO., LTD., 92, Fleet Street, E.C.4. Manufacturers and Sellers of the Cross Patent Automatic Feeder.

PRESS BLANKETS.

LIGHT & CO., LTD., W. J., 36-38, Whitefriars Street, London, E.C.4. 'Phone; Central 3839. "LIGHT'S-EVERWEAR" Press Rubbers. Oil and Ink-Proof and Reversible.

PRINTING METAL MANUFACTURERS.

FRY'S METAL FOUNDRY, Holland Street, Blackfriars, London, S.E.1. Branches at Manchester, Bristol, Glasgow, Dublin. "Fryotype" SERVICE, *i.e.*, Prompt Dispatch, Superlative Quality, Competitive Prices in Printing Metals, Spacing Materials and Melting Equipment.

PRINTING PRESSES, ETC.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Kelly" High Speed two rev. presses.

ROTARY WEB PRESSES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. NEWSPAPER (Speciality) & MAGAZINE ROTARIES.

ROTARY WEB PRESSES.

HOE & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Telephone: Hop 4028-9. Telegrams: Expugnator Sedist, London. Cables: Hoe, London.

LARGEST MANUFACTURERS OF HIGH SPEED ROTARY NEWSPAPER AND MAGAZINE PRESSES. Patentees and Suppliers of Automatic Ink Pumps.

STEREO AND ELECTRO PLANTS.

HOE, & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Tel.: Hop 4028-9. Telegrams: Expugnator-sedist, London. Cables: Hoe, London. Complete lines of Rotary and Flat Stereo and Electro Plants.

STEREO.

DIXON & CO., LTD., L. S. 38, Cable Street, Liverpool. **DRY FLONG** "DIXOTYPE" All British. Wet process; Tissue, Blotting & Backing.

STEREO DRY FLONG.

LIGHT & CO., LTD., W.J., 36-38, Whitefriars Street, London, E.C.4. 'Phone: Central 3839. "IDEAL" Hand-casting Dry Flong and "CLEARTYPE" Autoplate Dry Flong.

STEREOTYPING MACHINERY, ETC.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. ROTAPLATE (Reg. Trade Mark) and ROTASHAVER Casting and Finishing Machines.

LIGHT & CO., LTD., W.J., 36-38, Whitefriars Street, London, E.C.4. Sole Agents for the "WINKLER" Automatic Moulding Press, Automatic Plate Casting Machine, etc.

TRADE PUBLICATIONS.

BRITISH AND COLONIAL PRINTER AND STATIONER, THE. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. Founded in 1878, this weekly journal is the recognised medium for Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc. Its pages contain the latest improvements in machinery, descriptions of new processes, and commercial intelligence and current news. Subscribers get the paper for 52 weeks for 13s.

TRADE PUBLICATIONS.

BOOKBINDER, THE, forms a Monthly Section of the *British and Colonial Printer and Stationer*, and subscriptions are booked for these issues at the rate of 3s. 3d. per annum, including postage. Special contributions appear from the pen of leading authorities. Publishers: Stonhill & Gillis, 58, Shoe-lane, London, E.C.4.

DICTIONARY OF PAPER TERMS.—Definitions of the Terms as used in the Manufacture and Merchandising of Paper. Published in book form by the Lockwood Trade Journal Co., Inc., New York. Bound in cloth, 6 × 9, 87 pp. Price 7s. 6d. Copies may be had of Stonhill & Gillis, 58, Shoe Lane, London, E.C.4.

LITHOGRAPHIC TRADE REVIEW, THE. This forms the subject of a monthly section of the *British and Colonial Printer and Stationer*, and these issues are obtainable at an annual subscription of 3s. 3d. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

PAPER TRADE REVIEW, THE WORLD'S. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. This weekly journal established in 1879, gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. Annual subscription: 26s. plus postage (Inland, 30s. 4d.; Foreign and Colonial, 32s. 6d.)

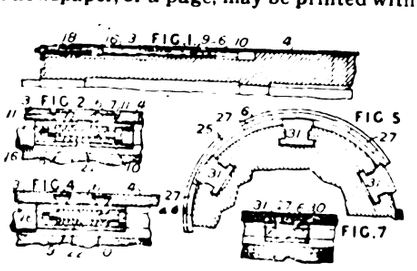
New Inventions

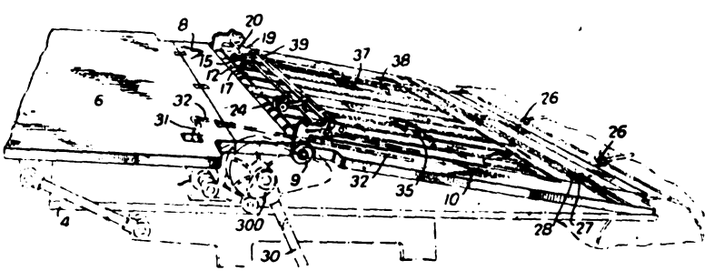
Securing Printing Plates.

Mr. J. Murray has patented an invention by which in devices for securing thin metal printing plates to their cylinders, of the kind in which detents engaging the edge of the plate are carried by a shaft mounted in a cavity in the cylinder and adapted to be rocked to tighten the plate, the detents are arranged radially to the cylinder and engage the plate at the circumference of the cylinder so that bending of the edge of the plate is avoided. Two similar clamping devices are arranged to clamp two plates C, and each device comprises a shaft A carrying a number of hooked detent fingers B, secured in recesses in the shaft by set-screws B_2, and engaging slots C^1 in the end of the plate. The shafts C are supported in plates D^1, fixed to the end of the cylinder, and have fixed to them pinions



E engaging pinions F freely mounted on pins H. Worm wheels G, fast to the pinions F, are engaged by worms K on spindles L provided with worm wheels M engaging screwed spindles N having squared ends N^1 to receive a wrench. By turning the spindles N the shafts A are rocked to tighten the plates C. To allow of adjustment of the plates C transversely of the cylinder, the shafts A are supported by sleeves D threaded into the plate D^1 and internally threaded to engage screwed parts of the shafts A. The external and internal threads of the sleeves are of different pitch so that upon turning the sleeves, the shafts A are adjusted in the direction of their length.

Printing Surfaces.



In this invention in the margin space adjacent a main printing plate mounted on a cylinder, is secured a marginal printing plate of the same length as the main plate around the cylinder whereby such space may be utlised for matter different from that carried by the main plate, or a double width page of a newspaper, or a page, may be printed with-

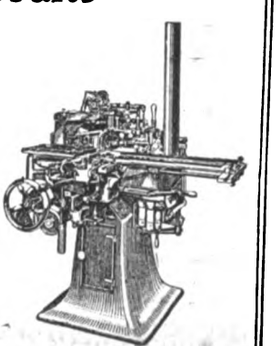
out a margin space. In one form, Figs. 1 and 2, the marginal plate 6 is formed with a bevelled rib 7 which engages with similar ribs 11 on clamping blocks 9, 10 forced apart by a spring 22 to release the plate 6. Main printing plates 3, 4 are bevelled to engage the outer edges of the ribs 11, and the plates 3, 4, 6 are clamped on the cylinder by a screw-actuated block 18 engaging the plate 3 if two plates are used, or engaging a rod 16 if only the plate 4 is used, to force the blocks 9, 10 together. The main plates may be extended over the ribs 11 on the blocks 9, 10 and the marginal plate 6 decreased in width as shown in Fig. 4. In another form, Figs. 5, 7, the plate 6 is provided with a central flange 25 which has widened and bevelled portions 27 adapted to engage correspondingly bevelled grooves 30 in blocks 31 when the plate is moved circumferentially of the cylinder. The blocks 31 are movable lengthwise of the cylinder to clamp the main plates. Messrs. R. Hoe and Co., Ltd., are the patentees.

Sheet-Feeding Mechanism.

Mr. H. T. Backhouse has patented a sheet-feeding mechanism of the kind in which the sheets are fed by hand from a feed table to a

preliminary registering device from which they are fed automatically over a continuation feed-table or its equivalent to devices for registering the sheet laterally and longitudinally for seizure by the grippers or like of a printing or other press; It is constructed as an attachment which can be applied to existing machines. A feed-table 6, is supported from the feed-board 4 of an existing machine, and is fitted at its front with an extension 8 over which the operator feeds the sheets to stops 17 mounted on an oscillating shaft 20 which is geared to a shaft 19 from which feed rollers 15 are supported. These rollers 15 are depressed to coact with a driven roller 9 as the stops 17 are raised to permit the advance of the sheets. The roller 9 drives endless tapes 12, and these tapes forward the sheets over a board 10 to the front stops 26 of an impression cylinder. The sheets are registered laterally against a side stop 28 by a reciprocating pusher 27 operated by a cam 300, lever 31, and rod 32. The shaft 19 is also oscillated by the cam 300, The shaft of the roller 9 is driven from the printing machine by a shaft 30 acting through variable speed gearing, which is arranged to slow down the sheets as they approach the stops 26.

Sheet Carriers.—The sheets are preferably pressed on to the tapes 12 by means of anti-friction rollers 35 mounted in arms on U-shaped rods 37 carried on rods 38 supported by a rod 39. The rods 37 are carried by sockets adjustable longitudinally of the rods 38, and are also laterally adjustable.



Sheet Guides and Smoothers.—The sheets are guided to the stops 17 by guides 24, and may be acted on by smoothers as they pass over the board 10.

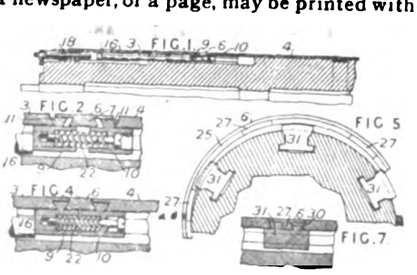
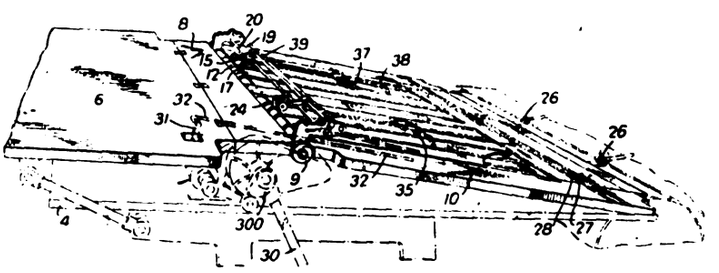
Securing Printing Plates.

Mr. J. Murray has patented an invention by which in devices for securing thin metal printing plates to their cylinders, of the kind in which detents engaging the edge of the plate are carried by a shaft mounted in a cavity in the cylinder and adapted to be rocked to tighten the plate, the detents are arranged radially to the cylinder and engage the plate at the circumference of the cylinder so that bending of the edge of the plate is avoided. Two similar clamping devices are arranged to clamp two plates C, and each device comprises a shaft A carrying a number of hooked detent fingers B, secured in recesses in the shaft by set-screws B_2, and engaging slots C¹ in the end of the plate. The shafts C are supported in plates D¹, fixed to the end of the cylinder, and have fixed to them pinions



E engaging pinions F freely mounted on pins H. Worm wheels G, fast to the pinions F, are engaged by worms K on spindles L provided with worm wheels M engaging screwed spindles N having squared ends N¹ to receive a wrench. By turning the spindles N the shafts A are rocked to tighten the plates C. To allow of adjustment of the plates C transversely of the cylinder, the shafts A are supported by sleeves D threaded into the plate D¹ and internally threaded to engage screwed parts of the shafts A. The external and internal threads of the sleeves are of different pitch so that upon turning the sleeves, the shafts A are adjusted in the direction of their length.

Printing Surfaces.



In this invention in the margin space adjacent a main printing plate mounted on a cylinder, is secured a marginal printing plate of the same length as the main plate around the cylinder whereby such space may be utlised for matter different from that carried by the main plate, or a double width page of a newspaper, or a page, may be printed with-

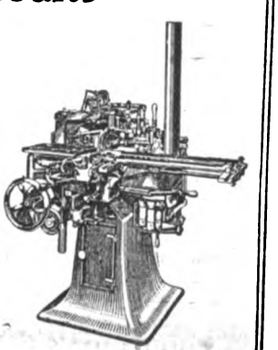
out a margin space. In one form, Figs. 1 and 2, the marginal plate 6 is formed with a bevelled rib 7 which engages with similar ribs 11 on clamping blocks 9, 10 forced apart by a spring 22 to release the plate 6. Main printing plates 3, 4 are bevelled to engage the outer edges of the ribs 11, and the plates 3, 4, 6 are clamped on the cylinder by a screw-actuated block 18 engaging the plate 3 if two plates are used, or engaging a rod 16 if only the plate 4 is used, to force the blocks 9, 10 together. The main plates may be extended over the ribs 11 on the blocks 9, 10 and the marginal plate 6 decreased in width as shown in Fig. 4. In another form, Figs. 5, 7, the plate 6 is provided with a central flange 25 which has widened and bevelled portions 27 adapted to engage correspondingly bevelled grooves 30 in blocks 31 when the plate is moved circumferentially of the cylinder. The blocks 31 are movable lengthwise of the cylinder to clamp the main plates. Messrs. R. Hoe and Co., Ltd., are the patentees.

Sheet-Feeding Mechanism.

Mr. H. T. Backhouse has patented a sheet-feeding mechanism of the kind in which the sheets are fed by hand from a feed table to a

preliminary registering device from which they are fed automatically over a continuation feed-table or its equivalent to devices for registering the sheet laterally and longitudinally for seizure by the grippers or like of a printing or other press; It is constructed as an attachment which can be applied to existing machines. A feed-table 6, is supported from the feed-board 4 of an existing machine, and is fitted at its front with an extension 8 over which the operator feeds the sheets to stops 17 mounted on an oscillating shaft 20 which is geared to a shaft 19 from which feed rollers 15 are supported. These rollers 15 are depressed to coact with a driven roller 9 as the stops 17 are raised to permit the advance of the sheets. The roller 9 drives endless tapes 12, and these tapes forward the sheets over a board 10 to the front stops 26 of an impression cylinder. The sheets are registered laterally against a side stop 28 by a reciprocating pusher 27 operated by a cam 300, lever 31, and rod 32. The shaft 19 is also oscillated by the cam 300, The shaft of the roller 9 is driven from the printing machine by a shaft 30 acting through variable speed gearing, which is arranged to slow down the sheets as they approach the stops 26.

Sheet Carriers.—The sheets are preferably pressed on to the tapes 12 by means of anti-friction rollers 35 mounted in arms on U-shaped rods 37 carried on rods 38 supported by a rod 39. The rods 37 are carried by sockets adjustable longitudinally of the rods 38, and are also laterally adjustable.



Sheet Guides and Smoothers.—The sheets are guided to the stops 17 by guides 24, and may be acted on by smoothers as they pass over the board 10.

(Continued from page 471).

The Printing of Paper Money.

The method of printing employed in the case of the Treasury notes is a combination of photogravure, offset lithography, and letterpress. Photogravure, which means printing from copper cylinders engraved by a photo-mechanical process, has been brought to a high degree of perfection by Waterlows and facilitates a rapid output of uniform quality. Every sheet of notes has to go through the machines several times—for the various printings and the numbering. The cutting up of the notes is done on special guillotines. It is a marvellous spectacle to see this huge installation of machinery devoted exclusively to one job, working with such speed, precision, and perfect synchronism.

Equally remarkable and interesting is the printing of the British postage and insurance stamps, the output during the last 12 months being over 7,492,000,000 stamps. These are printed from electrotype blocks on letterpress machines. This firm also does an extensive business in the printing of cheques for bankers and for private firms, which is carried on in a special factory.

The typographic method of printing stamps is not the only one employed by the firm. The finest stamps are plate-printed at their Finsbury works, and this method is generally preferred by foreign Governments. The perforating is done by rotary machines, which are found more suitable for paper that has been damped for printing. The plate printing at these works has been brought to the highest degree of perfection and is conducted on an immense scale. Their engraving department is well equipped with the latest machines for mechanical engraving. For the plate printing the firm has always built its own machines, and quite a large battery of them is in use. Some of the older ones print from flat plates, but the more modern are on the rotary principle, the inking and wiping being done automatically. As many as eight printings may be done on some notes, and through the blending of the colours 32 different shades may be counted on a single note. The properties of inks and papers have to be carefully studied, the more important inks being made in the firm's own works.

Stamp-Making.

Messrs. Thomas De La Rue & Co., Ltd., are engaged in security and stamp printing. The firm was founded in 1815 by Thomas De La Rue, a native of Guernsey, who was a printer and publisher of engravings and a man of great inventive faculties. In 1855 it was printing stamps and postal stationery for the East India Company, and this connexion has been maintained up to the present day with the Indian Government. About this date they also printed the higher values of stamps for the British postal service, and in 1880 the whole of the contract for British stamps was secured by the firm, which by that time had developed the typographic printing of postage stamps to a quality of technique which was unrivalled by any other firm. In 1884 the firm invented doubly fugitive or sensitive inks for preventing the removal of obliterations and written cancellations, and these were introduced into the printing of the stamps for the British contract. During the time this contract was held as many as 5,000,000,000 stamps per annum were printed by the firm. The firm has also executed postage stamps and banknotes either by typographic or plate printing in large quantities for the Crown Colonies and for numerous foreign Governments, and also some of the Treasury notes for the British Government. De La Rue's have during the past three years made great strides in the perfection and economy of direct plate printing, and have equipped themselves with the most up-to-date and efficient machinery and methods for the production of banknotes and other security documents. Their intention has been to make the house as famous for the highest class of plate printing as it has always been for the typographical process for security documents of all kinds.

Bradbury, Wilkinson, and Co., Limited, have always devoted themselves exclusively to security printing, and particularly engraved plate printing. Originally established in 1855 by Henry Bradbury and Robert Wilmot Wilkinson, the house has to its credit a long record of progress. Their works at New Malden, which have been specially erected for their business, cover about 7½ acres and stand on a plot of about 18 acres. The equipment is of the most up-to-date character and the engraving department is a model of its kind, equipped with the newest and most perfect machines. The firm have given great attention to the scientific problems underlying their business, and maintain a considerable research staff, with laboratories for chemical, physical, and mechanical testing of the inks, papers, and other materials used. A well-equipped photographic department is maintained for testing how far the products of the firm are likely to defeat the efforts of the counterfeiter and forger. The electro-chemical department for depositing copper, nickel, and other metals is of a highly efficient character. As an instance of the completeness of the firm's organisation, it may be mentioned that a laundry is maintained for washing the wiping and other cloths used on the machines. The organisation for checking and control is complete and perfect. The firm are continuously doing a large amount of work in all forms of security printing for a great many foreign Governments and for private clients all over the world.

Cheque Printing.

Messrs. Blades, East and Blades, Ltd., are an old firm of security printers, dating from 1821 and specialising very largely in cheque printing. They have made great progress of late years in the application of modern processes of photo-lithography and photogravure to all kinds of printing, and the work they do is in many respects equal to the finest direct plate printing. Some very beautifully printed cheques have been executed by the firm in photogravure, and there is a growing demand for this form of printing. A group of 12 machines of one size is constantly running on cheque printing, besides many auxiliary machines. Invariably two printings are required, but some of the work runs into three or four colours. The firm specialise in the use of fugitive inks—that is to say, inks which will not only resist erasure or alteration of the printing, but also prevent tampering with the writing on the cheques. A great feature of their works is their modern fleet of rotary offset presses. Great attention is given to the quality of the paper, which is of a special quality selected by the firm for certain features which particularly adapt it for cheque printing.

Messrs. Harrison and Sons, Limited, have given special attention to stamp printing by a modified process of photogravure to which they have given the name of Colagravure. By this method they have produced the present issue of Egyptian stamps, as well as issues for some other governments, and the results have been greatly admired and appreciated by philatelists. The firm also produce large quantities of stamps by surface printing from lead-moulded electros.

Mention must also be made of Messrs. Perkins, Bacon & Co., Limited, a very old established firm of engravers and plate printers, who were the first to produce stamps by plate printing, by the method to which they gave the name of "Siderography." The business was started in 1819 and Jacob Perkins, one of its founders, was the first to introduce the method of impressing the engraved stamp design into steel plates by means of a hardened steel roll in the transfer press. The firm printed by this means the first English postage stamps—the old black and afterwards the red of the Victorian era.

Specialized Work.

The firm of Thomas Macdonald & Sons, Limited, which was established in 1875, occupies a unique position in that it engraves plates for all forms of security printing for firms who do not employ their own staff of engravers. They have all the machinery such as is employed in the engraving departments of the large houses, and a skilled staff to do the finest work. Foreign governments and private firms all over the world frequently send to this firm for plates which are too intricate or difficult to be done locally.

This article would be incomplete without a reference to the work of printing the postal orders and pension forms, which is done by Messrs. McCorquodale and Co., Ltd., in a special factory at Wolverton. These documents are printed typographically from electrotype blocks, and a great amount of special machinery has had to be devised for dealing with the huge output.

The World's Printing Trade

NEARLY forty years ago "The British and Colonial Printer and Stationer's" Special Quarterly Export Issues were started, to cover the World's Printing Trade.

These special issues were almost instantaneously successful, and to-day "The British and Colonial Printer and Stationer" stands pre-eminent as the printing trade journal, carrying the message of British Print throughout the world.

Without exceeding the bounds of modesty, we can legitimately claim that this journal has made the export departments of certain firms, whilst it has increased the overseas business of its advertisers generally.

It is not for us to presume to instruct supply houses their method of doing business—we can only give you the experience of our advertisers:—

> "It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your Journal has contributed towards this export business.—C. B., Ltd."

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	East Indies.	Canada.
India.	West Indies.	United States.
South Africa.	China.	South America.
	Japan.	

The next Special Export Issue will be published on June 18th, 1925.

One of our representatives will be pleased to call upon you at your office, in your time and at your convenience. He is entirely at your disposal, and a conversation can do no harm.

Write us to-day!

VOLUME 96. NUMBER 24. [REGISTERED AS A NEWSPAPER.] LONDON: JUNE 11, 1925. EVERY THURSDAY. PRICE TWOPENCE.

Achievement

THE Assouan Dam is perhaps the greatest achievement of human endeavour to harness the resources of nature. History is crowded with the records of great things done for national well-being. But equally great are achievements in the smaller spheres of life. Around the corner lurks the romance of accomplishment.

Back in '48 Benjamin Winstone opened a little workshop in Wine Office Court and started making printing inks. That was seventy-seven years ago, and by dint of hard work, service and fair dealing the little one-room laboratory of '48 now comprises two large modern factories.

Members of the craft pay tribute to this record of achievement by justly acknowledging the superiority and high quality standard of Winstone productions, which include Printing Inks, Rollers, Roller Composition, and time-and-cost-saving Sundries and Specialities (Litho and Letterpress).

PROGRESS SERIES: No. 5.

Before the construction of the Assouan Dam the Nile lost by evaporation alone 100,000,000 cubic yards of water in each twenty-four hours. This masterpiece of engineering is the product of Sir William Wilcox's fertile brain. The quantity of water retained by the dam is over one billion cubic yards, which roar with a thunderous noise through 180 enormous sluices to irrigate the agricultural lands of the Nile.

The Significance of Printing.

A Talk Broadcast Recently in the U.S.A. by Mr. Frederic W. Goudy, Well-known Type Designer.

Everyone knows what printing is. As Hamlet said of flute playing, "'Tis as easy as lying." Stamp inked types upon paper, and it is done; but in the few minutes allotted me, I would urge upon you to think of a deeper significance of this familiar and useful craft, to attempt to get at the inner soul of the matter.

Printing, the art preservative of all arts, the wonderful art that can recall all other arts, yet forget itself! What endless and bootless discussion would have been saved if Gutenberg had but thought to add to the book usually attributed to him—the 42-line Bible—the information that it actually was his work, his types, and where and when printed! If only some of his leaden characters that made "the invisible thoughts and imaginations of the soul visible to all" had, by some lucky chance, been preserved for one's examination; or Jenson's white letter, the beauty of which is but poorly exhibited by his weak impressions; or if some early writer on printing, at a time when printing was in its swaddling clothes, had but taken thought to speak particularly of the designs of those early craftsmen, what a service he would have rendered us!

The story of types and printing is the story of brave craftsmen to whom we owe the best we have in art and science, literature and social concord. Over these men time has spread the glamour of true romance. It would be an easy matter to permit the imagination to run riot upon the far-reaching effects of the art without which education in a democracy would be impossible, the art which preserves the best of human thought in forms of imperishable beauty.

"Thought is the property of him who can entertain it and of him who can adequately place it." The brick stamps of the ancient Babylonian fore-shadowed movable types, yet it is none the less honour to Gutenberg, who probably was the first to conceive the principle of casting letters in metal, that some germ of the principle itself was known and in use centuries before him.

His chance thought, straying through an idle reverie, a dream most golden, became the author and originator of power unequalled by any other single force. Now by printing we are enabled to call loudly: "Ye traders who come to buy, pause here! We have fabrics of Asia and fabrics of Phoenicia, richly dyed in scarlet and crimson and azure, with golden ornaments sewn upon them by many slaves. We have silver boxes of Persia and carved ivory from the great South Country. The sun has mellowed the colours of our precious stones and all the tints of the ocean are shown in this wonderful pearl which the slaves of the blue sea died in getting."

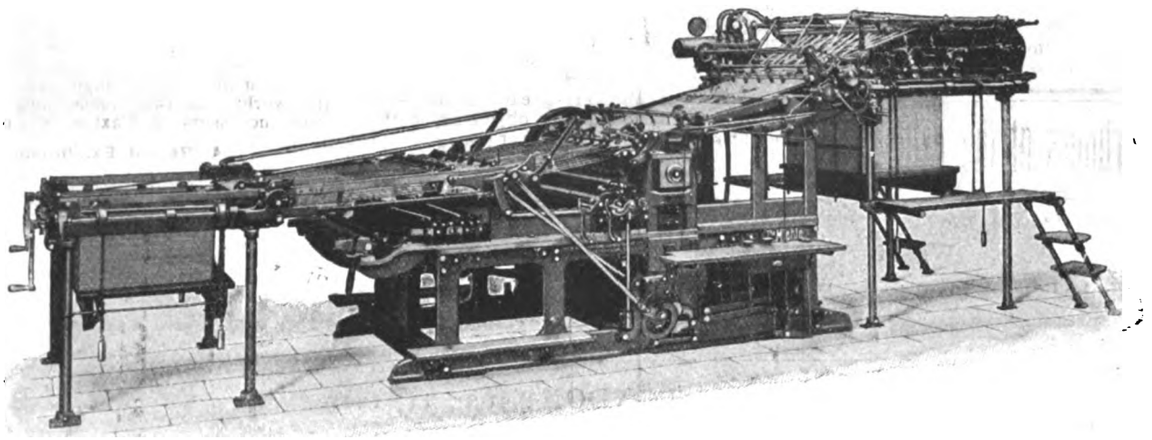
In the natural sequence of all the events in the world's history, printing constitutes an important step. It came as a simple, an inevitable, comparatively insignificant corollary of writing which Carlyle said was the most miraculous of all things man has devised. With the art of writing the true reign of miracles commenced. The history of writing is, in a way, the history of man, since in it are bound up the entire development of human thought, of expression, of art, of inter-communication and of mechanical invention.

The time was ripe!

To secure some easier and quicker means for the duplication of books than the slow copying by the scribes was the incentive that stimulated the imagination of practical men. A renaissance of learning had set in that spread from Italy throughout Europe. Writing was beginning to exhibit signs of debasement, and already had passed the period of its finest development. Many men of learning had appeared and the intellectual activity of the time stirred the creative genius of Gutenberg, and it was his fruitful and persevering efforts from 1440 to 1450 that gave us printing. Printing was the new and more rapid instrument by which the impending Revival of Learning was to find expression, an apparatus by which the symbols of language were utilised to convey thought.

"In books we find the dead as it were living." Books constitute the world's memory in visible form; they are steadfast, unpresuming friends and silent counsellors. Martin Luther said every great book is an action, and every great action is a book. Books, too, are the windows through which the soul looks out. But to-day books are so common, so familiar to all, that they are accepted quite as matters of course, and few give any thought to their evolution to their present form.

When printing came, valuable truths were nourished to maturity, and transmitted to bless or instruct posterity. Printing put the world's inheritance of the knowledge of classic Greek and Rome beyond the reach of further waste.



But, better yet, printing is the surest method of fixing the great thoughts which arise in the minds of great men, transmitting those thoughts to the last periods of time. Printing puts us in communication with the minds of the past, and preserves the thought of to-day for future generations. But printing may do even more than give permanency to ideas and convey the knowledge that books enfold. Reading an ugly book is no more profitable to good taste than reading trash is profitable to the mind. Printing need not be ugly; it may give pleasure by a beauty of its own, a beauty that will breathe on dead types and bring them to life, and by that beauty enable us to see in the author's words a deeper sense than his mere words suggest. Therefore, if printing includes a degree of beauty in itself and presents the author's thought in monumental form suitable to its magnitude, its beauty makes visible man's admiration of that thought.

The printing of a mere advertisement or a simple narrative should no more be given the form or treatment of an epic poem or the form of a dignified essay than a farm house should be built to look like a city mansion, or a cottage be given the air and character of an ornate villa. Each has its own peculiar beauty, and to borrow an aspect from one for use of the other is but to debase and falsify it in character and expression. It is no more fitting to copy the arrangement, types and "feeling" of an old

The Miehle

WITH AUTOMATIC PILE FEEDER AND A PILE DELIVERY

The Miehle can now be supplied, as here illustrated, complete with the Pile Suction Feeder (with sheet-turning arrangement for perfecting) and Pile Delivery. Full particulars of these additional units will be supplied on application.

An important feature of the Feeder is an arrangement whereby it is unnecessary to disturb the pile of sheets when printing the reverse side. To feed the sheets and turn them over, the pile is put into the Feeder with the leading edge towards the outer feed roll. By this means the sheets are automatically reversed and come down on to the feed board the right way up. Thus there is no re-piling or turning over of sheets by hand, or re-piling or turning of the sheets when working a second or third colour on either side.

It is suction fed, the pumps for creating the vacuum for the suckers and the compressed air for the blowers being of the rotary type, driven by a small independent motor. Each sucker head carries two suction arrangements, two blower arrangements, and two sheet grips. A sucker head is also carried on the control for the height of the pile.

This Feeder, which is carefully designed and well constructed, is provided with safety devices which include multiple-sheet and no-sheet trips. The pile is automatically controlled, so that it is kept always at the right height for feeding.

The Pile Delivery deposits sheets clear of the machine, printed side up or down, on to a board or truck which automatically adjusts itself to the correct level throughout the run. The sheets as they fall on to the Delivery are automatically knocked up and keep the pile even on all sides. A blade is supplied for fitting over the centre of the board or truck for dividing slit sheets. Special provision is made for preventing the sheets from curling on their passage down the delivery tapes. The delivery can quickly be altered from face-up to face-down, or vice versa. Trucks for the removal of the pile can be wheeled in from both sides of the delivery.

The Miehle, the Pile Feeder, and Pile Delivery are manufactured by

book, or one produced under different environments and conditions of life and times, for present-day use, than it is to copy an Italian villa and erect it on a congested city street.

In the hand of an artist, printing may utilise its own beauty to the end of communicating a fine or beautiful thought. When the words of the great writer are so richly clothed that the raiment becomes both an interpretation and a tribute to their worth—when the typography itself is so delightful that we may dwell on it with pleasure for its artistic beauty, printing becomes more than a mere craft: it becomes an art—an art that appeals to the imagination through the eye, a means even to higher ideals.

Master Printers at the Exhibition.

Interesting Day for L.M.P.A. Members.

As already briefly reported, members of the London Master Printers' Association paid an official visit to the Printing Exhibition at the Royal Agricultural Hall on Wednesday, May 27th. A considerable number put in an appearance and found much of interest in the various exhibits. Not least attention was given to the specimens of printing exhibited in connection with the London Inter-District Printing Competition, which were hung in an annexe to the Gallery. Not only lay visitors but master printers themselves admired the very fine work which had been turned out from the printing offices in London, the taste and skill represented in all the work being very notable.

Meeting Competition.
